## **Investment Manager's Report**

### **Fidelity Euro Bond FAM Fund (the "Sub-Fund")**

The fund posted negative returns and underperformed the index during the year 2022. The fund's term structure positioning is primary detractor whereas its credit strategy supported the performance. Markets battled with soaring inflation, unprecedented interest rate hikes by central banks and a subsequent synchronised slowdown in global economic activity. Russia's invasion of Ukraine, supply chain disruptions, an energy crisis in Europe and COVID-19 related lockdowns in China earlier in the year exacerbated an already challenging macro backdrop. The continued hawkish rhetoric of US Federal Reserve and the European Central Bank led to several hikes in 2022, with a clear prioritisation of inflation at the cost of growth. In turn, benchmark 10-year sovereign yields touched multi-year highs and government bonds posted negative returns. In this regard, the fund's tactical long USD duration dragged the performance. Furthermore, the overall long EUR duration also detracted from gains, however the fund's favourable position along the 1y to 5y part of the EUR curve helped offset the losses. In addition to this, the short JPY duration also aided the returns marginally. We entered the year with an underweight credit beta position which aided the returns when spreads widened. The shift to overweight credit beta helped the fund generate alpha in Q4 2022 when spreads tightened on account of improved risk sentiments. At a sector level, the overweight exposure to Banks & Brokers, Insurance, Property, Basic Industry, Capital goods, Consumer Non-Cyclical and Utility supported the performance. Moreover, the underweight allocation to Tech & Communication also added value, whereas underweight exposure to Treasury and Quasi Sovereign detracted from performance. The underweight position in government bond of Netherland, France and Portugal detracted from gains. In terms of ratings, the underweight exposure to AA-rated credits weighed on the gains whereas the allocation to AAA, A and BBB-rated credits supported the performance. From an issuer perspective, the overweight stance in Allianz, AXA SA and Thames Water Utilities added value. Conversely, the exposure to Credit Suisse Group costed the fund some performance in relative terms.

## **Investment Manager’s Report (continued)**

### **Fidelity Euro Short Term Bond FAM Fund (the “Sub-Fund”)**

The fund posted negative returns and underperformed the index during 12-months ending December 2022. The fund’s term structure positioning primarily contributed to the alpha generation whereas its credit strategy detracted from gains. Markets battled with soaring inflation, unprecedented interest rate hikes by central banks and a subsequent synchronised slowdown in global economic activity. Russia’s invasion of Ukraine, supply chain disruptions, an energy crisis in Europe and COVID-19 related lockdowns in China earlier in the year exacerbated an already challenging macro backdrop. The continued hawkish rhetoric of US Federal Reserve and the European Central Bank led to several hikes in 2022, with a clear prioritisation of inflation at the cost of growth. In turn, benchmark 10-year sovereign yields touched multi-year highs. In line with the backdrop, the tactical long USD duration detracted from gains. However, the fund’s short EUR duration supported the returns and more than offset the losses from positioning along the USD curve. At a sector level, the overweight exposure to Banks & Brokers, Basic Industry, Capital goods, and Consumer non-cyclicals supported the performance. In addition to this, the underweight allocation to Energy and Utility also added value. Conversely, the underweight allocation to Quasi Sovereign and Treasury detracted from gains. In terms exposure to governments bond, the underweight allocation to Spanish, Italian and French government dragged the performance. Within ratings, the underweight allocation to AAA and AA-rated credits were the primary detractor, whereas the exposure towards A and BB & below rated credits contributed to the performance. Overall, the exposure to banking has contributed, as despite the rally in Financials, the spread verses corporates remain attractive and thus, our significant overweight in issuers like ABN AMRO, Commerzbank, and Deutsche Bank contributed to the performance. The underweight stance in Italian and French government bonds also weighed on the alpha generation. From an issuer perspective, the exposure to banking credits including ABN Amro, Commerzbank, Deutsche Bank and Standard Chartered contributed primarily, on account of favourable spreads against the corporates and we had significant overweight in these credits. Conversely, the exposure to Credit Suisse Group and Blackstone Property Partners costed the fund some performance in relative terms.

## **Investment Manager’s Report (continued)**

### **Fidelity Global Dividend FAM Fund (the “Sub-Fund”)**

Global equity markets posted negative performance in 2022 after three consecutive years of strong absolute performance. In 2022, markets had their worst yearly decline since the Global Financial Crisis of 2008. The year began with inflation surging higher along with supply chain issues as Covid-19 cases finally came under control in most parts of the world except China which was under a strict lockdown policy until the last months of the year. Europe’s energy crisis emerged following Russia’s invasion of Ukraine. Major central banks increased rates aggressively, often by more than expected, as they attempted to contain inflation. Against this backdrop, all sectors except energy ended in negative territory in US Dollar terms, with consumer discretionary and communication services emerging as the bottom performers. The fund’s bias towards the insurance industry contributed the most to the relative performance. Additionally, the fund’s limited exposure to software & services and media & entertainment stocks enhanced gains. Conversely, the fund’s lack of exposure to energy stocks held back gains. At a stock level, the fund benefited from the lack of exposure to large-cap growth companies, namely Amazon, Tesla and Meta, whose valuations contracted in light of rising interest rates. Insurance companies Progressive Corporation and Munich Re were notable contributors to returns. The former reported strong third-quarter results and the management believe that they have now achieved rate adequacy and are positioned for growth as competitors continue to raise prices. The latter reported third-quarter results that were in line with expectations. It increased its guidance for gross premiums in its reinsurance line of business as a result of strong performance in the first nine months of 2022. German exchange Deutsch Boerse benefited from positive broker commentary that cited strong volume data for Q3, which is likely to drive consensus earnings upgrades. It is well-positioned to benefit from rising interest rates and elevated levels of gas trading. Some of the relative outperformance was offset by the holding in Intel. Its shares slid given ongoing capital expenditures to transform the competitiveness of the business in light of an industry-wide downturn. However, Intel generated solid results and made substantial progress on its product and process execution during the third quarter. Shares in UK-based motor insurer Admiral were weak despite stronger pricing, which still needs to catch up with high levels of inflation. European capital goods company Sandvik declined on concerns around a potential recession in Europe. Nonetheless, it witnessed continued strong demand across the board for its products and its supply chain and pricing were effectively handled.

## **Investment Manager's Report (continued)**

### **Fidelity World FAM Fund (the "Sub-Fund")**

Fund (Gross): -16.9%. MSCI World Index (Net): -18.0%. W.e.f. January 2022, the Fidelity World FAM Fund is being managed by Jamie Harvey. The manager's core bottom-up stock picking approach is anchored in the belief that markets are semi-efficient. He believes the companies addressing the greatest environmental and social challenges stand to earn higher and more durable returns over time. These companies enjoy better growth opportunities and lower long-term risk profiles, and therefore have the potential to deliver strong returns to shareholders while also being a driving force for positive societal change. Within these ESG leaders, the PM then looks for companies where market expectations over 3-5 years are too low i.e., duration (companies with sustainable competitive advantages and pricing power) and change (through accelerated structural and cyclical change). This concentrated global equity strategy has a quality growth bias and adopts a Sustainable Focused strategy. The fund outperformed the comparative benchmark during 2022 in a falling market. The underweight stance in large cap growth stocks including ecommerce player Amazon.com, electric vehicle manufacturer Tesla, iPhone maker Apple and lack of exposure to Meta Platforms (formerly Facebook) and Nvidia contributed to relative returns as negative investor sentiment coupled with supply issues in respective end markets weighed on shares. The top contributor, infrastructure services provider Quanta Services added value following an upbeat revenue guidance for the year. The company has attractive growth prospects in electrical grid development and underground gas infrastructure modernization. Another key contributor, HDFC Bank and a play on financial inclusion theme maintains a healthy asset quality with a sequential decline in slippages and healthy recoveries and continues to offer superior returns compared to its peers. Conversely, the fund's underweight stance in the energy sector (best performing sector) with lack of exposure to Exxon Mobil and Chevron hurt relative returns. The fund was not immune to dramatic selloffs in some of the higher growth stocks, and exposure to Omnicell and Icon hurt relative returns. Automated pharmacy solutions provider Omnicell declined as a slowing revenue growth trajectory continued to drag performance lower. This position was closed. The position in clinical research organisation (CRO) Icon declined over concerns regarding the ongoing market concerns about the level of biotech funding. Elsewhere, shares in credit reporting agency TransUnion underperformed after the company lowered its full year revenue and earnings guidance. Nonetheless, it is a high-quality compounder with continuous runway for outperformance, that bodes well for the earnings growth of the company in the long-term. US-based installer and distributor of insulation products TopBuild also declined as inflation concerns and higher mortgage rates weighed on stock performance. The position was sold in favour of better opportunities elsewhere.

## Investment Manager's Report (continued)

### US Equity Value FAM Fund (the "Sub-Fund")

Equity markets declined in the first quarter of 2022 amid volatility sparked by Russia's invasion of Ukraine, rising commodity prices, rampant global inflation and the US Federal Reserve's (the Fed) shift toward tighter monetary policy. Russia's invasion exacerbated inflation pressures, disrupting already strained supply chains and increasing shortages of oil, gas and raw materials. The price of oil rose sharply, with crude prices reaching their highest price per barrel since 2008. Inflation continued to be a top concern for consumers, investors and the Fed. To combat inflation, the Fed raised the federal funds rate by one-quarter percentage point in March and indicated it would "taper" its asset purchase program quickly. As the war in Ukraine continued and inflation rose, the equity markets sold off in April, continuing into the second quarter of 2022. Driven by higher food and energy prices, the consumer price index rose by a 40-year high to 8.6% for the twelve months ended May 2022 and oil prices peaked near \$122 per barrel in early June. To tame inflation, the Fed raised the benchmark federal funds rate three more times, by 0.50% in May, by 0.75% in June and another 0.75% in July, which were the largest increases in nearly 30 years. US equity markets rose in July and August until the Fed reiterated that it would continue taking aggressive action to curb inflation, even though such measures could "bring pain to households and businesses," and the Fed raised the benchmark federal funds rate by another 0.75% in September. After experiencing a sharp drop in September 2022, US equity markets rebounded in October and November, despite mixed data on the economy and corporate earnings. However, the Fed's message of continued rate hikes, sent markets lower in December. As energy prices declined, the rate of inflation slowed modestly in the fourth quarter. Corporate earnings generally met expectations, though companies provided cautious future guidance. With inflation still at multi-decade highs, the Fed raised its target rate by 0.75% in November and by 0.50% in December, marking its highest level in over a decade. Contributors to relative performance included stock selection within real estate, materials, consumer staples, communication services, utilities, healthcare and consumer discretionary. Within real estate, Host Hotels & Resorts outperformed based on the massive increase in travel over 2022, while not owning specialty REITs also helped. In materials, fertilizer and agriculture chemical companies, CF Industries Holdings and Corteva both outperformed after beating earnings estimates and reporting higher average selling prices for its top products. In consumer staples, Philip Morris's IQOS (line of heated tobacco and electronic cigarette products) growth should serve as a tailwind to revenue growth due to higher revenue for IQOS vs traditional combustibles. Favorable geographic mix shift to Europe should allow for higher revenue growth compared to other regions. Within consumer discretionary, Las Vegas Sands outperformed and contributed to absolute and relative returns. The stock rallied after the Macau government announced it will resume. Detractors to relative performance included stock selection in financials, information technology (IT), industrials and energy. In financials, large banks, Bank of America and Citigroup, underperformed due to lower profits from increased reserves and investor concerns of a pending recession. Also, having an overweight in regional banks that underperformed and not owning visitation access from Mainland China. Berkshire Hathaway that outperformed, hurt relative performance. Within IT, NXP Semiconductors, Qualcomm, Cognizant Technology and DXC Technology underperformed. Qualcomm stock fell on prospects of an inventory correction. While industry challenges remain, we see the company's leadership in cellular technology (3G/4G/5G) as a differentiator given improving demand for handsets. Within materials, International Paper was a large detractor. The stock price suffered after management reported weaker demand and lower profit margins due to an environment with more pervasive inflation. Within energy, having no exposure to oil/gas service and refining/marketing industries, as well as being largely underweight Exxon Mobil, were the largest detractors.

**Invesco Advisers, Inc.**  
**March 2023**

# **FAM Series UCITS ICAV**

## **Investment Manager’s Report (continued)**

### **M&G North American Value FAM Fund (the “Sub-Fund”)**

The fund fell in 2022 but ended the year well ahead of its benchmark index, helped by a powerful rotation towards the value investment style. Asset allocation and stock selection both supported relative performance, reflecting the breadth of the value tailwind. Above-index positions in energy was helpful as oil and gas prices were elevated for much of the year, as well as in more defensive areas of the market such as consumer staples and healthcare. The underweights in information technology and consumer discretionary also assisted relative performance, as the former weakened with the market rotation away from the growth investment style, and the latter was affected by rising costs. Stock selection was strong across the market except in energy and communications services where it had a neutral effect, and in industrials where it detracted value, but this was mainly due to stocks the fund did not hold. At the individual stock level, energy holdings Chevron and ConocoPhillips were notable contributors as they benefited from soaring oil and gas prices after Russia’s invasion of Ukraine. Some of our defensive holdings held up well as concerns about the economic outlook took hold. These included the utility Constellation Energy, which also benefited from the US\$400bn Inflation Reduction Act (IRA) supporting the shift to renewables, and healthcare stocks Bristol Myers Squibb and Merck. We have liked the sector’s valuation and fundamentals for some time, especially the stable cashflows earned by pharmaceutical companies. In addition, the drug pricing caps implemented in the IRA were not as severe as expected. Not holding Amazon, Tesla, Apple and Nvidia added value too, given the weakness in the consumer discretionary and technology sectors. On the other hand, TV and media group Warner Bros Discovery was a notable laggard. The company was formed in a merger in April and the shares have been weak since amid concerns about the integration process. In addition, the HBO owner reported falling revenues in its latest results, reflecting increased competition in streaming services. However, we believe the company produces a huge amount of varied content and investors are underappreciating its prospects. The fund’s technology company holdings were not immune from the sector weakness and included eBay, Micron Technology and Western Digital. Elsewhere, car maker General Motors declined amid concerns about higher input costs and disruption to the automotive supply chain. Conversely, not holding Eli Lilly and United Health in the healthcare sector detracted value, as did a zero weighting in energy company Exxon Mobil which is not a participant in the transition to clean energy.

**M&G Investment Management Limited**

**March 2023**

# **FAM Series UCITS ICAV**

## **Investment Manager's Report (continued)**

### **Amundi Emerging Markets Bond FAM Fund (the "Sub-Fund")**

The portfolio outperformed its benchmark in 2022, mainly driven by our duration strategy and cash positioning, while our FX allocations detracted marginally from excess returns. Over majority of the year we retained an underweight duration bias, in the face of sticky inflation. In the second half of the year, we recalibrated our positioning taking profits and were less short duration, as yields repriced higher. Our view has remained that inflationary pressures were likely to cause DM central banks to raise policy rates. Over the year ending December, the yield on 10-year US treasuries moved higher by 2.36% to close the year at 3.87%. We maintained our beta and cash positioning dynamically over the course of the year that contributed positively. Within hard currency credit selection, the largest drivers of excess returns included an underweight bias to Russian debt, as well as an overweight bias to Argentina. Within FX, our positioning in the South African rand detracted marginally from returns, while our positioning in the dollar for majority of the second half of the year did well.

**Amundi Ireland Limited**  
**March 2023**

# **FAM Series UCITS ICAV**

## **Investment Manager's Report (continued)**

### **Amundi Strategic Bond FAM Fund (the "Sub-Fund")**

The portfolio delivered negative returns in 2022. The fixed income universe, had a challenging start of the year.

The geopolitical tensions triggered by the escalating conflict between Russia and Ukraine dominated the market focus. Despite turning more defensive and progressively reducing out exposure to the conflict since the beginning of 2022, our exposure to these countries detracted performance over the year. Our reduced exposure to both countries contained, but did not eliminate, the negative performance contribution of this conflict.

However, the rates environment was the main performance detractor in 2022. Our active duration management proved beneficial mitigating the negative performance impact from the rates move. Nevertheless, duration was an overall detractor of performance over the period mainly driven by our exposure to the EUR curve. Coming into 2023, whilst the markets expect the ECB to slow its hiking process, we believe that we will remain in an environment of tighter monetary policy.

Within European High Yield, the real estate sector detracted performance in the second half of the year. The poor governance of a couple of issuers caught investors by surprise leading to negative performance within the sector. In line with our risk allocation, the banking sector was another significant driver of negative returns.

The previously mentioned geopolitical conflict also led to a rise in commodity prices, in particular Oil prices. Within EM the energy sector was one of the strongest contributors to performance over the year. Oil prices remained sustained throughout the year on the back of the conflict and other events such as OPEC reducing their supply or signs of China reopening towards the end of the year.

Within China, the developments surrounding the real estate sector detracted performance. This trend started to reverse as we approached year-end as expectations of further easing of the zero covid policy increased. In one month, China dropped most of its Covid-related restrictions, vowed to support the housing market further, and set pro-growth policies.

**Amundi Ireland Limited**

**March 2023**

# **FAM Series UCITS ICAV**

## **Investment Manager's Report (continued)**

### **Amundi European Equity Value FAM Fund (the "Sub-Fund")**

The portfolio underperformed its benchmark, the MSCI Europe Value, in 2022. As a general comment, our exposure to the "real economy" cyclicals (the consumer/industrial names) was a headwind given the recessionary concerns. Adding to this, our underweight exposure to the more commodity related areas hurt the relative performance given the geopolitical premium in some commodity markets post the Russia/Ukraine war in February. This has started to abate as commodity prices have recently declined. Looking across sectors for the year, Utilities and our zero exposure to Real Estate contributed positively while Consumer Discretionary and Materials (not owning some mining names hurt in H1), and Consumer Staples all detracted.

At a single stock level, our holding of integrated energy company Repsol added solid gains helped by the strong oil price. Our holding of media and events company Informa also performed well helped by the post Covid reopening and normalisation of public events. Lastly, on the positive side, Deutsche Telekom performed well as investors favoured the more defensive names given the market volatility.

On the negative side, UK homebuilder Persimmon lagged as a combination of cost inflation, a slowing UK economy, and higher interest rates caused nervousness amongst investors. The Covid-19 lockdown situation in China which persisted for most of 2022 was a clear headwind for our holding of luxury company Kering. Finally on the negative side, our holding of auto component maker Faurecia suffered as concerns about inflation impacting margins as well as slowing end markets were a clear headwind. We sold this name in 2022.

**Amundi Ireland Limited**  
**March 2023**

# FAM Series UCITS ICAV

## Investment Manager's Report (continued)

### Emerging Markets Bond Hard Currency FAM Fund (the "Sub-Fund")

2022 was a negative year for financial markets, with equities seeing their worst annual performance since 2008, just as global bonds fell into a bear market for the first time in decades. Investors grappled with multi-decade high inflation, aggressive monetary policy normalisation and geopolitical turmoil, since Russia's invasion of Ukraine in February led to massive spikes in energy and food prices. The Fed began its hiking cycle in March with a 25bps move. In the face of stubborn inflation, they increased the pace of rate hikes to 75bps in June, July and November. The ECB also hiked rates for the first time in over a decade, opening with a 50bps move in July and following up with a 75bps move in September. Q4 marked the only quarter of the year where markets had a broadly positive performance. In early October, the S&P 500 hit its closing low for the year amidst a nervous market backdrop. However, markets were more resilient after that as both the October and November CPI readings from the US surprised on the downside. Strong US November job market data cooled the markets' dovish narrative. With inflation falling back, both the Fed and the ECB stepped down to 50bp hikes in December, but they remained hawkish in both cases, signalling further rate hikes ahead in 2023.

Within Emerging Markets, we saw different dynamics across regions. Central banks in Latin America proactively fought against an elevated inflation by strengthening their tight monetary policies at the beginning of the year. As the year passed, this proactivity allowed countries such as Brazil to pause their tightening policies and be well positioned at the time of global growth deceleration. In Asia, the picture is different and inflation had been somehow subdued due to an economic reopening which only started in the second quarter 2022 and had been gradual across the region. The exception to this has been China, which moved from a zero COVID policy to a full reopening in only couple of weeks, after the re-election of Xi Jinping mid-October. Apart from central banks actions, emerging markets faced a numerous number of challenges in 2022.

Starting with Central Eastern Europe, the conflict between Ukraine and Russia had a global impact across a wide range of implications such as economic (sharp increase of energy & food price), social (Migration wave across European countries) and geopolitical impact. The conflict is far from being resolved as of December end 2022. Moving to Asia, the Zero Covid policy in China combined with the tightening of regulatory policies across sectors including Real Estate, also had a strong impact on markets, pushing many property developers to default on their debt. Sovereign issuers were not immune against debt restructuring and we saw various emerging countries defaulting (Sri Lanka, Ghana) or seeking help from the International Monetary Fund (IMF).

In USD terms, EM Hard Currency Sovereign (JPM EMBI Global Diversified) delivered -17.78% with most of the underperformance coming from US treasuries component (-14.%). In 2022, there were strong regional disparity with the Middle East outperforming other regions including Europe (-35.88%) which lagged due to the direct impact of the Ukraine war. Within the asset class, both Investment Grade and High Yield underperformed, returning -19.76% and -15.68% respectively for the year.

The fund annual returns were negative at -18.23% (net of fees, for the IHC share class) but above the benchmark by 1.91% net of fees with a positive contribution from both our duration and emerging bonds strategies.

On duration, an underweight duration positioning that we kept through the year was the key performance driver. The portfolio had a defensive positioning on duration as we were expecting US treasuries to sell off in anticipation of higher inflation in the US and tighter monetary policy from the US Federal Reserve. The Fed action pushed US Treasury yields higher across the curve (Between 369bps for 2y tenor and 206bps for longer dated bonds). On Emerging bonds, our strategy had a positive contribution too, on the back of the active management of our directional exposure toward the asset class. A defensive positioning in the first part of the year allowed the portfolio to remain ahead of the benchmark, while we succeeded to benefit from the strong rebound of risky asset in the fourth quarter. Finally, country selection detracted returns. We benefitted from the underweight exposure to Russia that we had before the Russia-Ukraine conflict started, and maintained up to the removal of Russia and Belarus from the benchmark. Elsewhere we benefitted from overweight allocations such as in Bahrein or in Brazil, two countries that benefited from elevated commodity prices. Our underweight exposure to Pakistan also brought gains, as the country was negatively impacted by historical floods that put further pressure in an economy already relying on the IMF support. On the flip side, the overweight exposure to Ukraine detracted due to the impact the war has had on Ukraine's economy and the reconstruction cost which keeps rising. Furthermore, our slight overweight exposure to Sri Lanka, combined with an overweight exposure to Chinese real estate detracted returns. Finally, our underweight exposure to Turkey brought losses, as the country recorded a strong performance from hard currency bonds despite maintaining an unorthodox monetary policy and facing historically high inflation.

# **FAM Series UCITS ICAV**

## **Investment Manager's Report (continued)**

### **Emerging Markets Bond Hard Currency FAM Fund (the "Sub-Fund") (continued)**

We actively managed both our duration and directional exposure to emerging market hard currency bonds through the year. On duration we entered 2022 with an underweight of around 3 years versus the benchmark that we gradually reduced through the year, taking profit on the gain made from the treasury market sell-off. As for our directional exposure, while we had a constructive view on the medium term, we started the year with a tactical defensive positioning toward the asset class that we further reduced during the first semester with the implementation of some credit protection via CDS following the unexpected war declaration from Russia. Credit protection was gradually removed and we increased our exposure to the asset class, mainly through high yielding bonds (Senegal, Brazil, Egypt, El Salvador) which were providing an attractive valuation following the spread decompression that they faced versus Investment Grade bonds until October 2022. In terms of countries allocation, while the primary market has been depressed through the year, we actively adjusted our positioning via the secondary market. One of our key adjustment was performed in Russia where we moved from a neutral to an underweight positioning in February 2022 before the conflict starts. Closer to year-end, we took some profits in Mexico and reduced the exposure to quasi issuers, which benefitted from elevated oil prices. We reallocated some of our exposure across various countries where we had a defensive positioning such as Poland and Ukraine (Due to the geographical proximity with Ukraine), Turkey or South Africa.

## Investment Manager's Report (continued)

### Euro Bond FAM Fund (the "Sub-Fund")

Throughout the year, inflation figures, Central Banks communication and actions remained the main market movers.

The levels reached by inflation figures are the result of consecutive supply shocks – bottlenecks post Pandemic to face the pent-up demand, energy prices plummeting because of the Russian-Ukrainian conflict. These levels have called for a monetary response from Central Banks, which took the form of several rates hikes.

Hence, the Federal Reserve hiked seven times during the year for a total of +425 bp, being really concerned to be able to contain the price to wage loop even at the expense of economic activity. The ECB delivered a series of four hikes totaling +250 bp to curb inflation spillover effects, driving market expectations one way or another depending on the hawkishness of C. Lagarde tone. The ECB also ended its buying program in June and pointed several risks to the inflation front in its new forecasts. Even if inflation may have peaked at 10.6% in October, the deceleration is slow. The ECB has no certainty as to the extent of wage catching-up, especially as the fiscal measures decided since September preserve consumption potential. The resilience of advanced business indicators supports this vision. While there was at first the fear of a hard recession, holding back Central Bankers, growth now seems more resilient than expected and the ECB warns that it plans to move key interest rates into restrictive territory well beyond the bond market pricing and to hold them there for longer.

