### Risk and Reward Profile

#### Additional key risks

The risk indicator reflects market conditions of recent years and may not adequately capture the following additional key risks of the Sub-Fund:

- **Operational risk:** Losses may occur due to human error or omission, process errors, system disruptions or external events.
- **Derivatives risk:** Derivatives create leverage in the Sub-Fund and may cause movements in the value of the underlying investments to amplify gains or losses to the Sub-Fund.
- **Counterparty risk:** Losses may occur due to the failure of derivative counterparties to the Sub-Fund and where collateral arrangements are insufficient to cover the risk.
- **Liquidity Risk:** Losses may occur if adverse market conditions affect the ability to sell assets at a certain time and for a reasonable price.
- **Emerging Markets Risk:** Some of the countries invested in may carry higher political, legal, economic and liquidity risks than investments in more developed countries.

#### What does this risk indicator mean?

The above risk indicator ranks potential risk and reward and is based on medium-term volatility (how sharply the Sub-Fund's actual or estimated unit price has gone up and down over five years). Historical data, such as that used in calculating this synthetic indicator, may not be a reliable indication of the future risk profile of the Sub-Fund. The lowest category does not mean a 'risk-free' investment. The Sub-Fund's risk indicator is not guaranteed and may change over time. For un-hedged currency classes, exchange rate movements may affect the risk indicator where the currency of the underlying investments differs from the currency of the unit class.