In this context, the German 10 year rate went up by +128 bp to 2.56% after reaching a low at 0.78% by end of July when market participants hoped the July +50 bp move would limit the number of necessary hikes. During the part of the year, 2 year German rates went up by +213 bp to 2.77%. As a result, the yield curve flattened to become inverted. This is consistent with the ECB going into a restrictive territory and being obliged to cut rates afterwards.

Despite tightening in the end of the year, credit spreads widened over the year, driven by rising interest rates. A significant part of this spread widening came from the underperformance of swap spreads. Swap rates were first driven up by banks hedging their mortgage exposure (swap payers). The second most impactful effect was the scarcity of German paper, sought after for collateral needs, thus limiting the sell-off of German debt. But in the end of the year, the Finanzagentur and the ECB took technical measures to alleviate the collateral scarcity helping swap spreads to perform. Therefore during the last quarter, swap rates went up but by a lesser extend as Banks hedging flows have diminished drastically while the issuance programs of Sovereigns are significantly higher in 2023.

The absolute performance suffered from the increase in interest rates even if it proved more resilient than its benchmark thanks to the underweight in modified duration and its flattening stance, despite the credit and swap related products overweight.

The central issue for 2023 remains the inflation landing point that will determine how restrictive central banks, and the ECB in particular, will be.

### Euro Corporate Fixed Income FAM Fund (the "Sub-Fund")

Throughout the year, inflation figures, Central Banks communication and actions remained the main market movers.

The levels reached by inflation figures are the result of consecutive supply shocks – bottlenecks post Pandemic to face the pent-up demand, energy prices plummeting because of the Russian-Ukrainian conflict. These levels have called for a monetary response from Central Banks, which took the form of several rates hikes.

Hence, the Federal Reserve hiked seven times during the year for a total of +425 bp, being really concerned to be able to contain the price to wage loop even at the expense of economic activity. The ECB delivered a series of four hikes totaling +250 bp to curb inflation spillover effects, driving market expectations one way or another depending on the hawkishness of C. Lagarde tone. The ECB also ended its buying program in June and pointed several risks to the inflation front in its new forecasts. Even if inflation may have peaked at 10.6% in October, the deceleration is slow. The ECB has no certainty as to the extent of wage catching-up, especially as the fiscal measures decided since September preserve consumption potential. The resilience of advanced business indicators supports this vision. While there was at first the fear of a hard recession, holding back Central Bankers, growth now seems more resilient than expected and the ECB warns that it plans to move key interest rates into restrictive territory well beyond the bond market pricing and to hold them there for longer.

Despite tightening in the end of the year, credit spreads widened over the year, driven by rising interest rates. A significant part of this spread widening came from the underperformance of swap spreads. Swap rates were first driven up by banks hedging their mortgage exposure (swap payers). The second most impactful effect was the scarcity of German paper, sought after for collateral needs, thus limiting the sell-off of German debt.

The absolute performance suffered from the increase in interest rates even if it proved more resilient than its benchmark thanks to the underweight in modified duration and its flattening stance, despite the credit and swap related products overweight.

2022 is the worst performance since 2008 on Credit Investment Grade with -13% total return.

Credit markets ended the year in negative territory as a result of the accumulation of negative events: a hawkish ECB and Fed, Russia's referendums in Ukraine, the Italian elections and the minibudget in the UK. The first catalyst was the latest news from the war between Ukraine and Russia, ie. The annexation decision by Russia of territories in Ukraine and the decision to stop gas supply. Nordstream 1 has been closed for an indefinite period and possible sanctions by Russia on Naftogaz 3 would threaten gas flows to Europe, via Ukraine. The decisive win of right wing parties in Italy's parliamentary election led to strong BTP-Bund widening. More recently, the new UK government's controversial mini-Budget caused significant volatility on the market. New issuance fell victim to rising risk aversion. With more than half of the year gone, IG and HY issues will certainly end at a lower level than last year, except for senior financials, which largely drove the primary market.

On the credit side, primary activity slowed at the end of the year, bringing the annual figure to €512bn. This figure is 20% lower than in 2021, but still very high given the rise in risk aversion.

We kept our Beta below 1. In Q3 2022 A possible recession in the coming months in Europe was approaching and the fear of a deterioration in corporate fundamentals was growing. There were many elements of market volatility in Q3 and it therefore seemed more prudent to us not to put risk back into the portfolio. In Q4 2022 the Beta of the portfolio was brought to 1.10 around. We were able to take advantage of the primary issues and New Issue Premiums in Q4.

Impact of the rise in rates by central banks has a negative effect on rates and credit spreads. The speed and strength of this rise in interest rates on both sides of the Atlantic influences our positioning in terms of interest rate duration. We remained underweight against our benchmark. On the curve, we stay away from long dated bonds, which are more sensitive to the volatility of sovereign rates.

Volatility and the rise in European interest rates following the decisions of the various central banks in mid-December led us to decrease the modified duration of the portfolio relative to its benchmark. We went from -0.20 in October to +0.17 in November to -0.37 at the end of the year.

# **FAM Series UCITS ICAV**

## **Investment Manager's Report (continued)**

### **Euro Corporate Fixed Income FAM Fund (the "Sub-Fund") (continued)**

In a volatile market after the decisions of the Central Banks, we were still able to observe many positive flows on GI. The attraction of the level of rates and credit spreads is reviving interest in the GI asset class even in this volatile environment. We ended the year with over 10 billion in redemptions in the asset class.

The trend in January will be based on the different interpretations of inflation figures in the US and Europe. A slowdown, proven or insufficient for the inflation targets, will influence the level of rates and credit spreads.

Looking ahead, we maintain our cautious credit stance. Credit spreads and sovereign rates will remain volatile. A real policy reversal by central banks is not yet possible, given the persistence of inflation and the strong will to fight it. On the growth side, falling earnings, declining consumer demand and rising financing costs should add to investor unease. That said, the uncertain economic environment and attractive bond valuations make IG credit more attractive to investors, who should continue to return to the asset class.

## Investment Manager's Report (continued)

### Euro Short Duration Bond FAM Fund (the "Sub-Fund")

Amid extremely challenging market conditions, portfolio performance suffered a drawdown over 2022. Duration management was responsible for much of the underperformance. An overweight duration stance was used to express various iterations of our slowing growth theme over the year. Our rates strategy reflected our pessimistic growth outlook. As we started the year, we saw evidence that the post-Covid rebound in demand was behind us and identified a number of headwinds to growth as fiscal support was withdrawn. We held an overweight duration stance (initially concentrated in the UK and Europe) to reflect this view. While we didn't foresee the outbreak of war in Ukraine, we were concerned that the market was too complacent about this risk. We closed our shorts in US and European inflation and retained overweight duration on the rationale that any war would lead to a flight to quality. With hindsight we underestimated that central banks and markets would focus on the upside risk to inflation rather than the downside risk to growth. Central banks as a result became more engaged, focusing on the containment of inflation pressures, which saw the traditional safe-haven correlations of bond markets break down. During usual risk-off events, duration would have been sufficient to protect some of the more cyclical risk held in the portfolio, but on this occasion it was an ineffective hedge. The war shifted the narrative on inflation and increasingly it contributed to our negative view on global growth, especially across Europe. With inflation acting as a tax on the consumer and squeezing profit margins, we expected challenging times ahead. We saw additional signs of the global growth slowdown underway as purchasing managers indices (PMIs) fell into contractionary territory and there was further evidence of deteriorating housing markets across the world. Against this backdrop and given already elevated Treasury yields, US duration was becoming an increasingly attractive means of adding risk to the fund. With the US economy well into a rate hiking cycle, we expected tighter financial conditions to act as an additional headwind. However, in retrospect we were too early in implementing outright US duration. We underestimated the Fed's commitment to contain inflation even at the risk of the economy falling into recession. With the Fed's Chair Powell increasing emphasis over the need to address labour market imbalances in a period where official inflation measures continued to surprise to the upside, we cut our position given the risk of further losses. In the latter stages of the year, while being alert to opportunities emerging as a result of labour market weakness, we kept overall duration much closer to benchmark, seeing greater benefit from exploiting relative value opportunities. Signs of divergence in central bank forward guidance, driven in part by a more dovish outcome in those economies that are more vulnerable to weaker housing markets, was increasingly a determinant of our rates strategy. This generally worked well, particularly through the short European rates position against the UK. While UK duration was a major factor in the fund's relative underperformance over the year, it's worth noting that we avoided much of September's dramatic market sell-off by cutting positions ahead of the Budget announcement. The lack of robust framework around the new Prime Minister Truss' fiscal package, which looked to be permanent and largely unfunded at a time when the deficit was already high, was clearly a concern for investors. With the drastically revised, more fiscally prudent Budget later presented by the government of new Prime Minister Sunak bringing some semblance of calm to the market, we have been more confident in adding back UK duration longs on a cross-market basis, such as the position against Europe noted above. In summary, performance was disappointing in an extraordinary year for fixed income. Duration was the wrong way to reflect our pessimistic view on growth as the market continued to grapple with problematic inflation even though recessionary risks loomed. Better performance was delivered towards the end of the year, in part by managing duration risk cross-markets.

### **Fineco AM European Corporate Bond Fund (the "Sub-Fund")**

The European Corporate Bond FAM Fund was internalised in June 2021, having previously been managed by M&G. Overall for the full year, the Fund realised a total return of -14.90% net of fees.

In a year with significant idiosyncratic risks, the Fund benefitted from positive Issuer and security selection. While the Fund maintained a higher credit spread exposure than its benchmark, it managed to largely avoid idiosyncratic events. The Fund held an overweight in financial sector assets, mainly in the banking space, while underweighting consumer and industrials sectors.

The Fund was active in primary markets and tended to use new trades as an opportunity to capture pricing anomalies and to switch into quality Issuers

# **FAM Series UCITS ICAV**

## **Investment Manager's Report (continued)**

### **M&G Optimal Income FAM Fund (the "Sub-Fund")**

The fund delivered a negative return in 2022, although the return was ahead of its reference benchmark over the year. It has been a challenging period for bond markets overall, with returns and investor confidence affected by high inflation, hawkish sentiment from central banks, and uncertainty over international events more generally. Positive drivers of relative return over the period include corporate credit, mainly in the fourth quarter of the year. Within corporate credit - still the investment manager's preferred bond asset in 2022 - fund exposure to credit default swap markets proved helpful as financial derivatives mainly outperformed physical bonds for most of the period. Within this, exposure to investment grade (high-quality) bonds issued by financial companies was a key driver. The sharp fall in the value of sterling assets towards the final days of the third quarter weighed on relative fund return, given exposure to both UK credit and UK duration. Equity exposure, which was trimmed in the year, was marginally supportive year-to-date on a relative basis. High yield exposure – which is around a third of fund assets - proved flat in terms of relative contributions.

## Investment Manager's Report (continued)

### Schroder Euro Bond FAM Fund (the "Sub-Fund")

Amid extremely challenging market conditions, portfolio performance suffered a drawdown and underperformed its benchmark over 2022. Duration management was responsible for much of the underperformance. An overweight duration stance was used to express various iterations of our slowing growth theme over the year. While other rates positions, including curve flatteners and some relative value trades used to express our pessimistic view on growth contributed positively, they were insufficient to offset the magnitude of losses from outright duration as yields rose sharply. Our rates strategy reflected our pessimistic growth outlook. As we started the year, we saw evidence that the post-Covid rebound in demand was behind us and identified a number of headwinds to growth as fiscal support was withdrawn. We held an overweight duration stance (initially concentrated in the UK and Europe) to reflect this view. While we didn't foresee the outbreak of war in Ukraine, we were concerned that the market was too complacent about this risk. We closed our shorts in US and European inflation and retained overweight duration on the rationale that any war would lead to a flight to quality. With hindsight we underestimated that central banks and markets would focus on the upside risk to inflation rather than the downside risk to growth. Central banks as a result became more engaged, focusing on the containment of inflation pressures, which saw the traditional safe-haven correlations of bond markets break down. During usual risk-off events, duration would have been sufficient to protect some of the more cyclical risk held in the portfolio, but on this occasion it was an ineffective hedge. The war shifted the narrative on inflation and increasingly it contributed to our negative view on global growth, especially across Europe. With inflation acting as a tax on the consumer and squeezing profit margins, we expected challenging times ahead. We saw additional signs of the global growth slowdown underway as purchasing managers indices (PMIs) fell into contractionary territory and there was further evidence of deteriorating housing markets across the world. Against this backdrop and given already elevated Treasury yields, US duration was becoming an increasingly attractive means of adding risk to the fund. With the US economy well into a rate hiking cycle, we expected tighter financial conditions to act as an additional headwind. However, in retrospect we were too early in implementing outright US duration. We underestimated the Fed's commitment to contain inflation even at the risk of the economy falling into recession. With the Fed's Chair Powell increasing emphasis over the need to address labour market imbalances in a period where official inflation measures continued to surprise to the upside, we cut our position given the risk of further losses. ## Investment Manager's Report (continued)

### European Equity FAM Fund (the "Sub-Fund")

European equities generated negative returns in 2022. Increasing concerns around inflation and higher bond yields led to volatile swings and significant sector and style rotations across global markets. The geopolitical crisis arising from the war in Ukraine accelerated the economic deterioration that was already underway and increased the pressure on supply chains that were already strained due to successive COVID-19 lockdowns. There has also been a sharp rise in the cost of energy, further fuelling inflationary pressures and inviting a more hawkish stance by most major central banks. Record high levels of inflation led the European Central Bank (ECB) to hike its policy rate by 0.5% in July and 0.75% in September. The ECB further increased rates by 0.75% in October and by 0.5% in December. On the back of upward revisions to the inflation outlook, the central bank is likely to implement further significant rate hikes at a steady pace to ensure a timely return of inflation to its 2% target. The ECB's future decisions are likely to be data and outlook dependent and will depend on the size and composition of fiscal responses and developments in euro and peripheral spreads. Equities were also supported by optimism around European corporate earnings and the reversal of nearly all the unfunded tax cuts announced in the UK's September "mini-budget". The appointment of Prime Minister Rishi Sunak following the resignation of Mary Elizabeth Truss also supported markets. Against this backdrop, all sectors ended the year in negative territory. Energy, which rose over 40%, was the only exception. The portfolio returned -16.4% (gross of fees, EUR) versus the benchmark which returned -9.5%. The underperformance was largely driven by unfavourable stock selection in the industrials and health care sectors. Positioning within most sectors, notably the underweight stance in health care and the overweight exposure to information technology (IT), also hampered performance. However, robust stock picking within IT added notable value. At the stock level, shares in hearing aid manufacturer GN Store were weak as Shanghai and other areas in China entered lockdowns to curb COVID-19 infections, thus increasing the uncertainty around component supplies. The stock further derated given uncertainties around slowing customer demand and elevated input costs. Wizz Air declined given its exposure to Ukraine. Later in the period, it reported a net loss for FY22, cautioning that it expects an operating loss for the first quarter of FY23 as a result of industry disruptions and a volatile macroeconomic environment. In August, the stock further derated as its Chief Financial Officer, who successfully guided the company during the pandemic, decided to step down from his position. The holding was sold in October. Networking and telecommunications company Ericsson traded lower after it disclosed the results of an internal investigation that detailed suspect payments and misconduct in Iraq during 2011–2019. The company's share price derated further on weak quarterly results and on news that it sold equipment to clients in Russia. However, the company clarified that it only provided support related to equipment that had already shipped and had not made any sales to Russian customers post the implementation of sanctions. German real estate company Vonovia fell as the stock was treated as a bond proxy. Despite reporting in line first half 2022 results in August, Vonovia further declined as management issued a cautious outlook around higher energy prices and rising interest rates, which dampened investor sentiment. On a positive note, the position in employee benefits and incentives programme provider Edenred was the most notable contributor to performance, driven by consensus-beating first quarter and first half results. Edenred said that it expects to continue to benefit from the current macroeconomic environment. Inflation is a positive for the company, through the higher face value of vouchers, rise in fuel prices and increased financial income. This, coupled with strong structural growth opportunities, should continue to drive upgrades to organic growth. Oil major TotalEnergies rose in line with the wider energy sector. Luxury conglomerate Richemont announced strong first half results with a beat across divisions driven primarily by Jewellery Maisons. The sale of Richemont's controlling stake in online retailer Yoox Net-A-Porter also supported the group's operating margin. Pharmaceutical business AstraZeneca was also a source of strength following better than anticipated fourth quarter results and the signing of a contract with the Swiss Federal Office of Public Health to procure drugs to prevent COVID-19. Strong second quarter results, with a solid beat across the board and upward revision to its revenue guidance, also supported its shares. In November, the company announced positive third quarter results, with sales beating consensus estimates.

### FIL Pensions Management March 2023

# **FAM Series UCITS ICAV**

## **Investment Manager's Report (continued)**

### **Fineco AM Global Premium Equities Fund (the "Sub-Fund")**

The fund returned -2.8% in absolute terms, net of fees for 2022. Global equity markets experienced a tough 2022, posting their worst performance since GFC in 2018. Its negative performance was mainly driven by high valuation multiples, Russia's invasion of Ukraine and inflation. Continuation of persistent inflation, mainly driven by supply chain bottlenecks, in 2022 prompted central banks around the world to aggressively start hiking interest rates hurting stocks, in particular growth stocks which due to their higher valuation multiples and the nature of long duration earnings was hurt the most. On the contrary the cheaper part of the market held out relatively well as can be seen by the value style. In the US inflation reached a 40 year high above 9% in June which appears to have been the peak and eased to 6.5% in December. During the year the fund was overweight inflation sensitive sectors such as Energy and Materials, defensive sectors such as Healthcare and underweight economically sensitive sectors such as Consumer Discretionary and also underweight Information Technology and Communication Services which suffered from a central bank pivot from easy money policies in 2021 to interest rate increases. From an sector allocation perspective, overweight in Energy and underweight in IT were the two single largest contributors. On an individual security basis, our single largest contributor in 2022 was Rheinmetall which manufactures armoured cars and was a significant beneficiary from the German government's announcement of a EUR100bn defense force increase. Other positive contributors were in the Energy and Healthcare sector with Schlumberger and McKesson, respectively followed by Merck on the pharma side. Negative contributors include Evolution Mining, on the back of lower gold production guidance. Other detractors include Travis Perkins (building materials), Sony (Consumer Electronics) due to higher materials cost, poor economic outlook. On outlook, the fund is well positioned for a continuation of volatility and the economic slowdown that looks likely given still high inflation pressures and tightening financial conditions. Were Central Banks to pivot and start cutting interest rates, the fund would likely perform well in an absolute sense but would at least initially lag behind more long duration growth strategies.

**Boston Partners Global Investors, Inc.**

**March 2023**

# **FAM Series UCITS ICAV**

## **Investment Manager's Report (continued)**

### **Fineco AM Global Equity Fund (the "Sub-Fund")**

The fund returned -15.8% in absolute terms, net of fees for 2022. Global equity markets experienced a tough 2022, posting their worst performance since GFC in 2018. Its negative performance was mainly driven by high valuation multiples, Russia's invasion of Ukraine and inflation. Continuation of persistent inflation, mainly driven by supply chain bottlenecks, in 2022 prompted central banks around the world to aggressively start hiking interest rates hurting stocks, in particular growth stocks which due to their higher valuation multiples and the nature of long duration earnings was hurt the most. On the contrary the cheaper part of the market held out relatively well as can be seen by the value style. In the US inflation reached a 40 year high above 9% in June which appears to have been the peak and eased to 6.5% in December . The strategy's poor performance is mainly explained by stock selection as the market moved to price in interest rate hikes which hurt the valuation of long duration quality names in the portfolio. The fund was also hurt by low allocation to Energy, the best performing sector in 2022. On an individual security basis, Healthcare and Consumer Staples names did best, perhaps not surprisingly given the volatile and softening economic climate. Companies such as Merck, United Health and Becton Dickinson all proved their value, as did Coca Cola in the Consumer Staples sector. Main detractors unsurprisingly given higher interest rates were long duration quality growth stocks such as Microsoft and Amazon. Lower quality names such as Paypal which faced tough comparators, allied to an inflationary backdrop impacting costs and operational missteps were punished heavily. Other detractors included Hoya (inflation impacting margins) and Alphabet (lower revenues from digital advertising). On outlook, the fund owns high quality companies with long runways of growth, compelling business models and almost exclusively very strong balance sheets. While the current inflationary backdrop and higher interest rates continue to be a headwind, it also opens up significant opportunities for the companies in the fund to strengthen their franchises, improve their cost bases and to acquire assets which would have been economically unviable prior to the current sell off.

## **Investment Manager's Report (continued)**

### **Fineco AM Euro Corp Bonds Fund (the "Sub-Fund")**

The Fineco AM Euro Corp Bonds Fund was internalised on December 1st 2021 having previously been managed by DWS Asset Management. Over the full year, we sought to gradually and opportunistically transform the legacy portfolio closer towards preferred positioning. Reshaping trades tended to be done on an opportunistic basis both to minimise transaction costs, but also to take advantage of pockets of trading liquidity, particularly against the backdrop of broad market volatility.

The legacy portfolio was very granular, with a high number of individual issuers. As such, the Fund had exposure to a number of idiosyncratic / special situation type risks which weighed on performance. These included Issuers which were significantly impacted by the war in Ukraine as well as a meaningful number of ex-of-benchmark issuers.

Overall, the Fund realised a total return of -15.45% (net of fees).

As we entered 2023, work was ongoing to continue the reshaping on a tactical basis. The Fund has and continues to sell less preferred exposures into market strength, and looks to use primary market opportunities to further rationalise and consolidate exposures.

## Investment Manager's Report (continued)

### Flexible Equity Strategy FAM Fund (the "Sub-Fund")

2022 was one of the most challenging years since records began, with such negative performance not seen since 1931 and 1969. The situation in 2022 was extremely delicate, from Russia's invasion of Ukraine at the start of the year to the energy crisis caused by the war and, finally, spiralling inflation. The US Federal Reserve launched the most aggressive series of hikes seen in recent decades (7 hikes from March 2022) and inflation hit its highest level since the seventies. In Europe, inflation soared to over 10%, leading the ECB to intervene with a more aggressive monetary policy than in the past (4 hikes since July 2022). At year-end, the interest rates set by the central banks stood at 4.5% in the US and 2.5% in the Eurozone. The lockdown associated with the extremely strict zero-Covid policy adopted by China represented a further negative factor. The main market drivers in 2022 were the policies to manage interest rates adopted by the central banks to combat rising inflation, and fears of recession in the second half of the year. In this macroeconomic context, the markets performed extremely poorly: the only asset classes with positive performance were commodities (+13.8%) and the US Dollar (+6.2%). On the equity markets, the MSCI World index ended the year at -17%, with developed markets outperforming emerging markets. The only sector to perform positively at a global level was energy (+47.7%). In terms of investment strategies, the Value strategy performed best, while the Growth strategy performed worst. On the bond markets, every sector, from the safest to those with the highest risk, fell sharply. As regards government rates, the US 10-Year yield rose from 1.2% to 4.7%, while the Germany government bond went from negative figures to 2.7%. Consequently, the global government bond segment closed the year at -12.8%. In the corporate sector, however, there was a sharp widening of spreads which returned to the pandemic levels seen in 2020. In fact, both the High Yield and Investment Grade segments recorded extremely negative performance of -11% and -15% respectively.

### PORTFOLIO REVIEW:

In 2022, the Fund recorded negative performance due in particular to the strong corrective action of the equity markets in the first half of the year. In the second half of the year, performance was slightly positive thanks to a value-dividend positioning that outperformed the rest of the market. Over the course of the year, the energy, healthcare and financials sectors performed positively. The short-term bond component was marginally negative. During the year, the weighting of the equity component was initially stable, before rising in response to the first signs of a drop in inflation in the US. As at 31 December 2022, the equity weighting was 56.8% and the main sectors were information technology, financials, and healthcare. The equity segment is distributed equally in terms of geographic exposure between Europe and the United States.

## **Investment Manager's Report (continued)**

### **Finco AM Investment Grade Euro Aggregate Bond Fund (the "Sub-Fund")**

In 2022, the fund outperformed its index gross of fees and heavily outperformed its peer group. Our internal fund management team place an emphasis on the reflation trade in markets, monitoring the persistence of inflation and looking for opportunities in relative value positions. Our corporate bond exposure was more muted than competitors and we reduced risk over the period as the interest rate environment became more restrictive. Key outperforming strategies included a decision to underweight UK bonds at the beginning of the brief Truss premiership and positioning underweight Japanese government bonds ahead of the Bank of Japan partially raising their target yield curve control. Both positions benefitted performance. We also had a conviction to be long US bonds versus European bonds which also benefitted relative performance over the year

### **FIL Pensions Management**

## **Investment Manager’s Report (continued)**

### **Fineco AM Euro Corporate Bond Fund (the “Sub-Fund”)**

The Euro Corporate Bond FAM Fund was internalised in June 2021, having previously been managed by Janus Henderson. Overall for the full year, the Fund realised a total return of -17.14% (net of fees).

The main driver of underperformance was the Fund’s legacy overweight exposures to Real Estate issuers as well as a number of special situation Issuers which were significantly impacted by the war in Ukraine.

Over the full year, we sought to gradually and opportunistically transform the legacy portfolio closer towards preferred positioning. This involved a reduction in high yield and ex-of-benchmark exposures, replaced by “up in quality” trades. Reshaping trades tended to be done on an opportunistic basis both to minimise transaction costs, but also to take advantage of pockets of trading liquidity, particularly against the backdrop of broad market volatility.

Throughout the year, the Fund was selectively active in primary market transactions, and maintained a higher average yield than that of its benchmark.

## **Investment Manager's Report (continued)**

### **Fineco AM Global Equities Income Fund (the "Sub-Fund")**

The fund returned -3.5% in absolute terms, net of fees for 2022. Global equity markets experienced a tough 2022, posting their worst performance since GFC in 2018. Its negative performance was mainly driven by high valuation multiples, Russia's invasion of Ukraine and inflation. Continuation of persistent inflation, mainly driven by supply chain bottlenecks, in 2022 prompted central banks around the world to aggressively start hiking interest rates hurting stocks, in particular growth stocks which due to their higher valuation multiples and the nature of long duration earnings was hurt the most. On the contrary the cheaper part of the market held out relatively well as can be seen by the value style. In the US inflation reached a 40 year high above 9% in June which appears to have been the peak and eased to 6.5% in December. The strategy was overweight inflation sensitive sectors such as Energy and Materials, defensive sectors such as Consumer Staples and Healthcare and underweight economically sensitive sectors such as Consumer Discretionary and also underweight Information Technology and Communication Services. The more interest rate sensitive sectors of the market suffered from a central bank pivot from easy money policies in 2021 to interest rate increases. From a sector allocation perspective, fund benefited the most by being overweight in Energy and underweight in IT were the two single largest contributors.

On an individual security basis, largest contribution came from the Energy and Healthcare sectors. In Healthcare, Merck and Bristol Myers Squibb were the main contributors whereas on the Energy sector, Valero and Equinor were main contributors performance benefiting from higher prices on the oil and gas markets. On the other side of the equation, increased interest rates impacted the IT sector significantly and while a net underweight in the sector overall, the fund holdings in Mediatek and Samsung suffered. European medical equipment maker Koninklijke Philips suffered as a result of supply chain bottlenecks and an impairment charge taken to provision for a potential settlement in US courts.

## Investment Manager's Report (continued)

### Invesco Global Total Return Bond FAM Fund (the "Sub-Fund")

It was a challenging year for financial assets with surging inflation driving market turmoil. With consumer price growth rising to double-digit levels, central banks tightened monetary policy at an unprecedented rate. Their action prompted a sharp sell-off in global bond markets. However, calmer conditions prevailed in Q4 as encouraging signs began to emerge that inflation in the US and eurozone may have peaked, raising hopes that the US Federal Reserve and European Central Bank would reduce the pace of expected rate hikes in 2023. However, government bonds finished the year in negative territory. Corporate bonds also fell in value with the ICE BofA Global Corporate index returning -16.2% in euro terms and the ICE BofA High Yield index declining by 13.6% for 2022. Credit spreads widened from 100bps to 148bps for global investment grade bonds and from 373bps to 515bps for high yield bonds. With US and eurozone government bond yields rising, interest rate risk (duration) was the main detractor from performance. Currency costs associated with hedging most of the Portfolio's non-euro exposure was also negative although this was offset by higher underlying yields from these bonds. Although spreads widened over the year, credit was a positive contributor with corporate hybrids and investment grade bonds leading the gains. In terms of individual holdings, the largest detractors were all long-dated government bonds issued by the US, Germany and France. The biggest contributors were US Treasury Inflation Protected Securities (these bonds help to hedge against inflation risk because they increase in value during inflationary periods), a long-dated UK government bond (which we bought at a significant discount to par during the turmoil resulting from the UK government's unfunded mini-budget) and a US dollar-denominated sovereign bond issued by Argentina. Given the significant repricing in bond markets over recent months we utilised the Portfolio's strong liquidity position (cash, government bonds and bonds with maturities less than one year) to increase exposure to credit, particularly in investment grade corporates. The allocation to subordinated financials and corporate hybrids was also increased, unlike high yield where we remain more cautious. Emerging markets is another area which we believe offers attractive opportunities with our preference being local currency bonds from countries where we think are coming to the end of their rate hiking cycle, for example Latin American ones and South Africa. The Portfolio's largest allocation is to developed market government bonds. Alongside conventional government exposure, the portfolio has an allocation to US Treasury Inflation Protected Securities (TIPS). To benefit from the additional yield available, the portfolio currently has exposure to corporate, Italian government and emerging market bonds. Corporate bond exposure includes holdings in financials. Modified duration was increased from 2.6 to 4.8 over the period after peaking at 5.6 at the end of October. The Portfolio returned -5.9% (net return) over the one-year period to the end of December 2022.

## Investment Manager's Report (continued)

### Nordea Stable Performance FAM Fund (the "Sub-Fund")

The Nordea Stable Performance FAM fund delivered a negative performance of -6.82% (gross of fees)<sup>1</sup> in 2022. From a relative perspective, it outperformed traditional 60/40 allocations down about -18%, with stocks and bonds falling in almost similar proportion. It was a difficult year, with sharp markets' regime shifts and main asset classes posting significant losses. Such mayhem was due to an accumulation of black swans, from war in Ukraine driving up commodity prices, 40-year high inflation, along with key central banks initiating monetary tightening and interest rates hikes to fight inflation. In fact, on both sides of the Atlantic, inflation accelerated to peak at 9.1% in the United States (June) and 10.6% in the euro zone (October). The interest rate hikes needed to reduce it fueled growing recession fears. In contrast with the sentiment driven first quarter, it has led to sudden changes in market regimes, a dispersion of performance between and within asset classes, as well as high and fluctuating volatility. In such uncertain environment, each attempt for main asset classes to rebound in the third and fourth quarter was short-lived and followed by a selloff, as the Fed and the ECB reemphasized their determination to fight inflation, even at the cost of recession. During 2022, equities have faced rough waters, with US indices posting their worst performance since 2008. Developed markets slightly underperformed their emerging peers, while European equities outperforming the US ones. Style-wise, Value has largely towered above Growth, with a massive relative outperformance of 23%, slightly shy of 2000's record when the "dotcom bubble" started to burst. As for the sectors, energy was the only one to be positive with a rally driven by the war in Ukraine and the sanctions against Russia, while communication services suffered the most. Against this backdrop, the fund's equity component moderately detracted from performance with its developed markets exposure, while its emerging one posted a small positive return. Moreover, the Stable/Low Risk Equities the fund invests in have consistently outperformed the market and generated alpha, which was particularly strong in December. This was key to diversifying the portfolio, limiting the impact of extreme market movements. Furthermore, the Momentum strategy, used to reduce net equity exposure when risks are high, had a positive contribution, offering protection during the tumbles of the third and fourth quarters, thus reducing portfolio's volatility. Within the fixed income space, sovereign yields were trending higher on both sides of the Atlantic, with now US and European curves being inverted. While US yields were multiplied by 6 to 2.5 times respectively for 2 and 10 years maturities, their European counterparts returned to positive territory with the entire curve above 2%. These movements were fueled by inflation's surge. In 2022, the exposure to duration has been partly increased compared to last year, due to a more attractive risk/return trade-off and growing diversification potential, particularly in the US, where inflation is starting to slow with six consecutive months of decline. Over the year, Duration suffered the most, although it stabilized during the last quarter with rising recession risks. Moreover, the open currency positions in high quality G10 FXs (coming from both the FX Valuation & Quality and Cross Assets Anti-Beta strategies) posted a slightly negative performance. However, they offered diversification and performance during a volatile third quarter, while giving back a part of the accumulated gains in the last one. Among the open currency positions, the long exposure to USD vs. EUR stood out.

- The portfolio's modified duration was 1.9 years at the end of December 2022. In 2022, the exposure to duration has been partly increased compared to last year, due to a more attractive risk/return trade-off and growing diversification potential. As it's been the case for some years now, the management team continues to be more positive on US than Europe due to the more attractive risk-reward profile within the relative yield curves. Net equity exposure has decreased from 56.1% at the end of 2021 to around 48.3% at the end of December 2022 (mainly DM Equities), while the fund's beta vs global equities remains fairly low at 0.3. Currency-wise, the fund continues to be mostly hedged to EUR. The management team continues to prefer high quality currencies offering good valuation with strong diversification. Some examples of the actively managed currencies in the FX Valuation & Quality strategy include long JPY or USD, as well as short AUD or CAD.

## **Investment Manager’s Report (continued)**

### **Fineco AM Euro Credit Bond Fund (the “Sub-Fund”)**

The Fineco AM Euro Credit Bond Fund was internalised in June 2021, having previously been managed by HSBC Asset Management. For the full year, the Fund had a total return net of fees of -15.61%.

In broad terms, the Fund’s performance tended to be led by rates exposure and a generally more concentrated portfolio. One strategy employed by the Fund was to actively trade and reshape duration exposure, to manage downside volatility. This was very challenging against the prevailing risk backdrop throughout 2022, whereby expectations around Central Banks were subject to material shifts which led to gapping price action. Throughout the year, the Fund maintained a higher average yield than that of its benchmark, and on average had a higher credit rating profile.

The Fund was particularly active in both primary and secondary markets. In terms of primary activity, the Fund maintained strict price discipline when considering new transactions, mindful to achieve the best possible entry points for new exposures and not overpay versus secondary curves. The Fund was also active in derivatives, namely iTraxx Main and Crossover.

## **Investment Manager’s Report (continued)**

### **Euro High Yield Bond FAM Fund (the “Sub-Fund”)**

Markets battled with soaring inflation, unprecedented interest rate hikes by central banks and a subsequent synchronized slowdown in global economic activity. Russia’s invasion of Ukraine, supply chain disruptions, an energy crisis in Europe and COVID-19 related lockdowns in China earlier in the year exacerbated an already challenging macroeconomic backdrop. However, markets recovered some lost ground towards the end of the year, as investors bet on easing inflation and slowing growth, which could eventually force global central banks to pursue a slower pace of tightening. Markets fell further in the last few weeks of the year amid worries that easing mobility restrictions and a complete reopening of China could keep inflation higher for longer. Nevertheless, the European Central Bank (ECB) and the Bank of England (BoE) stuck to a hawkish stance and delivered several interest rate hikes over the period, with a clear prioritisation of inflation at the cost of growth. In turn, benchmark 10-year sovereign yields touched multi-year highs. The fund posted negative returns but outperformed the comparative index over the review period. Consistent with the aims of the investment process, security selection strongly contributed to performance. In this respect holdings in Spanish communication company Cellnex and French telecom company Orange SA were among the top contributors to performance. Holdings in defensive issuers such as Grifols SA and Bayer AG also supported performance. Income returns had a small negative impact on performance, while interest rate risk was closely in line with the fund’s reference index.

## Investment Manager's Report (continued)

### European High Yield Bond FAM Fund (the "Sub-Fund")

Over the past year, the global high yield market has experienced weakness in all regions. A variety of factors, including persistent inflation fears, geopolitical tensions and central bank tightening have contributed to the overall market weakness. The European high yield market underperformed the US high yield market, and generated a negative total return of -11.55% (in EUR) for the year which was driven by both higher rates and spread widening. The OAS spreads ended the year at 511 bps, which was 174 bps wider than the end of the previous year. In terms of rating buckets, triple Cs widened the most (+728 bps), followed by single Bs (+205 bps) and double Bs (+115 bps). The US high yield market had a negative total return of -11.22% on a local basis, with spreads widening by +171 bps to close the year at an OAS spread of 481 bps. Emerging markets high yield closed the year with a total return of -12.09%, underperforming developed markets high yield.

### PORTFOLIO REVIEW:

Early in the year, we started to restructure the portfolio to gradually align it with our HY strategy. We gradually aligned the exposure towards financials, and also made a few changes in the CCC bucket by switching out of names we did not like from a liquidity perspective. Early March we started to de-risk the portfolio and took profit in low rated bonds that we screened to have performed well. We reduced our exposure towards European real estate and also towards names with less pricing power whose earnings we believe to be more strongly impacted by cost inflation. Then going into Q2, we maintained a cautious stance amid continued volatility. We opportunistically sold out of smaller low conviction positions, names with refinancing needs, and also continued to reduce our CCC exposure. We maintained our cautious stance throughout the second half of the year due to the heightened volatility associated with the push and pull of global rates and economic growth. We continued to skew our portfolio towards higher quality. In Q3 we further trimmed our exposure to European real estate, CCC names, alongside other names we either didn't like the risk reward or didn't see further upside, to monetize on the strong market rally early in the quarter. To partly balance that out, we reduced our underweight in financials and added on some defensive names. In Q4, we reduce our exposure in the automotive sector and also gradually sold all of our debt collectors exposure during the quarter.

### PERFORMANCE ANALYSIS:

The fund outperformed the benchmark by 126bps (gross performance). This outperformance is primarily driven by the conservative positioning of the portfolio over the year.

## **Investment Manager's Report (continued)**

### **Emerging Markets Debt FAM Fund (the "Sub-Fund")**

Fund performance in 2022 was negative and behind the reference index, despite much better (and positive) portfolio performance in H2. Despite a rebound in the last quarter of the year, emerging market debt suffered one of its worst ever years in 2022, due to a combination of recession fears in Western economies; China lockdowns; and Russia's invasion of Ukraine early in the period which showed no signs of ending by year-end. In H1 hard currency assets underperformed their local currency counterparts due to faster US interest rate rises than previously signalled and a stronger US dollar, which worked against the fund. In H2 local currency debt once again outperformed its hard currency counterpart. Top contributors over the year included Guatemala and Romania while top detractors included Pakistan and Ecuador.

# FAM Series UCITS ICAV

## Investment Manager's Report (continued)

### Vontobel Emerging Markets Debt FAM Fund (the "Sub-Fund")

We've observed three waves of risk aversion this year starting in Spring with the Russian invasion of Ukraine. After a brief recovery after the initial shock, eyes turned towards renewed Covid lockdowns in China, renewed tension in commodities markets and a more broad "cost of living crisis" that really started to bite during the summer months. This was the second wave of risk aversion. A certain complacency returned over the latter part of summer as market participants started pricing a more dovish pivot from central banks who had been turning the screws since the start of the year, but these hopes were dashed by a hawkish Jackson Hole and subsequent poor inflation readings/re-hawkish Fed messages through September, as well as "disappointing" China party congress end October, constituting the third risk off wave of the year. However, market sentiment improved quite considerably in late Autumn/early Winter as China was pushed to revisit and abolish its zero covid policy, as well as start reflate its economy, starting with the real estate sector. Moreover, inflation figures in many developed market countries (and specifically the US) started to cool, leading market participants to anticipate less hawkish central bank policy. Risk assets rallied as interest rates and the USD softened markedly. In terms of emerging markets sovereign hard currency debt, absolute market performance was challenged in 2022 during which period the JP Morgan EMBI delivered a return of -17.8% in USD (ticker JPGCCOMP). This was made up of three negative quarters (Q1, 2 & 3) and one positive quarter (Q4). In terms of contributors to the year to date of the absolute negative performance of -17.8%, the bulk of the negative performance came from interest rate movements. The spreads sub index of the EMBI also delivered a negative performance (-4.4% in USD), but less significant than the negative contribution of rates (-14%). The initial hit to the spreads sub index took place with the Russian invasion of Ukraine in February then oscillated around low levels with the ebbs and flows of the other risk waves (and recoveries) described supra. Nevertheless, green shoots of recovery appeared to be taking place from Autumn as a number of risks which had been weighing on sentiment (War, US monetary policy, Chinese Covid) looked to be easing and spreads performed well in Q4 accordingly. As regards the FAM Vontobel Fund – Emerging Markets Debt (I share class EUR hedged, ticker VOEMDIH), the net performance for 2022 (to 30.12.2022, ISIN LU0926440222, net of fees) amounted to -21.9% on an absolute basis, underperforming the benchmark by -1.8%. In terms of the relative performance trajectory of the fund compared to the benchmark; the portfolio underperformed (as can be expected given the spread optimization approach) in each of the three risk aversion waves described supra. The portfolio did bounce back strongly after the Ukraine invasion and relative net performance was actually positive YTD as of mid-May compared to the benchmark. However, the second wave of risk aversion during the summer "cost of living crisis" had a significant negative impact on higher yield/lower quality countries. This was the period when the portfolio underperformed the most this year. The third risk aversion period caused another smaller relative performance trough, before a period of sustained risk appetite and outperformance of high yield/Frontier market, EUR denominated sovereign debt and Chinese real estate (Corporate) exposure allowed the portfolio to markedly outperform the benchmark in Q4, and thus limit relative underperformance in a hostile year for credit spreads and risk sentiment. Over the year, country allocation delivered the bulk of the negative relative performance. Bond selection was also negative. Duration/yield curve contributed positively too thanks to the broadly underweight duration in a rising rate environment. In terms of country allocation, there was a bit of a barbell between best and worst performing country. At the start of the year, the portfolio was running a large underweight in Russia (largest country allocation contributor), and Belarus, whilst it was at the same time running a sizeable overweight in Ukraine (largest country allocation detractor). Other than the above, most of the out/under performances relative to benchmark were in the HY space. On the negative side, country allocation was also affected by some idio-synchractic stories such as Ghana (officially defaulted in Autumn on its Eurobonds), Lebanon continued to suffer and we observed a corporate default in Luxembourg (a DM domiciled company exposed to emerging markets). Indeed, as described, high yield was particularly affected during the "cost of living" sell off of summer 2022, which exacerbated some price actions. Thus said, the "high yield rally" at the end of the year certainly reduced this negative impact. Indeed, exposures to countries such as Bahamas, which had been negative all year, actually turned positive into the year end. Positive performances also came from countries in which we'd reinforced/taken positions a bit later in the year and which benefitted from the rebound, such as Pakistan. Negative bond selection was to a large extent concentrated in Ukraine where the GDP warrant was particularly affected by the invasion, and to a lesser extent in Colombia (Credivalores) where a corporate issuer was affected "by association" by defaults in the same non-bank financial sector in Mexico. This was to some degree mitigated by positive bond selection in Russia, China (real estate) and Mexico.

**March 2023**

# FAM Series UCITS ICAV

## Investment Manager's Report (continued)

### Jupiter Flexible Income FAM Fund (the "Sub-Fund")

The year began on a sour note, with the equity markets falling sharply due to the US Federal Reserve's hawkish tone. Risk assets continued to face pressure in February due to expectations of monetary tightening, with the Ukraine crisis exacerbating the situation. The earlier part of March had a stagflationary feel about it. The markets saw a big turnaround in the latter part of March due to a combination of hopes of deescalation in Ukraine and reasonable economic data. At the start of April, markets continued to reprice policy support as spiralling inflation sent interest rate expectations higher. In May, equities sold off due to a combination of worries about China and some disappointing sales figures from bellwether US consumer companies. Global equities fell sharply in June, credit spreads widened significantly, and the US dollar continued to rise during the month. The third quarter was an extremely complex one for fixed income markets. The key theme was a renewed hawkish posture from global central banks and especially the US Federal Reserve. Liz Truss's attempt to kindle the economy through unfunded fiscal expenditure spurred Gilt yields sharply higher towards the end of that quarter. October was a relatively diverse month for financial markets, with two distinct parts. The first half of the month was characterized by weak sentiment and rising yields as CPI numbers came higher than expected in the United States. The second half of the month, however, saw markets romancing once more with a possible Fed pivot. In November, the key market mover was the US CPI. Market reaction was extremely strong. Government bonds closed the month in positive territory, with yields ending lower across most of regions and especially in the United States and the United Kingdom. Credit markets also delivered robust returns across the board, with spreads tightening in most market segments. If markets hoped for a quiet end to the year, the principal central banks had other ideas. The European Central Bank's (ECB) much more aggressive "higher for longer" approach to interest rate rises caught many investors off guard, particularly in fixed income. The Bank of Japan (BoJ) too announced a major shift in its policy goal posts as the relentless pressure on the yen drove up the price of energy imports. The BoJ was forced to accept that its unilateral stance of managing monetary policy without raising interest rates was unsustainable. The strategy struggled during the first quarter. The key detractor in January was US equities, predominantly S&P futures, although we were able to cushion some of the losses with short Russell and Nasdaq futures as the volatility continued. Although we reduced risk in January, our preference for European assets (driven by diverging monetary policy) hurt in February as the Russia-Ukraine crisis caused Europe to underperform materially. The bad run continued in March. We shifted exposure away from the US in favour of Europe and Asia, expecting non-US assets to outperform thanks to relatively looser liquidity. Instead, a combination of the escalation of the war (which like many we didn't expect) and continued weak data and relatively hawkish policy from China, caused Europe and Asia to underperform. The most significant contributor in April was FX. Alternatives also had a strong month, in particular infrastructure but also energy and REITs. The key detractors were equities: while our UK overweight outperformed, we underperformed in the US and in Asia. The strategy underperformed in May: the primary driver was duration. We had added to duration given our expectation that yields would fall as recession risks increased and the Fed is likely to be unable to achieve all the hikes that are priced. In June, the main detractor to performance in June was alternatives, where diversifying income-baskets of stocks with exposure to energy and agriculture, gave up much of the year's gains as commodities dived. In fixed income, duration modestly detracted overall. High yield detracted in absolute terms. Flexible Income underperformed the peer group in July given the broad underweight risk posture (especially equities). The key drivers of relative underperformance were an overall underweight to equities, particularly in Europe, and in Asia where we had some long exposure to China in the expectation of further stimulus which did not arrive. In August, the strategy performed strongly in relative terms. Our long USD positioning made a positive contribution, as it has been for much of this year. Equity performance was broadly flat: a large positive contribution from European equity hedges was offset by long positioning in the US, UK and Japan. A The strategy modestly underperformed the peer group in September. Key detractors were US equity futures, alternatives, and duration as markets sold off. The portfolio underperformed in October. The biggest negative contribution came from our short position in UK gilts, given the strong recovery induced by the new government. Our shorts on the GBP was also a negative contribution. The strategy underperformed slightly in November. Positive contributions came from our exposure to risk assets, in particular exposure to US equities, UK equities, HY bonds and bank capital were major contributors. Long exposure to government bonds (US and Austria) contributed positively as well. Negative contributions came instead from our long USD and CAD FX exposure and short GBP FX exposure as a from our short exposure to European equities. Inflation seems to be over its hump; the question now is how enduring it is and where it pitches in relation to the central banks' targets of 2%; only then will we really know how long it will be before interest rates peak, and when they then begin to come down again. China has significantly relaxed its zero-tolerance to covid in response to civil unrest and it remains to be seen how an under-vaccinated population reacts as the virus runs rampant with a mortality rate likely to be significantly greater than any official data made public to the West.

## Investment Manager's Report (continued)

### Infusive Consumer Alpha Global Leaders FAM Fund (the "Sub-Fund")

For broad equity markets, 2022 was a challenging year. The MSCI All Country World Index ("MSCI ACWI") peaked on the fourth of January, before beginning a steady downward move throughout the year. Early in the year the focus was entirely on inflation and the prospects of rising rates, but ultimately came to include worries about economic growth and a potential recession. Despite a challenging backdrop, the consumer remained fairly resilient throughout the year thanks to significant pent up savings from during the pandemic period and a labor market that remained strong despite the macroeconomic concerns. Below we'll review some of the key dynamics in the market each quarter. The Fund's total performance in 2022 was -22.8%, which compares unfavorably to the MSCI ACWI which was down -17.9% for the year. The key challenges we faced were (1) a heavy exposure to long duration equities that were most pressured in a year of rapidly rising interest rates and (2) an RMP that was ineffective at protecting the Long Book from the broad downside move in equity markets.

Recognizing these issues and expecting a challenging year for equities, we took actions throughout the first quarter to better position the Fund to outperform in the remainder of the year. As a result of these changes, we ended the year with a high concentration of the Fund in our best-in-class, Consumer Alpha™ companies that are defensive thanks to their significant cash flow generation and steady consumer demand. Additionally, we have maintained a lower than typical net exposure. After making these changes we have seen outperformance relative to the broad equity market. For reference, since the end of Q1 2022, the Fund was down -8.3% through the end of 2022 while the MSCI ACWI was down -13.4%, demonstrating the relative outperformance since those adjustments.

#### First Quarter

The first quarter saw the MSCI ACWI fall -5.2% and there were major developments across a few key themes. First, with respect to inflation. The cost of everything had been rapidly rising since the middle of 2021 driven by a list of factors including excessive fiscal and monetary stimulus, supply chain issues and shortages, the reopening of the global economy post covid shutdowns, and tight labor markets and rising wages. Then came the Russian invasion of Ukraine which was a tragic event. This further exacerbated the rise of inflation as sanctions and supply chain disruptions resulted in spiking food and energy costs. Headline inflation in the U.S. (CPI) reached +8.5% in March, which was squeezing consumers and raising costs for companies. The second ongoing theme was rising interest rates. Driven by the inflation and central banks around the world needing to reign in prices, we saw a dramatic rise in yields. The 10Y U.S. Treasury was yielding 1.5% at the start of the year and rose to 2.3% by quarter end with expectations for ongoing rate hikes. That has caused a negative de-rating of many long duration assets like growth stocks, which hurt their market values.

During the first quarter of 2022, the Long Book was down -14.5% as it faced a number of headwinds that weighed materially on performance. The major challenge was the rapid rise in interest rates that had a negative impact on the valuation of our longer duration investments. This is not unique to just hyper growth or unprofitable tech companies, but rather impacts any company that has a long runway for growth and thus a greater proportion of value sitting in more distant cash flows relative to a no growth asset. Given the quality and durability of growth at Consumer Alpha™ companies, the majority of our portfolio saw nontrivial reductions in valuations.

Additionally, our exposure to discretionary sectors was a headwind as inflation, uncertainty, and falling consumer confidence all weighed on these sectors. Finally, our exposure to European companies and companies that derive sales from Europe (including many of our consumer staples companies) were under pressure due to worries about consumer spending given the war in Eastern Europe and spiking inflation.

#### Second Quarter

During the second quarter, the MSCI ACWI fell -15.5% as a number of headwinds continued to challenge global equity markets. First, inflation remained very elevated, and the U.S. CPI ultimately peaked at 9.1% in June. Persistently high inflation throughout the quarter drove interest rates up, which had a negative impact on valuations. For reference, the yield on the 10Y UST rose from 2.3% at the end of March to 3.0% at the end of June. This was a major factor in the decline of the S&P 500's NTM PE ratio from 19.6x at the end of March to 15.9x at the end of June, which weighed heavily on equity prices. At the consumption level, stubbornly high inflation means a larger share of wallet is going toward spending on everyday things like groceries and gas, and thereby crowding out less necessary purchase.

# FAM Series UCITS ICAV

## Investment Manager's Report (continued)

### Infusive Consumer Alpha Global Leaders FAM Fund (the "Sub-Fund") (continued)

#### Second Quarter (continued)

As troubling as high inflation was to the market, by the end of the quarter there was increasing concern around the likelihood and severity of a recession or serious growth slowdown. Consensus expectations for real GDP growth had been revised down to +2.4% in 2022 (with the fastest growth in H1) and +1.8% in 2023 (which compares to +5.7% in 2021). The reality is that rapidly tightening financial conditions and high input cost inflation was going to slow economic growth.

During the second quarter, our Long Book was down -9.3%. While this was a poor absolute performance in the quarter, given the worse drawdown seen by broad equity markets, this was a satisfactory outcome. A positive driver of performance was our consumer staples exposure. In fact, the top four contributors (British American Tobacco, Coca-Cola, Kirin, and Nestle) are all stable, highly cash generative, consumer staples companies. It should also be noted that our holding of cash in the quarter was a positive factor in our performance given the down market we experienced.

On the negative contributor during the 2nd quarter, we had the consumer discretionary and tech companies including Amazon, Alphabet, Apple, and Meta in the bottom four. The market environment for these sectors was very difficult given the uncertainty facing the economy. For reference, the MSCI ACWI Consumer Discretionary Index was down -20.2% in the quarter and the MSCI ACWI Communication Services Index was down -18.1% in the quarter. Against that weak performance in key sectors we invest in, we were content with the overall performance.

#### Third Quarter

During the third quarter of 2022, the MSCI ACWI fell -6.7% in a volatile quarter as the market was again dominated by debate around inflation and the path of central banks, particularly the U.S. Federal Reserve. In the first half of the quarter, the market was supported by a growing view that U.S. CPI peaked in June at 9.1%, and that as inflation cooled the Fed would "pivot" and be cutting rates early in 2023. In mid-August, the market expected 3.6% peak Fed Funds rate in 2023 and projected a year end 2023 level of 3.1%. This helped to drive the MSCI ACWI up +11% between the start of the quarter and 16-August. However, Chairman Powell's commentary at Jackson Hole, and again at the September Fed meeting, made it clear that there would be no pivot and, in fact, that the Fed was committed to rapidly raising rates even if it caused some pain in the economy. Given these comments, at quarter end the market was expecting 4.5% peak rate in 2023 and a year end 2023 level of 4.3%, which helped reverse the early quarter gains and put the MSCI ACWI down for the full quarter.

Despite several macroeconomic headwinds, the consumer remained resilient in the quarter as they had in the first half of the year. This was bolstered by the consumer's healthy position entering the year, including effectively full employment, a high level of wealth, and reasonable levels of debt. The U.S. consumer's strength could be seen in the continued growth in real (inflation adjusted) personal consumption expenditures throughout the year.

During the third quarter, our Long Book was down -4.1%. This was not inspiring in absolute terms but it was at least ahead of the broader global equity market. Performance benefited from holding cash and our higher exposure to our strongest companies. Our top five contributors were a collection of Consumer Alpha™ champions including Titan, Diageo, Apple, Starbucks, and Hermes.

On the negative side, we saw weakness from companies with significant exposure to China, given the surprising resumption of lock downs and strict zero covid policy, as well as continued weakness in tech names. The top detractors were Alibaba, Estee Lauder, Meta Platforms, Alphabet, and JD.com.

## Investment Manager's Report (continued)

### Infusive Consumer Alpha Global Leaders FAM Fund (the "Sub-Fund") (continued)

#### Fourth Quarter

During the fourth quarter of 2022, the MSCI ACWI was up +9.9% in the quarter after reaching its low point for the year in mid-October. Coinciding with the trough in the Index was the release of U.S. CPI for September which was higher than expected and in fact the core CPI reading of 6.6% was the highest of the current cycle. After this data point, the Fed funds futures priced in a 5.0% terminal rate. However, in the balance of the quarter, the two U.S. CPI releases showed a continued moderation in inflation and each print was below expectations. Slowing inflation helped the market get increasingly comfortable with the idea that the Fed would be close to its peak in rate hikes, and the Fed funds futures still priced in a 5.0% terminal rate at the end of the quarter. This easing inflation narrative helped drive the upside in the equity market in the after making its year to date low.

As we had seen all year, the consumer largely remained resilient in the quarter. They still had a healthy balance sheet and employment was robust with just 3.5% unemployment in U.S. at year end. Despite the macroeconomic headwinds, the consumer continued to grow its real personal consumption expenditures on a 3 year CAGR basis in the +2.5-3.0% range (not dissimilar from pre pandemic trends), as it has all year. That said, the consumer is not a uniform group and there were pockets of weakness in places like the lower end consumer and in discretionary spending. This was translating into some evidence of trading down by the consumer and a reprioritization away from discretionary spending (if not discounted), which created an environment where consumer loyalty and that emotional connection was more important than ever – a good for Consumer Alpha™ companies.

During the fourth quarter our Long Book was up +5.7%. This performance was below the broader equity market but given the investment level was ~60% throughout the quarter, with the balance in cash, this is not a surprising outcome. Given our views on the attractiveness of equity markets at large, this was a conscious decision.

Our top five contributors were several Consumer Alpha™ champions including Richemont, Netflix, TJX, Nike, and McDonald's. These strong contributors represent a few ongoing themes including the beginning of a reopening in China, idiosyncratic growth stories, and the importance of delivering good value to the consumer in times of uncertainty.

On the negative side, we saw ongoing weakness in our large tech companies and several of our China single name options experienced weakness before we closed those positions as explained more below. The top detractors were Amazon, PayPal, Meta, JD.com, and Wuliangye.

## Investment Manager's Report (continued)

### Fidelity Sustainable Water and Waste FAM Fund (the "Sub-Fund")

#### Performance

The fund recorded returns of -28.7%, while the comparative index delivered -18.4% over 2022. At an industry level, security selection in industrials and materials detracted from returns. Market selection had a positive impact on performance within the consumer discretionary sector, while the underweight stance in information technology also added relative value. Selected positions weighed on performance: Azek (a leading manufacturer of environmentally sustainable building products and decking) detracted from value. Its shares sold off due to weak investor sentiment surrounding the rising rate environment and subsequent impact on names with housing/residential exposure. The company's new residential exposure is 15-20% of sales. However, the portfolio managers' view these risks as short term and the investment thesis has not changed; The group operates in an industry with high barriers to entry and enjoy strong competitive positions. The position in Crown Holdings, which makes products like aluminum and steel cans for food and beverages, fell. The packaging company posted solid top-line growth, but profits fell during the third quarter. It also slashed its full-year guidance as rising costs weighed on profits. The good news is that most of those challenges should be temporary, which means the stock should eventually bounce back, especially as underlying demand for its products has been strong. Japanese environmental machinery manufacturer Ebara Corp came under pressure despite reporting solid Q1 results and robust FY21 results which beat expectations, on strong sales and record level orders. In addition to being the largest manufacturer of industrial pumps and turbines, the company makes equipment used in semiconductor manufacturing. The stock therefore sold off given investor concerns surrounding the semiconductor sector (supply chain issues and peak semi cycle concerns). Notable contributors: Brazilian water utility Sabesp was the largest contributor to returns following reports that São Paulo state regulators will consider a proposed rate revision. The October 2022 Sao Paulo gubernatorial elections reignited the Sabesp privatisation theme, which is seen as being a key driver of stock returns. This led to the stock outperforming. Service Corp, the largest death care provider in the US and Canada, was another notable contributor. The business provides exposure to the waste management theme due to its cemetery, cremation, and funeral services, i.e., the disposal of human waste. Management is not expecting any earnings cut for either 2022 or 2023. Instead, they expect to meet this year's guidance and continue to deliver growth in an industry with high barriers to entry, strong pricing power and growth in earnings. This high-quality defensive position has performed well, given its defensive demand characteristics and dominant market position. Sales reflected a strong increase in year-on-year numbers in the cemetery and funerals segments. The lack of exposure to underperforming consumer discretionary names such as Amazon and Tesla, communication services groups Meta Platform and Alphabet as well as information technology stocks Nvidia, Microsoft and Apple also added to relative performance, as investors largely moved out of growth-oriented stocks during the year amid the ongoing economic uncertainty.

## Investment Manager's Report (continued)

### JPMorgan China A-Shares Opportunities FAM Fund (the "Sub-Fund")

The fund underperformed the falling market in 2022, primarily due to challenging first and third calendar quarters. During the second and fourth quarters the fund fared better in relative terms as the stimulus measures and relaxation of zero-Covid policy had a positive impact. The opening months of 2022 presented a highly challenging environment for an investment philosophy rooted in growth and quality. Russia's invasion of Ukraine boosted energy prices, in turn compounding the inflationary pressure suffered by much of the world (but not China) as most countries moved towards a more reflationary post-COVID environment. The resulting increase in interest rates caused "long duration" growth stocks to derate, while investors rotated into value names. Because of this the driver of the underperformance over the year was sector allocation, offset to some extent by positive stock selection later in 2022. The key detractors involved being overweight information technology and industrials, and underweight financials and energy. The market's bias away from new economy sectors was evident, but we retained conviction to avoid those sectors with weaker corporate governance, higher levels of government ownership, and inferior returns on capital. To some extent that view was vindicated in the fourth quarter, when two important policy moves resulted a change in market direction. First, in November the PBOC (central bank) and CBIRC (financial regulator) announced a comprehensive set of credit support measures for the real estate sector, exceeding market expectations. In essence this alleviated the systemic risk associated with real estate which had been worrying investors for some time. Even more importantly, in the closing weeks of the year the Chinese government effectively removed all COVID containment policies. The initial wave of resulting infections was faster than expected, such that by the end of December many large cities appeared already to have passed the initial peak of infection – but not of hospitalization. Despite some initial disruption to traffic and productivity, consumers began to look forward, with a budding recovery of consumption, traffic and business activities, and financial markets did the same. At the stock level, spirit manufacturer Wuliangye Yibin was a key detractor as weak holiday sales during the September-October period impacted the stock negatively. It recovered later in the year as the Covid restrictions were relaxed. Yunnan New Energy Materials detracted on the back of the news of some of its executives being taken to residential confinement. Initially during the year, semiconductor names Maxscend and Bestechnic fell as the market reacted negatively to the concerns over lockdown and the semi cycle turning. On the positive side, solar name Tongwei was the largest contributor as the stock rose as polysilicon prices continued to exceed expectations due to tight supply. Software name Beijing Kingsoft Office did well as market expectations received a boost post the 20th Party Congress, which highlighted the importance for self-sufficiency within the sector, together with availability of some low-cost financing. Zhejiang Supcon, an industrial automation name, did well as it delivered solid results with a strong end demand outlook. We retain our emphasis on longer term structural growth areas such as carbon transition, consumer and technology. Cyclically, later in the year we added to some beneficiaries of the reopening economy, for example in travel and leisure, whilst reallocating capital within the solar space from upstream to downstream names – as price declines afflicting the former may boost demand for the latter. China's focus on national security offers another area for attention, spanning opportunities such as energy, automation, digitisation and semiconductors – all fields in which China's government is determined to become more self-sufficient, at the same time as targeting higher productivity as the policy emphasis shifts from Zero COVID to stimulus of the economy. The post-reopening first wave swept across China much faster than authorities' expectations, something which may be further accelerated by massive movement of people around the Lunar New Year holidays. Near term disruptions to production, consumption and traffic are within expectations and we do not believe that negative effects such as loss of productivity and a reluctance to travel will be long-lived. Major cities which have been early to see a spike in post-COVID Zero infections have witnessed a rapid recovery of traffic. Looking forward through 2023, many policy and regulatory overhangs have been removed. The government must refocus on economic stability and growth. On balance global inflation pressures have been easing, suggesting no immediate need for more hawkish monetary policy in China. On the fiscal side China is once again resorting to stimulating investment, but it is also likely to do more to help consumption. Having lived through the past three difficult years, the mindsets of many corporates have changed, resulting in improvements in cost efficiency and capital allocation. We will be watching closely to assess if positive operating leverage will boost earnings through the recovery process, and whether the improved capital allocation will persist.

**March 2023**

# **FAM Series UCITS ICAV**

## **Investment Manager’s Report (continued)**

### **Diversity and Inclusion FAM Fund (the “Sub-Fund”)**

The fund delivered a relative outperformance versus the benchmark index, albeit still recording a substantial deficit in a very weak year amidst a generally more challenging backdrop for asset markets. However, this was an improvement on the first half of the year when the fund lagged the benchmark. Stock selection added value over the 12 months, while sector allocation detracted from performance. The latter was due to the portfolio’s zero weightings in energy and materials, along with an above-index position in the consumer discretionary sector which was affected by rising costs. However, the impact was partially offset through an above-index position in industrials, and below index positions in communication services and technology. The latter weakened as the market rotated away from growth stocks in response to rising interest rates. The main source of added value at the stock level came largely from stock picking within the banks and technology sectors – the latter largely reflecting stocks that were not held. Conversely, the fund’s healthcare positions made a negative contribution – again, mainly reflecting stocks that were not held. At the individual stock level, banks dominated the top contributors and included AIB Group, Bank of Georgia and HDFC Bank as their operating models benefited from a rising interest rate environment. Elsewhere, automotive, freight and outsourcing firm Bidvest continued to be supported by good results. In addition, not holding some of the behemoths such as Amazon, Tesla and Facebook owner Meta Platforms benefited the fund’s performance. The main detractors included US genetic sequencing firm Illumina, which fell on the back of disappointing earnings and the infringement of a rival’s DNA-sequencing patents. Other negative contributors included US engineering simulation software firm Ansys, which was caught up in the weakness in the technology sector, industrial group Schneider Electric and childcare provider Bright Horizons Family Solutions.

**M&G Investment Management Limited**  
**March 2023**

# **FAM Series UCITS ICAV**

## **Investment Manager's Report (continued)**

### **Global Listed Infrastructure FAM Fund (the "Sub-Fund")**

The fund provided downside protection in a falling market and outperformed the MSCI ACWI Net Return Index. PrairieSky Royalty added the most value in a buoyant energy sector. Gibson Energy, ONEOK and Keyera also outperformed. AES Corp outperformed in a strong year for US utilities. ContourGlobal, a transition company listed in the UK, jumped after receiving a takeover bid. Home REIT led the laggards after a weak fourth quarter. Enel underperformed in European utilities. Crown Castle, which is structured as a REIT, drifted lower in a real estate sector hampered by concerns about interest-rate sensitivity. We made two new purchases and two complete sales during the year. We initiated new holdings in Segro and Alexandria Real Estate, both structured as REITs, which provide exposure to structural growth in e-commerce and life sciences, respectively. The indiscriminate selling of stocks weighed down by perceived interest-rate sensitivity provided the buying opportunity. We sold ContourGlobal as a source of cash after the company received a takeover offer at a 36% premium. We divested China Gas Holdings due to corporate governance issues and operational shortcomings. Equity markets have succumbed to a renewed bout of volatility as hawkish commentary from central banks rekindled concerns about persistent inflation and a potential recession as the effects of higher interest rates take hold. Despite the ongoing uncertainty at the macro level, we strongly believe that short-term volatility presents long-term opportunity and remain as optimistic as ever about the long-term growth prospects in listed infrastructure. The asset class offers defensive qualities, combined with the ability to offer inflation protection by way of index-linked revenue, but the attractions of its reliable and growing cashflows have considerable appeal beyond the current environment. Listed infrastructure is a beneficiary of long-term structural trends, such as renewable energy, digital connectivity and demographics – powerful themes which we believe will endure for many decades to come. The attractions of infrastructure, particularly in the listed sphere, have not gone unnoticed. We have seen increasing corporate activity across the asset class, the most recent example being the interest from private equity in Vantage Towers, the European communications towers company spun off by Vodafone. We believe that these symbolic events provide a clear indication that the reliable and growing cashflows from infrastructure assets are going cheap in the stockmarket. Investors with a long-term time horizon, such as those in the private sphere, are starting to take notice and act on their convictions. We remain optimistic about the asset class.

## Investment Manager's Report (continued)

### European STARS Equity FAM Fund (the "Sub-Fund")

The European market ended down -9.49% in 2022 in a volatile and negative European equity market. However, this was a good comeback, as the European market was down close to -20% at the worst point by the end of September. The year was characterised by the beginning of the largest war in Europe since the Second World War, as Russia invaded Ukraine and at the same time used gas supply as a weapon to hit the European economy and unity. Luckily the European continent and NATO moved together to support Ukraine's fight against the aggressor and warm weather, LNG-supply and substitution, and lower consumption of natural gas have helped reduce the impact on the economy. The year was also characterised by high inflation, which led global central banks to raise interest rate aggressively and rapidly, and this has had profound implications for fixed income markets. At the peak (in the beginning of 2021), close to 15 trillion USD worth of debt globally was negatively yielding but by the end of 2022 this number fell to zero. According to Deutsche Bank, the US 10 year Treasury had its worst year in 2022 since 1787, being down close to -20%! The bursting bobble in the fixed income space had negative effects for the overall equity market and led to a large rotation in the market. We saw especially interest sensitive growth stocks underperforming massively over the year, while value stocks did much better – this was a large reversal of what we have seen the last decade. The best sectors in Europe were Energy and Financials while the worst were Information Technology and Real Estate. Looking at European Equities from a global perspective, 2022 was also a reversal of what had been previously seen, as MSCI Europe outperformed MSC ACWI ex Europe by more than +400bps and also outperformed MSCI US. In Q4 alone MSCI Europe outperformed by more than +1.000bps! The reason for the outperformance is multifold, firstly Europe has low exposure to interest sensitive mega cap technology companies and is overindexed on value companies. Secondly, the valuation starting point in Europe was (and is still today) much more attractive than in other regions and thirdly, Europe is home to many companies that are positively positioned towards the green transition, which got accelerated in 2022. We are firm believers that the outperformance of European equities can continue into 2023 and find European equities attractive in a global perspective. The underperformance was due to negative attribution from both stock selection and sector allocation. The strategy was hit in particular by unfavourable stock picks in Consumer Discretionary (-197 bps) and Consumer Staples (-131 bps), whereas it benefitted from good stock picks in Materials (+129 bps) and Communication Services (+114 bps). In terms of sector allocation, the strategy was negatively affected by being underweight Energy (-210 bps) and over-weight Information Technology (-35 bps), but was rewarded by the underweights in Consumer Discretionary (+55 bps) and in Real Estate (+36 bps). Top 3 contributors: AstraZeneca PLC, the pharmaceutical company, outperformed the market in 2022, as the market favoured defensive companies with low starting valuation and inflation protection. At the same time AstraZeneca continued to deliver strongly on its strong pipeline and delivered good organic sales and earnings growth throughout the year. Deutsche Telekom AG, the telecom operator, Deutsche Telekom outperformed the market in 2022, as the market favoured defensive companies with low starting valuation. At the same time Deutsche Telekom benefitted from a strong USD and strong performance in the US T-Mobile business where it has a material ownership. Norsk Hydro ASA, the Norwegian producer of aluminium, shares outperformed during 2022, as the company benefitted from its structurally positive competitive position with access to cheap renewable energy. The direct aluminium competitors, especially in Europe, have on the other hand faced increasing energy costs from the gas shortage situation, which has led to closure of several aluminium plants. Furthermore, Norsk Hydro benefits from a stronger ESG focus in China, which means that fewer new aluminium plants are getting open which helps improve global supply and demand dynamics and increase localisation of production. Bottom 3 contributors: KION Group AG, the warehouse automation and forklift company, underperformed the market in 2022, as in-creasing steel prices, component supply shortages and especially badly managed contracts in its warehouse automation business led to a large profit warning. The profit warning created question marks around the strength of the balance sheet and a capital raise was discussed in the market putting further pressure on the shares. During the end of the year the market got more confidence in that a capital raise is unlikely, which helped the stock to recover a bit, but it still ended significantly down for the year. Zur Rose Group AG, the e-pharmacy company, underperformed the market in 2022 as the e-script project was postponed. This led to questions around the strength of the balance sheet despite that the company was raising new money during the year and this put pressure on the shares. In spite of having a large potential as an e-script enabler in the German pharmacy industry, the roadmap towards implementation became difficult short-term be-cause of challenging of the project from the stakeholders. Puma SE, the German producer of sporting goods, underperformed the market in 2022 despite limited cut to sales and profitability forecasts. The sentiment towards Puma and the sector was however negatively impacted for several reasons over the course of 2022. In the beginning of the year covid-related supply chain problems in South East Asia hit the company, this was followed by general negative sentiment from Chinese consumers towards western sport brands, the loss of the well-regarded CEO to the key competitor Adidas and lastly the weak consumer confidence in especially Europe hit the shares.

# FAM Series UCITS ICAV

## Investment Manager's Report (continued)

### European STARS Equity FAM Fund (the "Sub-Fund") (continued)

**Buys:** Cie Financiere Richemont: The fund initiated a position in the Swiss luxury jewellery company Richemont. The company owns some of the best jewellery and Swiss watch brands including the biggest global jewellery brand Cartier. Jewellery is an attractive category, which has grown strongly in the last decades and which should continue to grow strongly. Compared to the past, jewellery now makes up a large proportion of the sale/profit split in the group and is hence a more significant driver of long-term growth and especially profit. Jewellery is largely an "unbranded" industry and there is lots of room for brands to take share. Richemont is also positively positioned to Chinese re-opening/pent-up Covid spend. **Essity B:** We entered into a position in Essity, the Swedish producer of health and hygiene products. The company has been hit hard by increasing electricity and pulp prices, which has created an attractive expectation gap as the company's price increases come through the P&L and input costs roll-over. **Symrise** We re-initiated a position in the ingredients company Symrise. We fundamentally still liked Symrise when we sold it in the end of 2021, but we found the valuation too demanding. Post unchanged fundamentals, rising earnings and a falling stock price we now find the case attractive again. **Cie De Saint-Gobain:** The fund re-initiated a position in the French building materials manufacturer and supplier, Saint-Gobain. The company benefits from "ESG demand" driven by European energy renovation and the European green deal. Furthermore, a clean-up of the company's portfolio is positive for long-term company returns. **National Grid:** We entered into a position in the UK utility company National Grid. The company is a beneficiary of green energy capex driven by the build out of the grid to support electrification of the society and more renewable energy in the energy mix. We have followed the company for long, but now find the valuation attractive post a sell-off in the utility space. **Prysmian:** Prysmian is the global leader in the power and telecom cable systems industry with a particularly strong position within the attractive high-voltage market. Power transmission is among the most important enablers of the energy transition, and we see the cable names including Prysmian as key beneficiaries of the push towards higher energy independence in Europe and the expansion of renewables globally. **Siemens:** We bought into Siemens in March, which offers an attractive valuation for its growth outlook. Siemens has in recent years cleaned up its portfolio, so it now has high exposure towards structural growth within automation and digitalization that is again driven by ESG policies. **Pandora:** Pandora has after a period of several difficult years restructured the company and brand position to become a more focused company in affordable jewellery with a good growth outlook. Pandora has also emerged as a leader in sustainable sourcing of raw materials for the production which means it scores well on ESG-metrics. We do not think that the positive development over the recent years is fully reflected in the valuation of the company today. **Elekta B:** We re-entered into Elekta, which produces radiation treatment machines for cancer, during February after a period on the side. We structurally like the story, as the company operates in a (sadly) growing market with an increasing number of global cancer patients. Furthermore, the market is consolidated with two large players that create good returns in the market. After several profit warnings due to Covid-19 and high logistics costs, we now find the valuation attractive and see a good expectations gap. **Societe Generale SA:** The French bank has restructured its operations during the last decade to a degree where we anticipate that they will generate an improving return of tangible equity over the coming years and narrow the gap with other banks. Despite the improving outlook, the valuation of the bank's shares are only at half the multiple of other banks. **Pirelli & C SpA:** The premium Italian tyre manufacturer is a beneficiary of the accelerating shift towards electric automotive vehicles as EVs require tyres with higher qualities due to the higher weight, instant torque (fast acceleration and breaking) and requirement for noise reduction. We do not believe that the current valuation reflects a structurally better demand outlook. **BT Group:** The integrated UK telecom operator is benefitting from having introduced CPI-linked contracts in the majority of their business at the same time as they have executed faster on the rollout of their fiber-option Openreach. Additionally, it is likely that the UK mobile market may move from a 4 player towards a 3 player market to the benefit of BT. **Compass Group:** The UK based contract catering company is seeing increasing outsourcing prospects from inhouse managed cantinas as a consequence of the rising inflationary outlook at the same time as new contract KPIs are becoming important for caterers to be able to execute on in terms of digital order solutions, ESG criteria, café- and vending machine options among others which adds to the competitive advantage of the largest providers by being able to better scale their solutions than inhouse managed alternatives. **Roche Holding:** We initiated a position in the pharmaceutical company Roche. The share price of Roche has underperformed other European pharmaceutical companies in the first half of 2022, as the company has seen Covid-19 benefits falling away and negative pipeline news questioning long-term growth. We believe that this underperformance is largely unjustified, as the company has a very large pipeline with good optionality and historically has been good at bringing new products to the market. We are therefore not overly concerned about the future growth outlook. **Sells:** **BT Group:** We sold out the position as the initial assumptions behind the investment case as a beneficiary of rising inflation are being questioned by the equity market on concerns about the ability to raise prices in the consumer division combined with an unclear strategy in the wholesale fibre division.

# FAM Series UCITS ICAV

## Investment Manager's Report (continued)

### European STARS Equity FAM Fund (the "Sub-Fund") (continued)

Sanofi: We sold out the position as we expect better prospects in other health care related companies. SKF B: Was disposed due to better expected prospects in other investments in the portfolio. Valeo: We sold out the position in Valeo, as we are concerned about a slow-down in auto demand. The company has made good progress in restructuring its operations during the Covid-19 period, but the rebound of auto demand and thereby profitability for Valeo have so far been delayed by shortages of semiconductor equipment. We are afraid that the slowdown of the economy now will make this auto cycle a "lost cycle" without demand coming back, which currently is not discounted by the market. Unilever: We sold out the position in Unilever post good relative performance of consumer staples companies in general and Unilever specifically. This outperformance is despite question marks around capital allocation policies post the attempt of the company to buy the peer Haleon (GSK Consumer Health). Zur Rose Group: Despite having a large potential for an e-script enabler in the German pharmacy industry, the roadmap towards implementation has been challenging by interference from all related stakeholders. As the company has limited financial resources available to endure a potential resolution to the stumbling blocks, we decided to dispose our investment to await any clarity before reconsidering commitment. Enel: The Italian utility company Enel was divested in August, as the gas-supply situation in Europe created several head-winds for the utility industry and as there were talks about new windfall taxes, funding stress in the power market and consumers facing difficulties paying their utility bills. Also, Enel is a large domestic company in Italy and hence negatively affected by the increasing spread between Italian and German interest rates. Just Eat Takeaway.com NV: The online food delivery company has complicated its strategic direction by acquiring Grubhub in the US. At the same time the valuation of growth companies with low profitability is being pressured by expectations for higher real interest rates. Alstom: The French manufacturer of railway equipment is trying to execute on a complicated acquisition, however with setbacks as the acquired order book was not as financially solid as expected. We now expect that this complicated integration process will be lasting longer. Koninklijke Philips: We have fully disposed of our position in the Dutch manufacturer of medical equipment as the investigation by the US authorities into the sleep apnea business carries on for longer than we previously expected with potentially larger risks related to the size of the potential fine and general management distraction related to the incidents. AVEVA Group: We have divested our position in Aveva, as we believe that the earning visibility remains low as the company goes through a cloud transition. Even though valuation remains low, we believe that it will be difficult for the shares to perform before we get more clarity. We still have an indirect ownership in Aveva through our position in Schneider Electric, which holds a majority stake in the company and fully consolidates its accounts. Antofagasta: Our position in the copper mining company was sold as we believe that the near term fundamentals are likely not supportive for the price of copper due to potentially rising near term supply and a deteriorating Chinese economy. Long term i.e. by the latter part of the decade we believe that the copper price will be supported by the environmental transition where use of copper is necessary. Nordea Bank: We have divested our position in Nordea Bank, as we reduced our overall exposure to European banks and portfolio beta. The transaction was also funding for our new position in Roche, where we see a better expectation gap. Portfolio Metrics: We had an active risk of 3.47% and a beta of 1.07 at the end of December 2022. The fund had an overweight in Financials (+4.07%) and Industrials (+3.40 %) relative to the benchmark at the end of the month. On the contrary, the fund had an underweight in Energy (-6.62%) and Consumer Staples (-3.15%). We are cautiously optimistic about the outlook for European equities going into 2023 despite a challenging macro backdrop. The war in Ukraine is increasing the global geopolitical risk and the conflict over gas supply between Europe and Russia is a key driver of risk sentiment in the financial markets. However, gas availability in Europe is good due to favourable weather, new LNG terminals and increased import away from Russia. We also see gas consumption being reduced by both consumers and companies without large slowdowns in industrial production and overall consumer spending is holding up. We therefore do not believe that energy rationalisation is a key risk for the European economy at this point in time. We do however believe that the current energy crisis will lead to a decade of strong build out of renewables, smart grid and transmission cables in Europe in order to reduce the dependency on external energy. This is a mega trend which we are well positioned towards as ESG investors and where European companies have strong capabilities in developing solutions. The market currently believes that we are heading towards a recession with central banks tightening monetary policy to tame inflation. While we expect an economic slowdown in Europe and that we could even have a recession by technical definitions, our estimation is that currently too much negativity is priced into the stock market, which explains our positive market view. The unemployment rate is still low and we have seen a reduction in gas- and electricity prices in recent months supporting a slower than previous expected fall in consumer spending. At the same time banks are well capitalised with good buffers, meaning that the risk of a financial and balance sheet crisis seems very limited at this point in time. We believe that these factors support our view that the downturn will be smaller than currently discounted by the market – though a soft landing scenario has been starting to become priced in by the market towards the end of 2022. We currently have a fairly balanced portfolio between different factors, e.g. value, growth, defensive and cyclical exposures, but with a small tilt towards cyclical value.

## **Investment Manager's Report (continued)**

### **European STARS Equity FAM Fund (the "Sub-Fund") (continued)**

We have also positioned the portfolio to benefit from the above mentioned mega trend of build out of energy infrastructure. That being said, our main focus remains on stock selection which is at the core of our investment process and the largest contributor to our portfolio risk and past returns.

**Nordea Investment Management AB**  
**March 2023**

# **FAM Series UCITS ICAV**

## **Investment Manager’s Report (continued)**

### **Global Sustain Paris Aligned FAM Fund (the “Sub-Fund”)**

In 2022, relative performance suffered materially as a result of the fund’s lack of exposure to the energy sector, which was the top performer in the benchmark index. Stockpicking in the industrials and materials sectors was also negative. On the positive side, the fund’s underweight to consumer discretionary companies helped relative returns, as did stockpicking in the healthcare and technology sectors. In what was a difficult year for the technology sector, the fund’s largest individual detractors were US technology giants Alphabet and Microsoft. Meanwhile, the top contributing stock was Novo Nordisk. The Danish pharmaceutical company’s share price rose strongly in the fourth quarter of the year, with investors responding positively to the company’s financial results. The fund made a number of new purchases in the year. These were investment data business Morningstar, efficient mining equipment manufacturer Weir Group, online marketplace eBay and software specialist Adobe. Furthermore, we sold our holdings in M&T Bank and Electronic Arts.

## Investment Manager's Report (continued)

### North American STARS Equity FAM Fund (the "Sub-Fund")

2022 turned out to be a very challenging year for most asset classes. The 30-year US Treasuries, down -33% had its worst year on record. The Russell 3000 Index fell -19.6% in 2022 marking the worst year since 2008. But unlike 2008, market breadth was unusually healthy with 58% of stocks beating the index, and with the equal-weighted S&P 500 outperforming the cap-weighted index by 6 ppt. In December the index fell by a full -5.9%. In terms of sector performance Energy was the only sector that gained in 2022 (+59%), beating the S&P 500 by 78 ppt, the biggest outperformance by a sector in history since 1970. Defensive sectors (Utilities -1%, Staples -3%, Health Care -4%) also outperformed. The positives for long term investors today is that many sentiment readings are negative, valuations have come down and interest rates are in restrictive territory making equities more attractively priced. This is a very different backdrop from the start of 2022 when interest rates were stuck at zero and stock market valuations were elevated. We still think that we need to be patient for a while in terms of taking on too much risk in the portfolio as earnings risk remains high for cyclical companies, but in general we do think that valuation multiples could start to expand in the event of an "earnings recession" as investors are forward looking. The Russell 3000 Index trades at a 12m forward P/E multiple of 16.8x today which is basically in line with the average level since 1995 and thus somewhat supportive. What the accumulated level of central bank tightening will do to the economy will most likely be seen and felt throughout 2023 and once this is clearer it will probably imply large moves between different sectors. As inflation levels come down and monetary tightening bites there is a cushion in terms of valuations and as long as nominal growth is high the market can be relatively resilient. Fund Performance: The outperformance was driven by positive attribution from stock selection, but dragged down by negative sector allocation. The best stock picks were in Information Technology (+153 bps) and Health Care (+148 bps) whereas adverse stock picks in Industrials (-56 bps) and Materials (-56 bps) detracted the most from overall stock selection. In terms of sector allocation, the strategy primarily benefitted from Consumer Discretionary (+44 bps) as well as Communication Services (+34 bps) in which the strategy is underweight in both. On the other hand, it was dragged down the most by the underweight in Energy (-220 bps) and overweight in Information Technology (-23 bps) sectors.

#### Top 3 Stock Performers:

1. Merck & Co Inc Merck performed well as good clinical results from a cardiovascular drug in phase 3 were reported, in combination with a report that beat estimates on the back of strong results from their key drivers Keytruda and Gardasil. Moreover the shares continued to perform well during the last part of the year as it is a defensive company.
2. AbbVie Inc performed strongly for the whole year due to its defensive profile. During the month of September, pharmaceutical stocks increased a lot in value as investors digested the news from the drug pricing bill that passed congress in August and reversed some of the drawdown seen in the month before.
3. Chubb Ltd was a top performer following results which saw the company deliver a beat driven by higher investment income and stable underwriting margins despite impact from Hurricane Ian. Looking forward, management guided for a continued hard market with rate increases exceeding loss cost which supports further growth and margin expansion which was received positively by the market. The share price continued to perform well for most part of the year due to the favorable market conditions.

#### Bottom 3 Stock Performers:

1. Alphabet Inc share price weakness continued into year-end as many investors are selling out of "Big Tech" names. Moreover the digital ad business is cyclical and there is a high level of uncertainty in the market how much this will impact Alphabet earnings in the coming quarters.
2. Amazon.com Inc underperformed after disappointing results end of October where AWS decelerated more than expected and commentary from management on an expected slowdown in e-commerce both in the US and Europe. The company has continued to sell off along with the rest of "Big Tech" as investors have been rotating out of these shares in general.
3. PayPal Holdings Inc has been trading weekly as it has been a challenging year with elevated comps post pandemic for e-commerce players in general. We are of the view that the set up turns more favorable in 2023 and that the company can also defend margins which should boost earnings growth.

## Investment Manager's Report (continued)

### North American STARS Equity FAM Fund (the "Sub-Fund") (continued)

**Buys:** Take-Two Interactive Software (Moat & Tailwind) We bought into TTWO in October as the shares have sold off sharply and we saw a great entry point into a long term winner. The share price has fallen around -50% from highs and the 12m forward P/E is currently 17x vs previous highs of around 35x. We see long term tailwinds ahead in the video game publisher that was founded in 1993. Take-Two owns some of the most valuable IPs in the entertainment industry Grand Theft Auto (GTA) and NBA 2k for example. Mondelez International (Moat & Tailwind) Mondelez is a resilient company within Consumer Staples thanks to its stable category in snacks and we are of the view that organic growth as well as margins can continue to surprise on the upside why we chose to add back to the company in November. We bought into Adobe (Expectation Gap) in July. The company that most people probably know from the "Acrobat pdf" or photoshop brands offers a line of applications of software products with a focus on content creation and information management. Adobe is one of the world's largest and most diversified software companies and recurring revenue streams are significant. We saw good risk-reward in Adobe in July as the stock had fallen around 50% and with some cyclical weakness more than priced in, and furthermore we see the company being able to grow 10-15% for many years to come. On the valuation side we bought into Adobe at circa 25x EPS vs the most recent peak of 50x EPS and thus we think that the company can compound well from these levels. NextEra Energy (Moat & Tailwind) provides sustainable energy generation and distribution services and generates electricity from wind, solar and natural gas. We bought NextEra Energy in July as we are of the opinion that short term supply issues have caused a dent in the company's long term attractive solar energy business, which gave us an opportunity to enter into a position of the shares. Also NextEra has the highest quality utilities business in the US (Florida Power and Light). Becton Dickinson (Expectation Gap): We initiated a new position in Becton Dickinson in April. BDX is a high quality company that was founded in 1897 and has done the same thing since then; consumables for the healthcare sector. Today it produces over 45bn devices annually and owns >29,000 patents. R&D and M&A have diversified the business but the high-volume consumables are still the core. For us the set up to enter into a position in the stock was optimal after 2 large acquisitions, FDA recalls and 5 years of underperformance. With this behind, we think that the outlook is now bright again. Align Technology (Expectation Gap): Align was founded in 1997. It is the pioneer in clear aligners for dental malocclusions (misalignments) and launched its first commercial product Invisalign in 1999. Today, Align is one of the largest pure-play dental companies in the world, with almost 4 bn in sales, purely from clear aligners and adjacent products and services. Clear aligners category can grow >20% per year with Align being a strong leader of the field. Given the favourable tailwinds, Align can double its sales in 4-5 years and given the recent sell-off in Align shares of more than 50%, the valuation was deemed very attractive to us at ~20x 2024 earnings and almost 5% FCF yield why we entered into a position in May. NVIDIA (Expectation Gap) We initiated a new position in Nvidia which is a semiconductor company that designs, develops and markets 3D GPU and software. The company started in gaming but has now a big part of its business in datacentres and grows fast in automotive, software and other industries as well. We see Nvidia as a modern "Picks and Shovel" company that enjoys several tailwinds for the coming decades and as the stock had sold off more than -50% from its highs we finally saw an opportunity to start buying into the story. Valuation came down to around 24x EBITDA from a peak of 56x which created an entry point for us as we still see the company being able to grow 20% or more for the long term. Allstate (Expectation Gap) is one of the leading property-liability insurers in USA and primarily engages in selling passenger automobile and homeowners insurance. We bought into Allstate in March as we are now closing in on the positive effects from the ongoing rate increase cycle which we believe could serve as a multiyear positive tailwind. Moreover we see that the reduction in expenses will improve the competitive position while last year's divestiture of the life business will lead to a higher longer-term ROE profile and thus would help Allstate to re-rate from the current very attractive level of around 13x 12m forward P/E. Check Point Software Technologies (Moat & Tailwind) was added back to the portfolio in February as we now see an accelerating top line development ahead. The company is a leader in network security and the model is to sell its core firewall product and bundle it with maintenance agreements. Marvell Technology Inc. (Expectation Gap) We bought a position in the company during January as the stock sold off sharply and we are of the opinion that this is a good Growth semiconductor company. Marvel is a fabless semiconductor company, manufacturing is outsourced to TSMC. An interesting aspect of the business model is also that customers fund R&D which enables MRVL to scale without taking too much risk. Our view is that if Marvel can sustain low to mid-teens revenue and margin expansion leading to 20% earnings growth, the stock trades at a 5-6 turn discount to structural Growth semis like NVDA and this gap could close, leading to a re-rating driving performance. **Sells:** Alibaba Group Holding ADR (Moat & Tailwind) This has been a case where conviction has gradually been lowered and as many other names that we prefer have sold off recently we have now divested the last part of Alibaba. Citigroup (Expectation Gap) We sold completely out of Citigroup as we have been trimming down our bank holdings gradually as lending standards are tightening and we have consolidated our banks portfolio towards core and higher quality holdings. In order to finance the Adobe transaction we sold completely out of our Salesforce (Moat & Tailwind) holding. We saw a good opportunity to buy Adobe instead in order to increase the quality of our software holdings even further.

# FAM Series UCITS ICAV

## Investment Manager's Report (continued)

### North American STARS Equity FAM Fund (the "Sub-Fund") (continued)

Salesforce is also a fantastic company that we continue to follow but we have recently struggled to get full conviction in the underlying organic growth rate as well as the margin trajectory of the company why we chose to switch into Adobe instead. Medtronic (Moat & Tailwind): We sold off our final position in Medtronic as we have higher conviction in other health care stocks. Neurocrine Biosciences (Moat & Tailwind): We sold off our final position in Neurocrine as we have higher conviction in other health care stocks. Cisco Systems (Expectation Gap): We sold off our remaining position in Cisco as the company is one of our more cyclical tech stocks and we saw near term expectations being somewhat elevated. Cisco is normally a value stock that we tend to revisit once the most early cyclical slowdown is behind us. Avantor (Expectation Gap) was sold during the month as we see better opportunities elsewhere within the Health Care segment. Portfolio Metrics: We had an active risk of 4.01% and a beta of 0.90 at the end of December 2022. The fund had an overweight in Information Technology (+2.88%) and Consumer Staples (+1.97%) relative to the benchmark at the end of the month. On the contrary, the fund had an underweight in Energy (-5.28%) and Consumer Discretionary (-3.88%). Market Outlook: We are bottom up investors and as such we aim to make most of the alpha from our stock picking efforts. We need to emphasize that just because we enter a new calendar year, the market outlook does not change by default and even if new eyes and perspectives are healthy we do think that several trends from 2022 are extending into 2023. Even if we are of the view that inflation rates are going to fall throughout 2023 the interest rates remain high and many central banks' balance sheets are contracting which still serves as a headwind for equity prices in general. Continued monetary tightening implies that there could be higher than normal volatility in many asset classes in the near term. The main problem is that inflation rates remain too high and if they persistently stay high they will eventually undermine the long term economic potential, why central banks are still in restrictive territory. For now the hawkishness remains high as many officials aim to keep rates at a high level until demand slows and unfortunately unemployment starts to rise. We remain of the view that it is important to hold a relatively balanced portfolio of higher quality securities in this market environment as this has historically proven to be rewarded. We are currently in a situation where the long end of the yield curve is falling but the short term rates are above long term rates which historically has indicated economic weakness ahead. In this environment with decelerating inflation (from high levels) companies that tend to do the best are in sectors such as consumer staples, software, medical equipment, pharma etc whereas companies that tend to do worse usually are found in machinery, real-estate, consumer durables, mining and oil and gas. On a longer term horizon our view is that we will be able to find winners in both long duration as well as short duration securities but with that said there is a heightened need for significant "green" capex and efficiency investments to drive productivity which implies that the next 10 years will probably give market participants bigger opportunities in "old economy" stocks vs the last 10 years which was all about "new economy" stocks, long duration and enjoying ever falling long bond yields. We are also in a situation with virtually full employment which will force many companies to share more of the profits to employees and to invest in efficiency enhancing technologies in order to defend the current all-time high margins. In this environment it is of significant importance to be invested in companies which exhibit solid pricing power and strong moats to sustain above index level performance.

## Investment Manager's Report (continued)

### Global STARS Equity FAM Fund (the "Sub-Fund")

It is often said that investment bubbles are obvious in hindsight, but difficult to detect in real time. I am not sure that it is true. In this letter we have been warning about bubbles in many assets for some time, and 2022 was the year that the last few obvious ones burst. Bubble prone assets must be difficult to value or bubbles would not exist. Or preferably they should even be impossible to value, like Bitcoin which obviously lacks any intrinsic value. High growth stocks are another example, as it is very hard to tell how long growth will persist and how it should be valued. But eventually these stocks tend to become "invaluable, but (obviously) overvalued" and at that time the fun tends to stop. Consequently, unprofitable tech stocks (as measured by Goldman Sachs' index) have fallen more than -75% from their peak, albeit most of that decline happened in 2021. Bitcoin too is off some -75% and most recently Tesla had fallen by -74% from its peak. Nvidia fell by about -2/3 from peak to trough in the fourth quarter last year. But we were not alone in recognizing this bubble. Our clients have been very patient though this volatile period, recognizing the challenges which these valuation bubbles have posed to active portfolio managers. For example, we have received no angry comments from clients for "missing" Tesla when the stock rose sharply in 2022 and 2021. On the contrary, when we have mentioned Tesla as a detractor for the fund, most of our clients have frowned and commented that not owning Tesla was probably the right call to make. We are very grateful for that, and we feel that in 2022 we were vindicated together. Looking forward though, it is probably fair to say that most of the hot air has come out of the previous bubbles. And we have started acting on this. When Nvidia had fallen from USD 346 to USD 115 we covered the last of our underweight in that stock. We are now looking for the right opportunity to go overweight as we believe that the company remains very well positioned and has both wide moats around the business and tailwinds for years to come. Tesla is a similar, but somewhat different story. The stock has fallen a lot, the company is doing some extraordinary things and valuation is starting to look more reasonable. However, we are not convinced by the ESG profile. While the company deserves enormous credit for singlehandedly changing the auto industry and diving electrification and battery technology, we are not convinced around some of the labour practices. I have myself visited Tesla's factory in Fremont, California, and while it was an impressive display of entrepreneurship and innovation, the factory layout was chaotic and did not come across as a modern workplace in terms of safety. The story is evolving however, and I am sure that we will come back to Tesla at some point. In terms of performance, 2022 was not much to look back upon. The fund followed the market lower and the relative outperformance was limited to +2.24% gross of fees. However, while this is below our target, we are relatively happy with this outcome after all. Our underweight in Energy, as discussed previously in these letters, cost us around -180 bps of performance YTD, adjusting for which we would have met our target this year. And according to Bank of America/Merrill Lynch, some 80% of ESG funds underperformed their benchmarks in 2022, which Global STARS did not. Adding the volatile nature of markets in 2022, driven by more or less unexpected events like the war in Ukraine and new Covid lockdowns in China, we had to navigate through some significant headwinds in 2022. I am very grateful for the hard work put in by the team in 2022 to reach these results despite all the challenges. And we remain grateful and humble to our all clients for your trust and patience. We look forward to working to achieve even better results in 2023. Fund Performance in 2022: The outperformance was due to positive attribution from stock selection and but was negatively influenced by sector allocation. The strategy benefitted from good stock picks in Consumer Discretionary (+149 bps) and Information Technology (+123 bps) but was dragged down by unfavourable stock picks in Industrials (-55 bps) and Materials (-35 bps). In terms of sector allocation, the strategy was rewarded by the overweight in Health Care (+35 bps) and underweight in Communication Services (+20 bps), and was negatively affected by being underweight Energy (-178 bps) and Utilities (-16 bps).

### Top 3 contributors:

1. Merck & Co Inc (Expectation Gap) performed particularly well as good clinical results from a cardiovascular drug in phase 3 were reported, in combination with a report that beat estimates on the back of strong results from their key drivers Keytruda and Gardasil. Moreover the shares continued to perform well during the last part of the year as it is a defensive company.
2. AbbVie Inc (Expectation Gap) performed strongly for the whole year due to its defensive profile. During the month of September, pharmaceutical stocks increased a lot in value as investors digested the news from the drug pricing bill that passed congress in August and reversed some of the drawdown seen in the month before.
3. Pan Pacific International Holdings Corp (Expectation Gap) is a Japanese discount retailer with a relatively dynamic and innovative business model.

# FAM Series UCITS ICAV

## Investment Manager's Report (continued)

### Global STARS Equity FAM Fund (the "Sub-Fund") (continued)

The stock performed very well in 2022 due to (1) a rebound post Covid and (2) defensive characteristics as the market got increasingly nervous towards consumer sentiment.

#### Bottom 3 contributors:

1. Sberbank of Russia PJSC (Expectation Gap): We held a small position in Sberbank going into 2022 as the stock was very cheap and we considered it a hedge against rising oil prices. Unfortunately the hedge did not work as the stock was written down to zero as Russia invaded Ukraine and sanctions were imposed on Russian stocks.
2. Koninklijke Philips NV (Expectation Gap): We bought Philips as a turnaround case post a product recall in its Respironics business in the US. However, the product's safety issues dragged out longer than we expected and performance was further impacted by supply chain issues in 2022. 3. Alphabet Inc (Expectation Gap): Share price weakness continued into year-end as many investors are selling out of "Big Tech" names. Moreover the digital ad business is cyclical and there is a high level of uncertainty in the market how much this will impact Alphabet earnings in the coming quarters. The stock came into 2022 on the back of a very strong 2021. Buys: Shimano (Moat & Tailwind) has historically been one of the best performing companies in Japan. As a supplier of bicycle and electric bicycle components we think that Shimano enjoys a structural tailwind in demand, which is expected to remain for the foreseeable future. We took advantage of a decline in the share price driven by Covid backlash and general concerns about discretionary spending among consumers to take a position in this quality stock. Roche Holding (Expectation Gap) replaces Sanofi in the portfolio. We believe that the shares are de-risked after a large immune oncology study failed earlier this year. Core Roche is a solid business with proven track record in commercial execution as well as research and development. We see it now as a defensive stock at a relatively attractive price. Nestle (Moat & Tailwind) is a high quality defensive stock, which has lagged a bit recently, giving us the opportunity to add it to the portfolio. Align Technology (Expectation Gap) is a MedTech company specialising in and pioneering clear liner bracelets. The stock had fallen from USD 700 to 200 in the general rotation out of growth stocks in the past year. We took a very small position in October. HSBC Holdings (Expectation Gap) was bought to gain exposure to rapidly rising net interest income in October. Estee Lauder Cos (Moat & Tailwind) replaces LVMH in the portfolio. While still expensive the shares had fallen sharply year to date, with P/E ratio contracting from 45x to 30x. Hence, we thought it was a relatively good opportunity for the company to re-enter the portfolio after a period of absence due to high valuation. Shares of Zur Rose Group (Expectation Gap), the Swiss online pharmacy, fell 80% in a year as German regulations on online drug sales have taken longer to materialise than expected. We took the opportunity to buy a small position. High risk and low liquidity mean that the position will remain very small for us. With Becton Dickinson and Co (Moat & Tailwind) we identified another defensive growth stock in health care equipment and consumables at a reasonable valuation to replace Medtronic. Should benefit post Covid as patient volumes should recover at hospitals. We entered into a position of shares of Sanofi (Expectation Gap), which exhibit defensive characteristics and are underpinned by margin expansion and low valuation. Shares of Teleperformance (Expectation Gap) (defensive growth) have barely kept up during the bull market, and should be well placed to outperform in a slowing economy as the company benefits from outsourcing trends. Metso Outotec (Moat & Tailwind) has long suffered from the capex slump in the mining industry over the past decade. We already hold Epiroc as we believe that this megacycle may be near its trough and could reverse over coming years. When the stock fell 30% due to its 10% exposure to Russia, we took the opportunity to add the stock to the portfolio. Adobe (Expectation Gap) is a very high quality software business with solid moats and strong tailwind from digital content creation. The stock almost halved from USD 700 in November to 375 in May, significantly derating its multiple. This gave us the opportunity to enter into the stock thus further improving the quality of our software portfolio. We have started to build a position in Amadeus IT Group (Moat & Tailwind) the global leader in travel IT. We expect the company to benefit from a recovery in travel as the Covid-19 pandemic ends. Pent up demand for travelling could be significant. NVIDIA (Expectation Gap) is a company that we have liked for a long time, we first invested in the stock in 2016. However, we made the mistake of selling it too early, which we have regretted. Similarly to Adobe, the Nvidia stock halved between November and May and we took that opportunity to close part of our underweight. We still find it expensive and hope to close the remaining underweight and go overweight at a later and lower valuation. Norsk Hydro (Moat & Tailwind) is a "winner" from energy shortage and that shortage was made worse by the Russia-Ukraine war. Energy shortage means less aluminium production, and higher aluminium prices, which benefits Norsk Hydro thanks to its stable electricity supply. Short term supply issues have caused a dent in NextEra Energy's (Moat & Tailwind) long term attractive solar energy business, which gave us an opportunity to enter into a position of the shares. Also, it has the highest quality utilities business in the US (Florida Power and Light).

# FAM Series UCITS ICAV

## Investment Manager's Report (continued)

### Global STARS Equity FAM Fund (the "Sub-Fund") (continued)

Sells: US Foods Holding (Expectation Gap) was held as a post Covid re-opening beneficiary, which is now behind us and we sold out the last part of the position in October. Lloyds Banking Group (Expectation Gap) was sold to finance HSBC. PayPal Holdings (Moat & Tailwind) was sold as we lost conviction in the company being able to quickly turn the business around. The core business looks vulnerable to new competition. HSBC Holdings (Expectation Gap) The fundamental story remains in place and we still think that HSBC is an attractive asset. However, the corporate governance and China exposure turned out more complicated than we had anticipated and added to the China exposure in the portfolio beyond what we found desirable at this moment, which lead us to close the position in November. Zur Rose Group (Expectation Gap) was held in a very small position where we lost conviction after some regulatory setbacks. Sanofi (Expectation Gap) is a cheap defensive with self-potential to boost margins. However, as mentioned above litigation risk related to the company's OTC anti acid drug Zantac surfaced this month, introducing risk we are not comfortable with. Hence, we divested our position and reinvested proceeds in Roche. Chubb (Moat & Tailwind) shares have been in the portfolio for some time. The US P&C insurance company has benefitted from a cyclically hard market for some time now and the shares have done well as a result. Looking ahead, we would rather bet on a recovery in auto insurance and we thus focus our US P&C holdings to Allstate and Progressive. Neurocrine Biosciences (Expectation Gap) was an Expectations Gap case where the growth story was derailed by the Covid pandemic. The shares did well this year as the business recovered post Covid and we took the opportunity to exit the position. We also find that the underlying case has changed from commercial execution to delivering on its pipeline, for which we do not have any conviction at this point. Metso Outotec Oyj (Moat & Tailwind) was held in a small position, where cyclical headwinds prevented us from building a meaningful position. For now we see better use of capital elsewhere. Norsk Hydro (Moat & Tailwind) was held in a very small position. The company benefits relative to peers from high energy prices, however, the cyclical outlook does not support valuation we think. We will revisit the case at a later point. LVMH Moet Hennessy Louis Vuitton (Moat & Tailwind) was sold due to a sharpening of the Nordea STARS alcohol policy. We have owned LVMH because we think that it is an excellent operator in the luxury goods space. However, our new policy does not allow greater than 5% revenue exposure to alcohol, which disqualifies LVMH from the portfolio. Pool Corp (Moat & Tailwind) is an excellent company with very strong market positions. However it has benefitted hugely from the buoyant US housing cycle and stay at home trend during the pandemic. Due to a relatively generous valuation and riskier outlook we decided to put the stock on pause, despite solid current trends. Due to the extremely difficult situation in Ukraine and the geopolitical uncertainty we offloaded all the shares of Sberbank of Russia PJSC (Expectation Gap). The long standing Moat and Tailwind holding Medtronic proved to be of lower quality than we had expected. After several shortfalls compared to management's guidance we decided to replace it with Becton Dickinson in the portfolio. Avantor was an Expectations Gap case for us as a winner from the Covid pandemic. Tailwinds are now abating and we closed the position. Shares of United Rentals (Expectation Gap) have been among the most cyclical in our portfolio. While we still like the long term story, we think that the share price has run away somewhat and might be in for a correction. Shares of Rexel (Expectation Gap) were too cheap when we bought them. The shares have now rerated and as a consequence we closed our position. We exited SKF (Expectation Gap), despite its value characteristics as we thought that the cyclical risks were too high. SK Hynix (Moat & Tailwind) represents an extremely cyclical stock, and DRAM market is unusually opaque going into 2022. However, after a couple of quarters of rising DRAM prices and the SK Hynix stock having outperformed the broader semiconductor sector since October last year, we decided to exit our small position as we think that risk/reward is not attractive here. Twilio Inc (Moat & Tailwind) & Atlassian Corp PLC (Moat & Tailwind) were our two most expensive software stocks and were small positions in the portfolio, due to the elevated valuation risk. Still we lack the conviction in long term growth to defend these valuations in an environment of rising interest rates that we expect over coming quarters. These are still good companies and we will revisit them at a later stage. We entered into Check Point Software Technologies (Moat & Tailwind) only a few months ago for its defensive qualities, sharp valuation discount to other software stocks and apparent green shots in order intake. Since then valuation discount has been significantly reduced as many other software stocks have fallen. In addition the latest report was disappointing as the growth momentum was not maintained and costs continued to rise faster than topline. We therefore decided to switch into Adobe instead. Autodesk (Moat & Tailwind) represents a similar business model and stock to Adobe. However it was a small position for us due to valuation, lack of conviction in long term growth runway and some less than clear communication from the new management team. We sold out of the position to make room for Adobe. Positioning & Portfolio Metrics: At the end of December 2022 our active risk (tracking error) was 3.48%, our beta was 0.93 and our cash position 0.08%. Our largest sector overweight were Health Care (+3.35%) and Consumer Staples (+2.86%), while we were underweight Energy (-5.58%) and Consumer Discretionary (-2.47%).

## Investment Manager's Report (continued)

### Global Disruptive Opportunities FAM Fund (the "Sub-Fund")

Overall, positioning of the fund have not change, we continue to hold a defensive bias, we tend to increase exposure to names that we have the strongest convictions and underperformed year over the last 12 months. They offer the best risk-return in this market environment, mainly in the Cloud, Big data, life sciences tool and Renewables themes. Fund valuation versus the market is historically low combine with strong catalysts for the next months to come. "For the 2nd part of the year, market is going to transition from concerns exclusively on rates and valuations to more of debate and concern on growth slowdown and recession. A positive environment for secular grower.

The strategy in the fund has been to increasing exposure to Enterprise Tech: cloud, big data, cybersecurity as digital transformation remains a clear imperative to stay competitive and drive efficiencies. Names we are expose to continue to demonstrate strong execution, product excellence and strong cash flow generation. Within this segment, we don't have the "unknown" that lies ahead, with durable and recurring revenue."

The MSCI World posted a flat performance in the 3rd quarter closing two consecutive quarter in the red. Performance of the fund continue to be driven by hawkish central bank policy, that translated into another tough months for the equity market. NASDAQ is down over 18% from mid-August until the end of September, one of the worst stretches in the last decade.

Over the quarter, the fund underperform the MSCI World. Digital Economy was the main driver of this underperformance, with 3 themes: Fintech, Big Data, and ecommerce.

TransUnion is the main detractor the FinTech theme performance, results missed expectations for revenue growth in the quarter and the guidance for the year was cut.

In the Big data theme, the underperformance is driven by weakness on the semiconductors sectors, as data points continue to soften, supporting the bear case that weakness may eventually broaden out beyond PCs/Smartphone. Marvell Technology guided a revenue deceleration quarter on quarter, which push the debate on the data center, hyperscale end-market deceleration.

In the eCommerce theme, Segro, a UK real Estate that manage and develop modern warehouse, was down more than 25%, following the recent weakness in Sterling and risking risk premium across UK asset.

Finally, the performance of the Cybersecurity theme is mixed, Palo Alto Networks continue to outperform but we were penalized by Okta, leader in the identity management service was down by more than 30% after mixed 2Q result. The company lowered billings with key a key questions marks on underwhelmed RPO and sales issues, due largely to sales integration challenges associated with core Okta and Auth0; acquisition made last year.

The Healthcare dimensions contributed also negatively, with Wuxi Biologics in the Biotech themes. The Chinese healthcare company was lower on the US Executive order for a specific funding budget with over 2 B US to advance the biotech/biomanufacturing initiative to lower prices, create jobs and strengthen supply chains. The executive order has no material impact on the business operation but the geopolitical risk remain an overhang on the performance for the name.

We also have some profit taking in the eHealth theme, with Veeva Software and IQVIA after a strong earnings and performance in July.

The Industry 4.0 and Earth dimension had a neutral contribution to the performance.

Earth dimension benefited from the new reconciliation bill announced by Senator Joe Manchin and Chuck Schumer called the "Inflation Reduction Act of 2022", the bill largely preserves prior clean energy proposals and extend solar ITC for 10 years at 30%. We also had an underperformance in the energy storage theme of CATL in the energy storage theme, on weak sell through of EV cars in China.

In the Industry 4.0, the Schneider Electric in the Smart factoring theme also had a positive performance contribution, following a good earnings release.

## Investment Manager's Report (continued)

### Global Disruptive Opportunities FAM Fund (the "Sub-Fund") (continued)

2022 was a year of macro and geopolitical shocks with sharply higher global rates and USD, stubbornly high inflation, China headwinds, and the largest conflict in Europe since WWII.

Investors responded to these events by a sharp de-rating of the growth segment. Over the last 12 months, NASDAQ 100 went from 28x P/E to 21x P/E.

For 2023, fundamentals will likely to deteriorate as financial condition continue to tighten and monetary policy turn more restrictive. In this new environment: "higher rate for longer"

Where to find growth? Early 2023, we had a rare combination of easier year and year growth comparison and major multiple compression creating compelling opportunities. Through the year, we expect that cost cutting drives margin expansion, falling inflation combined with slow economic growth drives back positioning into secular growth that is cash-rich balance sheets.

For the first time in 20 years, everyone is bearish and expecting 2023 to be difficult and volatile. Everyone has a lot of defensive positioning already, and cautious on growth and innovation, the first time in a decade. We think of 2023 as the Tale of Two Halves.

In the fund, we want to find the right balance between growth positioning and strong fundamentals.

Outlook is set favorable in some specific segment of the semiconductors sector like the compound semiconductors for efficient high-voltage power conversion and transmission, key for clean energy adoption in multiple industries, including mobility, factory automation, and robotics. We expect the ongoing inflection in electric vehicle adoption alone to drive meaningful power semiconductor growth for at least the next decade.

Digitalization of the economy continue to be a main driver of growth and disruptive forces in the economy. We continue to expect a solid demand outlook, because ongoing need for digitalization: through Cloud, Big Data and Cybersecurity. Security, remain important given the elevated number of breaches, regardless of the macro environment, budget are viewed as more resilient.

Payments theme is more and more interesting as the theme is already pricing in a recession to a significant degree.

In the Earth dimension, we view 2022 as a game-changer owing to the global energy crisis and stronger than expected policy support, globally. We believe the industry is entering a catalyst-rich environment as companies announce new manufacturing to benefit from the US IRA, and look for order activity to accelerate, providing revenue visibility into 2024 and beyond. We believe 2023 sets up favorably for our Earth dimension, we expect another year of record renewable deployment globally driven by energy security concerned and power prices.

In the Healthcare dimension, biopharma companies broke new ground in previously untreated diseases, advanced new-targeted cancer agents into the clinic, and continued to show the potential of novel modalities. Simultaneously, diagnostic, artificial intelligence, and synthetic biology tools continue to change the face of how and when therapies are used, discovered, and manufactured. For 2023 will see an acceleration of data, trial starts, and commercial milestones as companies, providers, and payers assess the potential of these breakthroughs and how best to use them.

## Investment Manager's Report (continued)

### Medtech FAM Fund (the "Sub-Fund")

The inflation theme is likely to remain central in the upcoming earnings season: the war in Ukraine, coupled with the spread of a new variant BA.2 that is leading China to institute new lockdowns, reminds everyone that while inflation will be temporary, it could still be painful for some sectors. The US healthcare equipment sector will be closely watched for supply chain tensions. The possibility of stable or even rising prices after a decade of systematically lowered prices by the authorities, however, could clearly act as a shock absorber and CMS' decisions will be studied very carefully.

The recession theme weighed heavily on global equity markets during the quarter, and the CPR Invest Medtech portfolio was no exception. However, it fell less than its benchmark index, dropping only 13.45% in gross terms, while the MSCI World Health Care Equipment & Supplies fell 15.64% in euro terms. This outperformance was due to the good performance of Diagnostics and Cardiology/Neurology, thanks in particular to our preference for Boston Scientific, which significantly outperformed the index over the past quarter, as well as the significant decline in Non-Invasive Devices, which fell by 18%, even though we are heavily underweighted in this segment of the medtech market. Indeed, we benefited from our low exposure to Align Technology, in the dental sector, which fell sharply after the market became alarmed at the impact of the contraction in demand due to the macroeconomic slowdown. By the end of the period, however, we saw greater resilience in the more expensive stocks in our universe, indicating that the adjustment to the new long-rate paradigm was likely largely complete. We therefore began to build or strengthen certain positions in growth stocks on a case-by-case basis, in order to take advantage of the sharp declines observed since the beginning of the year. Thus, we increased our exposure to Sartorius (diagnostics) and Dexcom (diabetes), considering that the declines since the beginning of the year were good entry points for quality stocks whose growth profile is totally non-cyclical.

The MSCI World Healthcare Equipment & Supplies fell by 1.58% in euro terms during the III quarter: Imaging/Radiation Therapy was the best performer with a decline of 8%, followed by Medical Devices and Non-Invasive Devices, while Orthopedics, followed by Dialysis/Blood Products and Diabetes both recorded positive performances. The portfolio recorded a positive relative performance over the quarter of about 50 bps. The allocation is costly over the quarter as we were penalized by the rise in orthopedics. On the other hand, the fund benefited from a good selection: within cardiology, we benefited from strong gains in Axonics (+32%), Silk Road (+31%), Si-Bone (+41%) and Boston Scientific Group, which rose by 10%. In hearing aids, we suffered a sharp decline in GN Store, penalized by a profit warning, but also by its high level of debt, considered a handicap in a context of rising interest rates.

During the fourth quarter, the portfolio was up 3%, down about 1.5% versus the MSCI Healthcare Equipment & Supplies. There was a negative allocation effect on the cardiology sector, as the sector was one of the worst performers during the quarter. Conversely, the performance in line with the Non-Invasive Devices index cost the portfolio since we are underweighted in this segment. In addition, stock picking in this segment did not perform well. Within diagnostics, we were also penalized by a negative selection effect. Conversely, our positioning in Surgery was positive during the quarter, thanks to our position in Intuitive Surgical, which rose by 29%, as well as our selection within the Blood/Diabetes sector, with Dexcom, which rose by 30%. Within Cardio/neurology, we benefited from a good entry point in Penumbra (+27%), the good performance of Inspire after solid results (+30%) as well as Boston Scientific. The lack of investment in Abiomed penalized the portfolio as J&J acquired the company at a 35% premium. Catalent was impacted by FDA warning letters and production problems at several of its facilities.

**March 2023**

# FAM Series UCITS ICAV

## Investment Manager's Report (continued)

### Sustainable Future Connectivity FAM Fund (the "Sub-Fund")

Global equities declined over the period. Markets came under pressure as tightening monetary policies by major central banks to curb elevated inflation intensified fears around global growth. Geopolitical risks arising from Russia's attack on Ukraine and the resurgence in COVID-19 cases in several regions further weighed on investor sentiment. Fears that a lengthy period of restrictive monetary policies could lead to slower economic growth and weaker labour market conditions dampened confidence. Against this global backdrop, Europe ex UK and US equities were the biggest decliners among key developed markets. From a sector perspective, consumer discretionary, information technology and communication services were among the key laggards. Meanwhile, energy companies rose as crude oil prices surged amid risks to global energy supplies arising from the Russia-Ukraine conflict. Performance Comment: During the period, the fund recorded negative returns. Stock selection in the semiconductors & semiconductor equipment industry detracted, as did the lack of exposure to energy and defensive health care names. Key detractors: In terms of key detractors, Swedish telecommunications company Ericsson declined after the company posted third quarter results below expectations and flagged an increase in restructuring costs to help meet their 2024 margin targets. Shares received some support later in the period after the company announced it had signed a patent renewal deal with Apple, ending ongoing legal disputes. The holding in semiconductors producer Marvell Technology also fell. Its shares dropped after the company reported lacklustre second quarter earnings and reduced its third quarter guidance, citing continued supply chain constraints. Shares in the Dutch holding company Prosus was among the top detractors. Prosus initially benefited from the news that it had terminated the agreement for one of its subsidiaries to acquire an online payments firm for what was seen as an inflated price, and they completed the exit from their Russian asset for a better than expected \$2.5bn sale value. However, shares were later impacted by the general weakness in Chinese technology stocks. Key contributors: The holding in telecommunications equipment provider Motorola Solutions surged as its second quarter results exceeded expectations, with earnings and revenues above consensus estimates. The lack of exposure to Tesla contributed to relative performance. Shares in the electric vehicle company declined through the year after it had to suspend production in China due to Zero Covid-19 lockdowns more recently a sharp spike in Covid-19 infections. Telecommunications major Deutsche Telekom was a notable contributor to relative returns. The company raised its annual earnings guidance for 2022, supported by accelerating customer additions in its US business and revenue growth in its European markets. Fund positioning: The strategy adopts a fundamental, bottom-up approach to investing in the long duration, transformative trend of future connectivity. This is defined as companies involved in enabling connectivity, and those that innovate and disrupt other industries using improved connectivity. It aims to invest in underappreciated growth opportunities in the theme, and combines a rigorous, bottom-up stock selection process with thematic and industry analysis to produce a relatively concentrated, high growth portfolio of 35-45 stocks. The fund has a very strong focus on sustainability - in particular, digital ethics issues - with  $\geq 70\%$  of stocks held having sustainable characteristics.

## Investment Manager's Report (continued)

### Changing Lifestyles FAM Fund (the "Sub-Fund")

Global equities saw steep declines in 2022. Despite relatively resilient earnings throughout much of the year, inflation, tightening monetary conditions and geopolitical tensions drove increased volatility across equity, bond and currency markets. Russia's invasion of Ukraine in late February caused a global shock, with equities declining and commodity prices soaring, given that Russia is a key producer of several important commodities. This contributed to a further surge in inflation as well as supply chain disruption. In effect this brought about an end to the loose monetary policy era across many developed markets as central banks moved to raise rates and halt asset purchase programmes synonymous with the previous decade. This dynamic kept shares prices under pressure through spring and summer of 2022 as investors moved to price in interest rate rises and an increased risk of recession. Shares did however make gains in November as improved sentiment drove a bear market rally but hawkish central bank rhetoric amidst a slowing growth backdrop ultimately led markets to further losses in December.

The fund underperformed its comparator over the period. On the debit side of the ledger, performance was impacted by the underperformance of holdings in Zalando, Amazon and Alibaba (all constituents of the Accessibility sub-theme). German online fashion retailer Zalando came under pressure as discretionary spending declined in some markets. We sold out of the position during the period on increasing concerns about an overly optimistic management team and the strength of the company's balance sheet in the current environment. Mega cap stock Amazon – a significant beneficiaries of Covid "lockdown life" – saw its core business suffer from a deterioration in macroeconomic conditions. In the case of Chinese internet platform Alibaba, the company reported its first decline in quarterly sales (Q2) since its 2014 New York listing. More generally, the e-commerce company suffered as a result of China's strict Covid-19 lockdowns, as the government pursued a hard line zeroCovid policy through much of the period. Performance did however benefit from our positions in AIA Group (a constituent of the Wellbeing sub-theme), Dollar General (Experiences) and Deckers (Wellbeing). In the case of Dollar General, the company offers very low prices with a very efficient cost model and benefitted in an environment of consumers trading down. AIA Group rose significantly in the latter part of the year on investor expectations that Hong Kong's access to the mainland China market would improve following the Chinese government's decision to relax its strict Covid-19 rules. Deckers, for its part, benefited from strong operating performance during the period driven primarily by continued growth in Deckers' running shoe brand, Hoka, and more generally from the secular shift towards casual and comfortable footwear.

Turning to the outlook, we remain excited by our powerful changing lifestyles investment theme. This strategy continues to access the long-term growth dynamics in evolving consumer behaviours but the shorter-term influences playing out for this strategy are highly influential. In this respect, inflation and the response of monetary policy to it are critical and we will be monitoring how these influences affect both the earnings estimates and the valuation of the stocks in which we are investing. As we look at the consumer discretionary parts of the market we are calibrating the effect of slowing economic growth and determining the extent to which this is discounted in prevailing share prices. Politics in its broadest sense is also an important consideration, whether geopolitics, domestic elections, tax and spending policies or other legislation. In the meantime, we continue looking across each of our four sub-themes, namely Accessibility, Experiences, Identity and Wellbeing, to identify compelling stock selection opportunities for the portfolio.

**Schroder Investment Management Limited**  
**March 2023**

# FAM Series UCITS ICAV

## Investment Manager's Report (continued)

### Morgan Stanley US Advantage FAM Fund (the "Sub-Fund")

Morgan Stanley US Advantage FAM Fund returned a total performance of -54.65% (net of fees) in 2022. Counterpoint Global seeks high quality companies, which we define primarily as those with sustainable competitive advantages. We manage concentrated portfolios that are highly differentiated from the benchmark, with securities weighted on our assessment of the quality of the company and our conviction. The value added or detracted in any period of time will typically result from stock selection, given our philosophy and process.

The long-term investment horizon and conviction weighted, highly active investment approach embraced by Counterpoint Global can result in periods of performance deviation from the benchmark and peers. The portfolio underperformed the S&P 500 Index this quarter primarily due to unfavourable stock selection; sector allocations also detracted to a lesser extent.

U.S. large-cap equities, as measured by the S&P 500 Index, advanced over the quarter. Energy, Industrials, Materials, and Financials posted the highest return in the S&P 500 Index. Most sectors advanced over the period; however, Consumer Discretionary and Communication Services posted negative returns and were the relative underperformers in the index. Against this backdrop, Counterpoint Global continued to focus on stock selection and the long-term outlook for companies owned in the portfolio.

Fear and uncertainty due to concerns about inflation, rising interest rates, geopolitical tensions, and ongoing effects of the global pandemic continued to weigh on market sentiment, contributing to greater volatility and a continued aversion towards high growth equities. We believe this rotation away from high growth equities remains driven primarily by non-fundamental factors. Fundamentals across portfolio holdings have largely remained healthy and in line with our expectations. Despite market volatility, we continue to find many high quality companies with attractive end-game potential due to compelling fundamentals, strong balance sheets, and multiple competitive advantages. We believe today's market offers an attractive opportunity to buy unique companies with strong fundamentals that can be long-term winners over the next three to five years. While we have opportunistically added to some positions and initiated new ones, overall we have made few changes as we remain confident in the long-term prospects for the businesses we own.

Information Technology was the top detractor in the portfolio in quarter one, due to mixed stock selection. The portfolio's stock selection in and sector allocations to most other sectors detracted as well; stock selection in Communication Services and Consumer Discretionary was most unfavourable to relative results. All sectors detracted over the period, with the exception of Real Estate, which had a negligible impact.

Information Technology was again the top detractor in the portfolio in quarter two, due to mixed stock selection. Most other sectors also detracted from relative performance over the quarter due to stock selection; among them, Industrials, Communication Services, and Consumer Discretionary had the greatest adverse impact. Lastly, Real Estate and Materials – sectors the portfolio has no exposure to – each had a negligible impact on relative performance this period.

In quarter three, Communication Services was the top contributing sector across the portfolio, as strong stock selection more than offset the unfavourable impact of an average sector overweight position. Industrials was the second greatest contributor in the portfolio, due to favourable stock selection. Stock selection in Information Technology also aided relative performance. Stock selection in Financials also contributed, as did a lack of exposure to Consumer Staples, Real Estate and Materials. To a lesser extent, Consumer Discretionary also aided relative results, as an average sector overweight position more than offset the adverse impact of mixed stock selection. Conversely, Energy and Health Care were the greatest detractors in the portfolio this quarter. The portfolio had no exposure to Energy, which was among the top performers in the index. Health Care detracted due to mixed stock selection and an average sector underweight position. Lastly, Utilities – a sector the portfolio has no exposure to – had an overall negligible impact on relative performance.

In quarter four, Communication Services was the largest relative detractor in the portfolio, due to unfavourable stock selection and an average sector overweight position. Information Technology and Health Care were also large detractors primarily due to mixed stock selection. Industrials also hurt relative performance as mixed stock selection more than offset the favourable impact of an average sector overweight position. To a lesser extent, an average underweight position in Financials and Materials also weighed on relative results, as did a lack of exposure to Energy and Consumer Staples. Consumer Discretionary was also a detractor in the portfolio, as an average overweight position more than offset favourable stock selection. Conversely, Real Estate was the top contributing sector in the portfolio this quarter, due to a lack of exposure to the sector. Lastly, Utilities – a sector the portfolio has no exposure to – had an overall negligible impact on relative performance.

## **DEPOSITARY'S REPORT TO THE SHAREHOLDERS OF FAM SERIES UCITS ICAV**

We, BNP Paribas S.A., Dublin Branch, appointed Depositary to the ICAV provide this report solely in favour of the investors of the Fund as a body for the year ended 31 December 2022 (“the Accounting Period”). This report is provided in accordance with the UCITS Regulations – European Communities (Undertakings for Collective Investment in Transferable Securities) Regulations 2011 (SI No 352 of 2011) as amended, (“the UCITS Regulations”). We do not, in the provision of this report, accept nor assume responsibility for any other purpose or person to whom this report is shown.

In accordance with our Depositary obligation as provided for under the UCITS Regulations, we have enquired into the conduct of the ICAV for the Accounting Period and we hereby report thereon to the investors of the Fund as follows;

We are of the opinion that the Fund has been managed during the Accounting Period, in all material respects:

- (i) in accordance with the limitations imposed on the investment and borrowing powers of the Sub-Fund by the constitutional documents, the Regulations and by the Central Bank (Supervision and Enforcement) Act 2013 (Section 48(1)) (Undertakings for Collective Investment in Transferable Securities) Regulations 2019 (“the Central Bank UCITS Regulations”); and
- (ii) otherwise in accordance with the provisions of the constitutional documents, the Regulations and the Central Bank UCITS Regulations.

# FAM Series UCITS ICAV

## Directors' Report

For the financial year ended 31 December 2022

The Directors of FAM Series UCITS ICAV (the "ICAV") submit their report together with the audited Financial Statements for the financial year ended 31 December 2022.

### Principal activities

The ICAV has been authorised by the Central Bank of Ireland (the "Central Bank") as an Irish Collective Asset-Management Vehicle pursuant to the Irish Collective Asset-Management Vehicles Act 2015 (the "ICAV Act"). The ICAV has been authorised pursuant to the European Communities (Undertakings for Collective Investment in Transferable Securities) Regulations, 2011 (as amended) and the Central Bank (Supervision and Enforcement) Act 2013 (Section 48(1)) (Undertakings for Collective Investment in Transferable Securities) Regulations 2019 (as amended).

The ICAV is structured as an umbrella entity composed of different Sub-Funds. Each Sub-Fund will represent a separate portfolio of assets of the ICAV and may have more than one Class or Series of Shares allocated to it.

### Statement of Directors' Responsibilities in Respect of the Financial Statements

The Directors are responsible for preparing the Financial Statements in accordance with applicable Irish law and International Financial Reporting Standards ("IFRS") as adopted by the European Union ("EU").

Irish company law requires the Directors to prepare Financial Statements for each financial year, which give a true and fair view of the state of affairs of the ICAV and of the profit or loss of the ICAV for that year. In preparing those Financial Statements, the Directors are required to:

- select suitable accounting policies and then apply them consistently;
- make judgments and estimates that are reasonable and prudent;
- prepare the Financial Statements on the going concern basis unless it is inappropriate to presume that the ICAV will not continue in business; and
- state whether the Financial Statements have been prepared in accordance with applicable accounting standards, identify those standards, and note the effect and reasons for any material departure from those standards.

The Directors confirm that they have complied with the above requirements in preparing the Financial Statements for the year ended 31 December 2022 (the "Financial Statements"). In carrying out these requirements, the Directors have appointed BNP Paribas Fund Administration Services (Ireland) Limited (the "Administrator") to act as administrator to the ICAV.

### Review of the business and future developments

A comprehensive overview of the ICAV's and its Sub-Funds' activities and its future developments are set out in the Investment Manager's reports. Investment objectives may change from time to time, these will be reflected in the prospectus of the ICAV and the relevant Sub-Fund supplement.

### Risks and uncertainties

The principal risks and uncertainties which the ICAV faces relate to the use of financial instruments and are listed in note 13 "Financial Instruments and Associated Risks".

### Results and dividends

The results for the financial year are shown in the Statement of Comprehensive Income on pages 107 to 121.

### Corporate Governance

The Directors have voluntarily adopted the 'Corporate Governance Code for Collective Investment Schemes and Management Companies', as published by Irish Funds in December 2011 (the "IF Code"), as the ICAV's corporate governance code. In respect of the financial year ended 31 December 2022, the Directors confirm compliance with the provisions of the IF Code.

### Secretary

The Secretary that served during the financial year is listed on page 4.

# FAM Series UCITS ICAV

## Directors' Report (continued)

For the financial year ended 31 December 2022

### Directors

The Directors of the ICAV at 31 December 2022 were:

Jim Finn (Irish resident)\*  
Fabio Melisso (Irish resident)\*\*  
Ciaran Brady (Irish resident)\*\*  
Lorenzo Di Pietrantonio (Irish resident)\*\* (appointed on 24 January 2022)

\* Independent non-executive Director

\*\* Non-executive Director

### Transactions involving Directors

Other than as disclosed in Note 12 to the Financial Statements, there are no contracts or arrangements of any significance in relation to the business of the ICAV in which the Directors or Secretary had any interest as defined in the ICAV Act at any time during the financial year.

### Connected Persons

In accordance with the requirements of the UCITS Regulations, all transactions carried out with the ICAV by the promoter, manager, trustee, investment adviser and associates/group companies ("connected persons") must be conducted at arm's length and be in the best interests of shareholders. The Directors are satisfied that there are arrangements (evidenced by written procedures) in place to ensure that the obligations set out in the UCITS Regulations are applied to all transactions with connected persons and that transactions with connected persons entered into during the year complied with the obligations set out in the UCITS Regulations.

### Accounting Records

The measures taken by the Directors to secure compliance with the ICAV's obligation to keep adequate accounting records are the use of appropriate accounting systems and procedures and employment of competent persons through the appointment of the Administrator. The accounting records are kept at the registered address of the Administrator at Termini, 3 Arkle Road, Sandyford, Dublin 18, D18 T6T7, Ireland.

### Statement of Relevant Audit Information

The Directors acknowledge that they are responsible for providing all relevant audit information to the ICAV's statutory auditors in connection with preparing their report in accordance with section 330 of the Companies Act 2014 (as amended). The Directors confirm that:

- so far as the Directors are aware, there is no relevant audit information of which the ICAV's statutory auditors are not aware; and
- each of the Directors has taken all the steps that ought to have been taken as a Director in order to make himself or herself aware of any relevant audit information and to establish that the ICAV's statutory auditors are aware of that information.

### Going concern

The ICAV's management has made an assessment of the ICAV's ability to continue as a going concern and is satisfied that the ICAV has the resources to continue in business for the foreseeable future. Furthermore, management is not aware of any material uncertainties that may cast significant doubt upon the ICAV's ability to continue as a going concern.

### Independent Auditors

Deloitte Ireland LLP, Chartered Accountants and Statutory Audit Firm were appointed auditors for the financial year.

# FAM Series UCITS ICAV

## Directors' Report (continued)

For the financial year ended 31 December 2022

### Events during the financial year

#### Covid 19

The impact of the coronavirus outbreak was profound across all aspects of society. In developed economies, it is clear that the worst of the impact is now over. However, there is an expectation that seasonal peaks and new variants could give rise to renewed travel restrictions, enhanced health screenings at ports of entry and elsewhere, disruption of and delays in healthcare service preparation and delivery and supply chain disruptions which will create ongoing challenges. Widescale and comprehensive vaccination programmes have been put in place in many countries which have had a positive effect. Nevertheless, the impact of COVID-19 continues to adversely affect the economies of many nations across the globe and this in turn may continue to impact investments held by each Fund.

#### Russia/Ukraine Conflict and sanctions

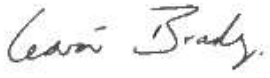

The outbreak of war in Ukraine and the related sanctions targeted against the Russian Federation has impacted the European and Global economies. The direct exposure to Ukraine, Russia or Belarus was and continues to be not material to the overall ICAV. However, the impact on the general economic situation may require in the future revisions of certain assumptions and estimates. The Directors are carefully monitoring the situation as well as its potential impacts on the ICAV. The ICAV is fully capable of continuing its usual operations.

All disclosures relating to events during the year ended 31 December 2022 are disclosed in Note 19 of the Financial Statements.

#### Events post financial year end

All disclosures relating to events after the year ended 31 December 2022 are disclosed in Note 20 of the Financial Statements.

Signed for and on behalf of the board of Directors by

Ciarán Brady

## INDEPENDENT AUDITOR'S REPORT TO THE SHAREHOLDERS OF FAM SERIES ICAV

### Report on the audit of the financial statements

#### Opinion on the financial statements of FAM Series ICAV (the 'ICAV')

---

In our opinion the financial statements:

- give a true and fair view of the assets, liabilities and financial position of the ICAV as at 31 December 2022 and of the result for the financial year then ended; and
- have been properly prepared in accordance with the relevant financial reporting framework and the Applicable Regulations.

The financial statements we have audited comprise:

- the Statement of Financial Position;
- the Statement of Comprehensive Income;
- the Schedule of Changes in Net Assets Attributable to Holders of Redeemable Participating Shares;
- the Statement of Cashflows and
- the related notes 1 to 23 including a summary of significant accounting policies as set out in note 2.

The relevant financial reporting framework that has been applied in the preparation of the financial statements is the Irish Collective Asset-Management Vehicles Acts 2015-2020 ("the ICAV Act") and International Financial Reporting Standards (IFRS) as adopted by the European Union ("the relevant financial reporting framework").

The applicable regulations that have been applied in their preparation is the European Communities (Undertakings for Collective Investment in Transferable Securities) Regulations, 2011 and Central Bank (Supervision and Enforcement) Act 2013 (Section 48(1)) (Undertakings for Collective Investment in Transferable Securities) Regulations, 2019 ("the applicable Regulations").

#### Basis for opinion

---

We conducted our audit in accordance with International Standards on Auditing (Ireland) (ISAs (Ireland)) and applicable law. Our responsibilities under those standards are described below in the "*Auditor's responsibilities for the audit of the financial statements*" section of our report.

We are independent of the ICAV in accordance with the ethical requirements that are relevant to our audit of the financial statements in Ireland, including the Ethical Standard issued by the Irish Auditing and Accounting Supervisory Authority (IAASA), as applied to public interest entities, and we have fulfilled our other ethical responsibilities in accordance with these requirements.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

#### Summary of our audit approach

##### Key audit matters

The key audit matters that we identified in the current year were:

- Valuation of financial assets and liabilities at fair value through profit or loss
- Existence of financial assets and liabilities at fair value through profit or loss

<b>Materiality</b>	<p>The materiality that we used in the current year was 1% of average net assets determined in respect of each sub-fund and 0.50% of average net assets for the following sub-funds:</p> <ol style="list-style-type: none"> <li>1. Fineco AM MSCI World Semiconductors and Semiconductor Equipment UCITS ETF</li> <li>2. Fineco AM MSCI ACWI IMI Cyber Security UCITS ETF</li> <li>3. Fineco AM MSCI World Metals and Mining UCITS ETF</li> <li>4. Fineco AM MSCI USD IG Liquid SRI Sustainable Corporate Bond UCITS ETF</li> <li>5. Fineco AM MSCI World Consumer Staples ESG Leaders UCITS ETF</li> <li>6. Fineco AM MSCI World Financials ESG Leaders UCITS ETF</li> <li>7. Fineco AM MSCI EUR IG SRI Sustainable ex Fossil Fuel (1-3y) Corporate Bond UCITS ETF</li> </ol>
<b>Scoping</b>	<p>Our audit is a risk-based approach taking into account the structure of the ICAV, types of investments, the involvement of the third-party service providers, the accounting processes and controls in place and the industry in which the ICAV operates.</p>
<b>Significant changes in our approach</b>	<p>There have been no significant changes in our approach from our prior year audit.</p>

## Conclusions relating to going concern

In auditing the financial statements, we have concluded that the directors' use of the going concern basis of accounting in the preparation of the financial statements is appropriate.

Our evaluation of the directors' assessment of the ICAV's ability to continue to adopt the going concern basis of accounting included:

- Obtaining an understanding of the relevant controls in place regarding going concern as part of our audit risk assessment procedures.
- Holding discussions with management on the directors' going concern assessment, the future plans for the ICAV and the feasibility of those plans.
- Challenging the reasonableness of the key assumptions applied by the directors in their assessment.
- Reviewing all board meeting minutes during the period up to the date of approval of the financial statements, for evidence of any discussions and/or decisions that could impact the ICAV's ability to continue as a going concern.
- Reviewing the capital activity and NAV movements, subsequent to the financial year end.
- Assessing the adequacy of the relevant going concern disclosures made in the financial statements.

Based on the work we have performed, we have not identified any material uncertainties relating to events or conditions that, individually or collectively, may cast significant doubt on the ability to continue as a going concern for a period of at least twelve months from when the financial statements are authorised for issue.

Our responsibilities and the responsibilities of the directors with respect to going concern are described in the relevant sections of this report.

## Key Audit Matters

Key audit matters are those matters that, in our professional judgment, were of most significance in our audit of the financial statements of the current financial year and include the most significant assessed risks of material misstatement (whether or not due to fraud) we identified, including those which had the greatest effect on: the overall audit strategy, the allocation of resources in the audit; and directing the efforts of the engagement team. These matters were addressed in the context of our audit of the financial statements as a whole, and in forming our opinion thereon, and we do not provide a separate opinion on these matters.

### Valuation of financial assets and liabilities at fair value through profit or loss

#### Key audit matter description

For the financial year ended, the financial assets and liabilities at fair value through profit or loss make up a significant percentage of the total net assets of the ICAV.

The valuation of financial assets and liabilities at fair value through profit or loss is considered a key audit matter as it is the most significant number on the Statement of Financial Position, is a key driver of performance and due to the potential for management judgement and estimation in the valuation.

As financial assets and liabilities at fair value through profit or loss are a key driver of performance and due to their significance to the net asset value, there is a risk that these investments might not be correctly valued, in accordance with IFRS.

Refer also to note 14 in the financial statements.

#### How the scope of our audit responded to the key audit matter

- We considered the valuation basis used in light of the valuation policy as stipulated in the ICAV's Prospectus documents and the requirements of IFRS.
- We obtained the BNP Paribas Fund Administration Services (Ireland) Limited (the "Administrator") ISAE 3402 Report and identified the key controls in place over the valuation process and reviewed those key controls for any exceptions.
- We independently valued all exchange traded securities using our own market feeds.
- We reviewed the adequacy of the fair value levelling disclosures in the financial statements.
- We revalued swap positions on a sample basis.
- We reviewed the fair value levelling disclosures in the financial statements to ensure they were appropriate.

### Existence of investments

#### Key audit matter description

For the financial year ended, the financial assets and liabilities at fair value through profit or loss make up a significant percentage of the total net assets of the ICAV.

There is a risk that financial assets and liabilities at fair value through profit or loss recorded might not exist or might not be owned by the ICAV. Financial assets and liabilities at fair value through profit or loss are considered to be a key driver for the ICAV's performance.

Therefore, due to the significance of investments to the ICAV's financial statements, we have determined this as a key audit matter.

Refer also to note 14 in the financial statements.

## How the scope of our audit responded to the key audit matter

- We obtained the BNP Paribas Fund Administration Services (Ireland) Limited (the “Administrator”) ISAE 3402 Report and identified the key controls in place over the reconciliation process and reviewed those key controls for any exceptions.
- We obtained direct confirmation of the investments of the ICAV from the Depository and brokers at year-end. Any reconciling items between the confirmations and the ICAV’s investment portfolios were investigated to ensure that trades were recorded in the correct reporting period.
- We completed alternative procedures in relation to a number of positions for which confirmations were not available at the issuance of this report.

Our audit procedures relating to these matters were designed in the context of our audit of the financial statements as a whole, and not to express an opinion on individual accounts or disclosures. Our opinion on the financial statements is not modified with respect to any of the risks described above, and we do not express an opinion on these individual matters.

## Our application of materiality

We define materiality as the magnitude of misstatement in the financial statements that makes it probable that the economic decisions of a reasonably knowledgeable person would be changed or influenced. We use materiality both in planning the scope of our audit work and in evaluating the results of our work.

Based on our professional judgement, we determined materiality for the financial statement as a whole as follows:

<b>Basis for determining materiality</b>	<p>The materiality that we used in the current year was 1% of average net assets determined in respect of each sub-fund and 0.50% of average net assets for the following sub-funds:</p> <ol style="list-style-type: none"> <li>1. Fineco AM MSCI World Semiconductors and Semiconductor Equipment UCITS ETF</li> <li>2. Fineco AM MSCI ACWI IMI Cyber Security UCITS ETF</li> <li>3. Fineco AM MSCI World Metals and Mining UCITS ETF</li> <li>4. Fineco AM MSCI USD IG Liquid SRI Sustainable Corporate Bond UCITS ETF</li> <li>5. Fineco AM MSCI World Consumer Staples ESG Leaders UCITS ETF</li> <li>6. Fineco AM MSCI World Financials ESG Leaders UCITS ETF</li> <li>7. Fineco AM MSCI World Information Technology ESG Leaders 20% Capped UCITS ETF</li> <li>8. Fineco AM MSCI USD HY SRI Sustainable Corporate Bond UCITS ETF</li> <li>9. Fineco AM MSCI EUR IG SRI Sustainable ex Fossil Fuel Corporate Bond UCITS ETF</li> <li>10. Fineco AM MSCI EUR HY SRI Sustainable Corporate Bond UCITS ETF</li> <li>11. Fineco AM MSCI EUR IG SRI Sustainable ex Fossil Fuel (1-3y) Corporate Bond UCITS ETF</li> </ol>
<b>Rationale for the benchmark applied</b>	<p>The Net Asset Value of the ICAV is the primary indicator of the size and performance of the ICAV and is considered the key area of interest for the shareholders, who are the primary users of the financial statements. The use of the average net Asset value is considered the industry practice benchmark for Investment Funds.</p>

The materiality used by the former auditor in the audit of the prior year financial statements was 1% of average net assets of the ICAV for all sub-funds.

We set performance materiality at a level lower than materiality to reduce the probability that, in aggregate, uncorrected and undetected misstatements exceed the materiality for the financial statements as a whole. Performance materiality was set at 50% of materiality for the 2022 audit. In determining performance materiality, we considered the following factors:

- our understanding of the ICAV;
- the quality of the control environment;
- the nature and extent of misstatements identified in previous audits; and
- our expectations in relation to misstatements in the current period.

We agreed with the Board of Directors that we would report to the Board of Directors all audit differences in excess of 5% of materiality, as well as differences below that threshold that, in our view, warranted reporting on qualitative grounds. We also report to the Board of Directors on disclosure matters that we identified when assessing the overall presentation of the financial statements.

## An overview of the scope of our audit

---

Our audit is a risk based approach taking into account the structure of the ICAV, types of investments, the involvement of the third parties service providers, the accounting processes and controls in place and the industry in which the ICAV operates. The ICAV is incorporated as an Irish collective asset management vehicle with variable capital and segregated liability between sub-funds. The ICAV is authorised by the Central Bank of Ireland (the “Central Bank”) as a qualifying investor alternative investment fund.

The ICAV is organised as an umbrella fund with segregated liability between sub-funds. We assess the risks of each sub-fund separately. We have conducted our audit based on the books and records maintained by the administrator of FAM Series ICAV at 32 Molesworth Street, Dublin 2, Ireland.

## Other information

---

The other information comprises the information included in the Annual Report and Audited Financial Statements, other than the financial statements and our auditor’s report thereon. The directors are responsible for the other information contained within.

Our opinion on the financial statements does not cover the other information and, except to the extent otherwise explicitly stated in our report, we do not express any form of assurance conclusion thereon.

Our responsibility is to read the other information and, in doing so, consider whether the other information is materially inconsistent with the financial statements or our knowledge obtained in the audit or otherwise appears to be materially misstated. If we identify such material inconsistencies or apparent material misstatements, we are required to determine whether there is a material misstatement in the financial statements or a material misstatement of the other information. If, based on the work we have performed, we conclude that there is a material misstatement of this other information, we are required to report that fact.

We have nothing to report in this regard.

## Responsibilities of directors

---

As explained more fully in the Statement of Directors’ responsibilities, the directors are responsible for the preparation of the financial statements and for being satisfied that they give a true and fair view and otherwise comply with the ICAV Act, and for such internal control as the directors determine is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, the directors are responsible for assessing the ICAV’s ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless the directors either intend to liquidate the ICAV or to cease operations, or have no realistic alternative but to do so.

## Auditor's responsibilities for the audit of the financial statements

---

Our objectives are to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with ISAs (Ireland) will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these financial statements.

A further description of our responsibilities for the audit of the financial statements is located on IAASA's website at: <https://iaasa.ie/publications/description-of-the-auditors-responsibilities-for-the-audit-of-the-financial-statements/>. This description forms part of our auditor's report.

## Extent to which the audit was considered capable of detecting irregularities, including fraud

---

Irregularities, including fraud, are instances of non-compliance with laws and regulations. We design procedures in line with our responsibilities, outlined above, to detect material misstatements in respect of irregularities, including fraud. The extent to which our procedures are capable of detecting irregularities, including fraud is detailed below.

### Identifying and assessing potential risks related to irregularities

In identifying and assessing risks of material misstatement in respect of irregularities, including fraud and non-compliance with laws and regulations, we considered the following:

- the nature of the industry and sector, control environment and business performance;
- results of our enquiries of management about their own identification and assessment of the risks of irregularities;
- any matters we identified having obtained and reviewed the ICAV's documentation of their policies and procedures relating to:
  - identifying, evaluating and complying with laws and regulations and whether they were aware of any instances of non-compliance;
  - detecting and responding to the risks of fraud and whether they have knowledge of any actual, suspected or alleged fraud;
  - the internal controls established to mitigate risks of fraud or non-compliance with laws and regulations;
- the matters discussed among the audit engagement team and relevant internal specialists, including IT and valuations regarding how and where fraud might occur in the financial statements and any potential indicators of fraud.

As a result of these procedures, we considered the opportunities and incentives that may exist within the organisation for fraud and identified the greatest potential for fraud in the following areas: Valuation of financial assets and liabilities at fair value through profit or loss and Revenue Recognition. In common with all audits under ISAs (Ireland), we are also required to perform specific procedures to respond to the risk of management override.

We also obtained an understanding of the legal and regulatory framework that the ICAV operates in, focusing on provisions of those laws and regulations that had a direct effect on the determination of material amounts and disclosures in the financial statements. The key laws and regulations we considered in this context included the ICAV Act, Listing Rules and the Applicable Regulations.

In addition, we considered provisions of other laws and regulations that do not have a direct effect on the financial statements but compliance with which may be fundamental to the ICAV's ability to operate or to avoid a material penalty. These included matters regulated by the Central Bank of Ireland.

## **Audit response to risks identified**

As a result of performing the above, we identified 'Valuation of financial assets at fair value through profit or loss as a key audit matter related to the potential risk of fraud. The key audit matters section of our report explains the matter in more detail and also describes the specific procedures we performed in response to that key audit matter.

In addition to the above, our procedures to respond to risks identified included the following:

- reviewing the financial statement disclosures and testing to supporting documentation to assess compliance with provisions of relevant laws and regulations described as having a direct effect on the financial statements;
- enquiring of management and the Board of Directors concerning actual and potential litigation and claims;
- performing analytical procedures to identify any unusual or unexpected relationships that may indicate risks of material misstatement due to fraud;
- reading minutes of meetings of those charged with governance and reviewing correspondence with the Central Bank of Ireland; and
- In addressing the risk of fraud in Revenue Recognition, independently valuing all exchange traded securities using our own market feeds and completing an unrealised gain/loss reconciliation.
- In addressing the risk of fraud through management override of controls, testing the appropriateness of journal entries and other adjustments; assessing whether the judgements made in making accounting estimates are indicative of a potential bias; and evaluating the business rationale of any significant transactions that are unusual or outside the normal course of business.

We also communicated relevant identified laws and regulations and potential fraud risks to all engagement team members including internal specialists, and remained alert to any indications of fraud or non-compliance with laws and regulations throughout the audit.

## **Report on other legal and regulatory requirements**

### **Matters on which we are required to report by the ICAV Act and the Applicable Regulations**

---

In our opinion, the information given in the directors' report is consistent with the financial statements. The directors' report has been prepared in accordance with the ICAV Act.

### **Matters on which we are required to report by exception**

---

Based on the knowledge and understanding of the ICAV and its environment obtained in the course of the audit, we have not identified material misstatements in the directors' report.

We have nothing to report in respect of the provisions in the ICAV Act which require us to report to you if, in our opinion, the disclosures of directors' remuneration specified by the ICAV Act are not made.

## Opinion on other matters prescribed by the Applicable Regulations

Based solely on the work undertaken in the course of the audit, we report that:

- We have obtained all the information and explanations which we consider necessary for the purposes of our audit.
- In our opinion the accounting records of the ICAV were sufficient to permit the financial statements to be readily and properly audited.
- The financial statements are in agreement with the accounting records.

## Other matters which we are required to address

---

We were appointed by the Board of Directors on 23 November 2022 to audit the financial statements for the year ending 31 December 2022. The period of total uninterrupted engagement including previous renewals and reappointments of the firm is 5 years, covering the year ending 31 December 2022.

The non-audit services prohibited by IAASA's Ethical Standard were not provided and we remained independent of the ICAV in conducting the audit.

Our audit opinion is consistent with the additional report to the Board of Directors we are required to provide in accordance with ISA (Ireland) 260.

## Use of our report

---

This report is made solely to the ICAV's shareholders, as a body, in accordance with Section 120(1) (b) of the ICAV Act. Our audit work has been undertaken so that we might state to the ICAV's shareholders those matters we are required to state to them in an auditor's report and for no other purpose. To the fullest extent permitted by law, we do not accept or assume responsibility to anyone other than the ICAV and the ICAV's shareholders as a body, for our audit work, for this report, or for the opinions we have formed.

## Notes to the Financial Statements for the financial year ended 31 December 2022

### 1. General Information

FAM Series UCITS ICAV (the “ICAV”) is an umbrella Irish Collective Asset-management Vehicle with segregated liability between its Sub-Funds and authorised pursuant to the European Communities (Undertakings for Collective Investment in Transferable Securities) Regulations, 2011 (as amended) and the Central Bank (Supervision and Enforcement) Act 2013 (Section 48(1)) (Undertakings for Collective Investment in Transferable Securities) Regulations 2019 (as amended). The ICAV was incorporated on 8 March 2018. On 7 October 2022, FAM Series UCITS ICAV listed on the Italian Stock Exchange (Borsa Italiana).

The ICAV is structured as an umbrella entity composed of different sub-funds (the “Sub-Funds”). Each Sub-Fund will represent a separate portfolio of assets of the ICAV and may have more than one Class or Series of Shares allocated to it.

Effective 9 February 2022, the following Sub-Funds of the ICAV changed their name:

- Emerging Markets Debt FAM Fund was formerly known as GS Emerging Markets Debt FAM Fund.

Effective 19 October 2022, the following Sub-Funds of the ICAV changed their name:

- Fineco AM Global Premium Equities Fund was formerly known as Global Premium Equities Fund.

Effective 25 November 2022, the following Sub-Funds of the ICAV changed their name:

- Fineco AM Investment Grade Euro Aggregate Bond Fund was formerly known as FAM Investment Grade Euro Aggregate Bond Fund.
- Fineco AM Euro Corporate Bond Fund was formerly known as Euro Corporate Bond FAM Fund.
- Fineco AM Euro Corp Bonds Fund was formerly known as FAM Euro Corporate Bonds Fund.
- Fineco AM Euro Credit Bond Fund was formerly known as Euro Credit Bond FAM Fund.
- Fineco AM European Corporate Bond Fund was formerly known as European Corporate Bond FAM Fund.
- Fineco AM Global Equity Fund was formerly known as FAM Global Equity Fund.
- Fineco AM Global Equities Income Fund was formerly known as FAM Global Equities Income Fund.

Effective 1 June 2021, Fineco Asset Management Designated Activity Company (the “Manager”) appointed HSBC Global Asset Management (France) to act as investment advisor (the “Investment Advisor”) to Euro Credit Bond Fund.

Effective 10 June 2021, Fineco Asset Management Designated Activity Company (the “Manager”) appointed M&G Investment Management Limited to act as investment advisor (the “Investment Advisor”) to European Corporate Bond Fund.

Effective 17 June 2021, Fineco Asset Management Designated Activity Company (the “Manager”) appointed M&G Investment Management Limited to act as investment advisor (the “Investment Advisor”) to Euro Corporate Bond Fund.

Effective 13 December 2021, Fineco Asset Management Designated Activity Company (the “Manager”) appointed Vontobel Asset Management S.A. to act as investment advisor (the “Investment Advisor”) to Fineco AM Global Equity Fund.

## Notes to the Financial Statements for the financial year ended 31 December 2022 (continued)

### 1. General Information (continued)

The investment objective of the below Sub-Funds is to achieve income and capital growth:

- Fidelity Euro Bond FAM Fund
- Fidelity Euro Short Term Bond FAM Fund

The investment objective of Fidelity Global Dividend FAM Fund is to achieve income and long-term capital growth principally through investment in global income producing equities.

The investment objective of Fidelity World FAM Fund is to achieve long-term capital growth from a portfolio primarily made up of the equity securities of companies around the world.

The investment objective of US Equity Value FAM Fund is to provide long-term capital growth by investing primarily in a value style biased portfolio of US companies.

The investment objective of M&G North American Value FAM Fund is to achieve total returns over the medium term of typically three to five years, through a combination of income and capital appreciation.

The investment objective of the below Sub-Funds is to maximise total return, consisting of income and capital appreciation:

- Amundi Emerging Markets Bond FAM Fund
- European High Yield Bond FAM Fund
- Vontobel Emerging Markets Debt FAM Fund

The investment objective of Amundi Strategic Bond FAM Fund is to achieve capital appreciation over the medium to long term.

The investment objective of Amundi European Equity Value FAM Fund is capital appreciation over the medium to long term through investment in a diversified portfolio of European equity securities.

The investment objective of the below Sub-Funds is to maximise total returns:

- Emerging Markets Bond Hard Currency FAM Fund
- Euro Bond FAM Fund
- Euro Corporate Fixed Income FAM Fund
- Euro Short Duration Bond FAM Fund

The investment objective of the below Sub-Funds is to maximise total returns through a combination of income and capital appreciation:

- Fineco AM European Corporate Bond Fund
- M&G Optimal Income FAM Fund

The investment objective of Schroder Euro Bond FAM Fund is to provide capital growth and income over the long term by investing in fixed and floating rate bonds denominated in Euro or hedged back to Euro.

The investment objective of European Equity FAM Fund is to provide long-term capital growth by investing primarily in European companies.

# FAM Series UCITS ICAV

## Notes to the Financial Statements for the financial year ended 31 December 2022 (continued)

### 1. General Information (continued)

The investment objective of the below Sub-Funds is to achieve long-term capital growth:

- Fineco AM Global Premium Equities Fund
- Fineco AM Global Equity Fund
- Flexible Equity Strategy FAM Fund

The investment objective of Fineco AM Euro Corp Bonds Fund is to generate a capital appreciation that exceeds the iBoxx Euro Corporate index (the "Index").

The investment objective of Fineco AM Investment Grade Euro Aggregate Bond Fund is to achieve total returns, meaning capital appreciation plus income from its investments, through investment in bonds.

The investment objective of Fineco AM Euro Corporate Bond Fund is to provide a total return (income and capital growth) in excess of that generated by the Index.

The investment objective of Fineco AM Global Equities Income Fund is to generate high levels of income, with the potential for long-term capital growth.

The investment objective of Invesco Global Total Return Bond FAM Fund is to maximize total return primarily through investment in a flexible allocation of fixed income securities (including corporate bonds, government bonds, treasury bonds, municipal bonds and asset backed securities).

The investment objective of Nordea Stable Performance FAM Fund is to preserve Shareholder's capital and provide stable growth to Shareholders over the medium to long term.

The investment objective of Fineco AM Euro Credit Bond Fund is to provide long term total return (meaning capital growth and income) by investing in a portfolio of Investment Grade rated fixed income securities (including corporate bonds and treasury bonds) denominated in Euro.

The investment objective of Euro High Yield Bond FAM Fund is to provide long term total return (meaning capital growth and income) by primarily investing in a portfolio of Euro denominated fixed income securities (including corporate bonds and treasury bonds).

The investment objective of Emerging Markets Debt FAM Fund is to provide income and capital growth over the long term.

The investment objective of Jupiter Flexible Income FAM Fund is to provide regular income with the prospect of long-term capital growth.

The investment objective of Infusive Consumer Alpha Global Leaders FAM Fund is to provide capital appreciation over the long term.

The investment objective of Fidelity Sustainable Water and Waste FAM Fund is to provide long term capital growth by investing primarily in equity securities of companies.

The investment objective of JPMorgan China A-Shares Opportunities FAM Fund is to provide long term capital growth by investing primarily in companies of the People's Republic of China (PRC).

The investment objective of Diversity and Inclusion FAM Fund is to maximise total returns through a combination of income and capital appreciation through investing in companies that have demonstrable gender and/or ethnic diversity, or which provide solutions empowering social equality.

# FAM Series UCITS ICAV

## Notes to the Financial Statements for the financial year ended 31 December 2022 (continued)

### 1. General Information (continued)

#### (a) Basis of Preparation

These Financial Statements have been prepared in accordance with International Financial Reporting Standards ('IFRS') issued by the International Accounting Standards Board ("IASB") and have been prepared on the historical cost basis except for certain financial instruments that are measured at fair values at the end of each reporting period.

#### Going Concern

The ICAV's management has made an assessment of the ICAV's ability to continue as a going concern and is satisfied that the ICAV has the resources to continue in business for the foreseeable future. Furthermore, the management is not aware of any material uncertainties that may cast significant doubt upon the ICAV's ability to continue as a going concern. Therefore, the Financial Statements are prepared on the going concern basis.

#### New standards and interpretations effective 1 January 2022

##### Onerous Contracts – Costs of Fulfilling a Contract – Amendments to IAS 37

In May 2020, the International Accounting Standards Board ("IASB") issued amendments to IAS 37 Provisions, Contingent Liabilities and Contingent Assets to specify which costs an entity needs to include when assessing whether a contract is onerous or loss-making.

In particular, the amendments 1 January 2022 clarify:

Entities that previously applied the incremental cost approach will see provisions increase to reflect the inclusion of costs related directly to contract activities, whilst entities that previously recognised contract loss provisions using the guidance from the former standard, IAS 11 Construction Contracts, will be required to exclude the allocation of indirect overheads from their provisions.

This amendment did not have a material impact on the ICAV.

There are no standards, interpretations or amendments to existing standards that are effective that would be expected to have a significant impact on the ICAV.

##### (b) New standards, amendments and interpretations issued but not effective for the financial year beginning 1 January 2022 and not early adopted

##### Classification of Liabilities as Current or Non-current - Amendments to IAS 1

In January 2020, the Board issued amendments to paragraphs 69 to 76 of IAS 1 Presentation of Financial Statements to specify the requirements for classifying liabilities as current or non-current.

In particular, the amendments which will become effective 1 January 2023 clarify:

- What is meant by a right to defer settlement.
- That a right to defer must exist at the end of the reporting period.
- That classification is unaffected by the likelihood that an entity will exercise its deferral right.
- That only if an embedded derivative in a convertible liability is itself an equity instrument, would the terms of a liability not impact its classification.

This amendment is not expected to have a material impact on the ICAV.

# FAM Series UCITS ICAV

Notes to the Financial Statements for the financial year ended 31 December 2022 (continued)

## 1. General Information (continued)

**(b) New standards, amendments and interpretations issued but not effective for the financial year beginning 1 January 2022 and not early adopted (continued)**

### Definition of Accounting Estimates - Amendments to IAS 8

In February 2021, the Board issued amendments to IAS 8, in which it introduces a new definition of ‘accounting estimates’.

In particular, the amendments which will become effective 1 January 2023 clarify:

- the distinction between changes in accounting estimates and changes in accounting policies and the correction of errors.
- how entities use measurement techniques and inputs to develop accounting estimates.

This amendment is not expected to have a material impact on the ICAV.

### Disclosure of Accounting Policies - Amendments to IAS 1 and IFRS Practice Statement 2

In February 2021, the Board issued amendments to IAS 1 and IFRS Practice Statement 2 Making Materiality Judgements (the PS), in which it provides guidance and examples to help entities apply materiality judgements to accounting policy disclosures.

In particular, the amendments which will become effective 1 January 2023 clarify:

- that replacing the requirement for entities to disclose their ‘significant’ accounting policies with a requirement to disclose their ‘material’ accounting policies.
- that adding guidance on how entities apply the concept of materiality in making decisions about accounting policy disclosure.

This amendment is not expected to have a material impact on the ICAV.

There are no standards, interpretations or amendments to existing standards that are not yet effective that would be expected to have a significant impact on the ICAV.

## 2. Statement of Accounting Policies

The significant accounting policies adopted by the ICAV are as follows:

### 2.1 Accounting Policies

#### (a) Financial Assets and Liabilities at Fair Value through Profit or Loss (“FVTPL”)

##### (i) Classification

The ICAV classifies financial assets and financial liabilities into the following categories:

Financial assets at FVTPL:

*Designated at FVTPL:*

- *Transferable Securities*
  - Bonds
  - Equities
  - Investment funds
  - Exchange traded commodity

# FAM Series UCITS ICAV

Notes to the Financial Statements for the financial year ended 31 December 2022 (continued)

## 2. Statement of Accounting Policies (continued)

### 2.1 Accounting Policies (continued)

#### (a) Financial Assets and Liabilities at Fair Value through Profit or Loss (“FVTPL”) (continued)

##### (i) Classification (continued)

- *Derivative Instruments*
  - Futures contracts
  - Forward currency contracts
  - Interest rate swaps
  - Total return swaps
  - Option contracts
  - Rights and Warrants
  - Contracts for difference
  
- *Money Market Instruments*
  - Commercial papers
  - Treasury bills

Financial assets at amortised cost:

- *Loans and receivables: cash and cash equivalents and interest and other receivables.*

Financial liabilities at FVTPL:

*Designated at FVTPL:*

- *Derivative Instruments*
  - Futures contracts
  - Forward currency contracts
  - Interest rate swaps
  - Total return swaps
  - Option contracts
  - Rights and Warrants
  - Contracts for difference

Financial liabilities at amortised cost:

- *Other liabilities: accrued expenses.*

The ICAV designates all equity securities, bonds, funds, treasury bills, exchange traded commodity, futures contracts, forward currency contracts, interest rate swaps, option contracts, contract for differences and rights and warrants at FVTPL on initial recognition because it manages these securities on a fair value basis in accordance with its documented investment strategy. Internal reporting and performance measurement of these securities are on a fair value basis.

A non-derivative financial asset with fixed or determinable payments may be classified as a loan and receivable unless it is quoted in an active market or is an asset for which the holder may not recover substantially all of its initial investment, other than because of credit deterioration.

## 2. Statement of Accounting Policies (continued)

### 2.1 Accounting Policies (continued)

#### (a) Financial Assets and Liabilities at Fair Value through Profit or Loss (“FVTPL”) (continued)

##### (ii) Initial Measurement

Financial assets and financial liabilities at FVTPL are initially recognised on the trade date, which is the date on which the ICAV becomes a party to the contractual provisions of the instrument. Other financial assets and financial liabilities are recognised on the date on which they are originated.

Purchases and sales of financial instruments are accounted for on the trade date. Realised gains and losses on disposals of financial instruments are calculated using the First In, First Out (“FIFO”) method.

##### (iii) Recognition

Financial instruments categorised at FVTPL are measured initially at fair value, with transaction costs for such instruments being recognised directly in the Statement of Comprehensive Income. Financial assets and financial liabilities are recognised on the Statement of Financial Position when the ICAV becomes party to the contractual provisions of the instrument. A regular purchase of financial assets is recognised using trade date accounting. From this date any gains or losses arising from changes in fair value of the financial assets or financial liabilities are recorded.

##### (iv) Fair Value Measurement

‘Fair value’ is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date in the principal or, in its absence, the most advantageous market to which the ICAV has access at that date. The fair value of a liability reflects its non-performance risk.

When available, the ICAV measures the fair value of an instrument using the quoted price in an active market for that instrument. A market is regarded as active if transactions for the asset or liability take place with sufficient frequency and volume to provide pricing information on an on-going basis.

If there is no quoted price in an active market, then the ICAV uses valuation techniques that maximise the use of relevant observable inputs and minimise the use of unobservable inputs. The chosen valuation technique incorporates all of the factors that market participants would take into account in pricing a transaction.

Investments in open-ended investment funds are valued at fair value at the latest available unaudited net asset value for the shares or units obtained from the relevant administrator. The changes in the daily net asset value of these shares are recognised as net gains/losses on investment activities in the Statement of Comprehensive Income.

The ICAV recognises transfers between levels of the fair value hierarchy as at the end of the reporting period during which the change has occurred.

##### (v) Amortised Cost Measurement

The amortised cost of a financial asset or financial liability is the amount at which the financial asset or financial liability is measured at initial recognition, minus principal repayments, plus or minus the cumulative amortisation using the effective interest method of any difference between the initial amount recognised and the maturity amount, minus any reduction for impairment.

Notes to the Financial Statements for the financial year ended 31 December 2022 (continued)

## 2. Statement of Accounting Policies (continued)

### 2.1 Accounting Policies (continued)

#### (a) Financial Assets and Liabilities at Fair Value through Profit or Loss (“FVTPL”) (continued)

##### (vi) Impairment

IFRS 9 replaces the ‘incurred loss’ model in IAS 39 with an ‘expected credit loss’ (“ECL”) model. The new impairment model applies to financial assets measured at amortised cost and debt investments at FVOCI, but not to investments in equity instruments. Under IFRS 9, credit losses are recognised earlier than under IAS 39.

A financial asset or liability not classified at FVTPL is assessed at each reporting date to determine whether there is objective evidence of impairment. A financial asset or a group of financial assets is ‘impaired’ if there is objective evidence of impairment as a result of one or more events that occurred after the initial recognition of the asset(s) and that loss event(s) had an impact on the estimated future cash flows of that asset(s) that can be estimated reliably.

Objective evidence that financial assets are impaired includes significant financial difficulty of the borrower or issuer, default or delinquency by a borrower, restructuring of the amount due on terms that the ICAV would not otherwise consider, indications that a borrower or issuer will enter bankruptcy, or adverse changes in the payment status of the borrower.

An impairment loss in respect of a financial asset measured at amortised cost is calculated as the difference between its carrying amount and the present value of the estimated future cash flows discounted at the asset’s original effective interest rate. Losses are recognised in profit or loss and reflected in an allowance account against receivables. Interest on the impaired asset continues to be recognised, if an event occurring after the impairment was recognised causes the amount of impairment loss to decrease, then the decrease in impairment loss is reversed through profit or loss.

##### (vii) Derecognition

The ICAV derecognises a financial asset when the contractual rights to the cash flows from the asset expire, or it transfers the rights to receive the contractual cash flows in a transaction in which substantially all of the risks and rewards of ownership of the financial asset are transferred or in which the ICAV neither transfers nor retains substantially all of the risks and rewards of ownership and does not retain control of the financial asset.

On derecognition of a financial asset, the difference between the carrying amount of the asset (or the carrying amount allocated to the portion of the asset that is derecognised) and the consideration received (including any new asset obtained less any new liability assumed) is recognised in profit or loss. Any interest in such transferred financial assets that is created or retained by the ICAV is recognised as a separate asset or liability.

The ICAV enters into transactions whereby it transfers assets recognised on its Statement of Financial Position, but retains either all or substantially all of the risks and rewards of the transferred assets. If all or substantially all of the risks and rewards of the transferred assets are retained, then transferred assets are not derecognised. Transfer of assets usually includes sale and repurchase agreements where all or substantially all of the risks and rewards are retained.

The ICAV derecognises a financial liability when its contractual obligations are discharged, cancelled, or expired.

#### (b) Transferable Securities

##### Investment Funds

The Sub-Funds invests in a diversified portfolio of collective investment schemes, whether open or closed ended, regulated or unregulated, including investment companies, investment trusts and/or investment limited partnerships, which the Investment Manager considers will give consistent returns to investors in line with the target returns of the Sub-Funds and which may include investment in other Sub-Funds of the ICAV (“Underlying Funds”).

# FAM Series UCITS ICAV

Notes to the Financial Statements for the financial year ended 31 December 2022 (continued)

## 2. Statement of Accounting Policies (continued)

### 2.1 Accounting Policies (continued)

#### (c) Derivative Instruments

The Sub-Funds may enter into derivatives instruments for the purposes of efficient portfolio management.

#### Forward currency contracts

When entering into a forward foreign currency exchange contract, the Sub-Fund agrees to receive or deliver a fixed quantity of foreign currency for an agreed price upon an agreed future date. These contracts are valued daily at the forward rate and the Sub-Fund's equity therein, representing unrealised gains or losses on the contracts, is included in the Statement of Comprehensive Income. The unrealised gain/(loss) on open forward currency contracts is calculated by reference to the difference between the contracted rate and the rate to close out the contract. Realised and movement in unrealised gains or losses are included in the Statement of Comprehensive Income.

#### Futures contracts

Futures contracts are valued at the last traded price on the Sub-Fund's valuation date or if no price at the valuation date, the recent last traded price. Any gain or loss in fair value is recorded as unrealised gains or losses in the Statement of Comprehensive Income. Upon settlement a realised gain or loss is recognised in the Statement of Comprehensive Income.

#### Interest rate swaps

Interest rate swaps involve the exchange by the Sub-Fund with another party for their respective commitment to pay or receive interest on the notional amount of principal. The changes in contract values are recorded as unrealised gains or losses and the Sub-Funds recognise a realised gain or loss when the contract is closed. Movement of unrealised gains and losses on interest rate swaps are recognised in the Statement of Comprehensive Income.

#### Total return swaps

A total return swap is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Realised and movement of unrealised gains and losses are recognised in the Statement of Comprehensive Income.

#### Rights and warrants

Rights and warrants are recorded as an asset or liability at their fair value on the Statement of Financial Position. Fair value as determined by the Administrator is the quoted market price as provided by electronic feed from one or more reputable price vendors. The change in fair value, if any, is recorded as an unrealised gain or loss in the Statement of Comprehensive Income. Realised gains or losses on warrants are shown in the Statement of Comprehensive Income. On the expiry of a warrant the amount previously recognised in the Statement of Financial Position is recognised in the Statement of Comprehensive Income as a realised gain or loss.

#### Option contracts

Option contracts give the right, but not the obligation, to buy or sell within a limited time, a specific financial instrument at a contracted price that may also be settled in cash, based on differentials between specified indices or prices. Options written create an obligation to buy or sell within a limited time, the specific financial instrument at a contracted price that may also be settled in cash, based on differentials between specified indices or prices.

There were open forward currency contracts, interest rate swaps, option contracts, futures contracts and rights and warrants at 31 December 2022, and these are disclosed on the relevant Schedule of Investments of each Sub-Fund.

# FAM Series UCITS ICAV

Notes to the Financial Statements for the financial year ended 31 December 2022 (continued)

## 2. Statement of Accounting Policies (continued)

### 2.1 Accounting Policies (continued)

#### (c) Derivative Instruments (continued)

##### Contracts for differences

Contracts for differences are over-the-counter derivatives which take advantage of economic benefits which are not afforded through investing directly in certain securities markets. The Sub-Fund may purchase an equity contract for differences as a means of gaining exposure to the economic performance and cash flows of an equity security without the need for taking or making physical delivery of the security. A contract for differences is a financial instrument linked to an underlying share price. Consequently, no rights are acquired or obligations incurred relating to the underlying share and the Sub-Fund may buy or sell depending on the Investment Manager's view of a ICAV's share price. Contracts for differences are highly leveraged instruments and for a small deposit it is possible for the Sub-Fund to hold a position much greater than would be possible with a traditional investment. These are valued daily based on quoted market prices at the Statement of Financial Position dates. The fair value of contracts for differences is the difference between the contracted price and the volume weighted average price of the financial instrument multiplied by the number of shares specified within the contract.

##### (d) Offsetting Financial Instruments

Financial assets and liabilities are offset and the net amount reported on the Statement of Financial Position when there is a legally enforceable right to offset the recognised amounts and there is an intention to settle on a net basis, or realise the assets and settle the liability simultaneously.

##### (e) Redeemable Participating Shares

The issued redeemable participating Shares ("Shares") is at all times equal to the net asset value of the ICAV. The Shares are redeemable at the shareholders option and are classified as financial liabilities. The Shares can be put back to the ICAV at any time for cash equal to a proportionate share of the ICAV's net asset value. The Shares are carried at the redemption amount that is payable at the Statement of Financial Position date if the holder exercises the right to put the share back to the ICAV. Each Sub-Fund's Net Asset Value ("NAV") per Share is calculated by dividing the NAV of that Sub-Fund, being the value of its assets less its liabilities by the numbers of shares of that Sub-Fund then in issue.

##### (f) Use of Judgements and Estimates

The preparation of Financial Statements in conformity with IFRS as adopted by the EU requires management to make judgements, estimates and assumptions that affect reported amounts of assets and liabilities and disclosure of contingent assets and liabilities as at the date of the Financial Statements. Estimates also affect the reported amounts of income and expenses for the reporting period in the Statement of Comprehensive Income. Actual results could differ from those estimates.

Estimates and underlying assumptions are reviewed on an ongoing basis. Revisions to accounting estimates are recognised in the year in which the estimates are revised and in any future accounting periods affected. Information about assumptions and estimation uncertainties that have a significant risk of resulting in a material adjustment within the next financial year, as well as critical judgments in applying accounting policies that have the most significant effect on the amounts recognised in the Financial Statements are included in Note 13 and 14.

## 2. Statement of Accounting Policies (continued)

### 2.1 Accounting Policies (continued)

#### (g) Foreign Exchange

Items included in the ICAV's Financial Statements are measured using the currency of the primary economic environment in which it operates (the "functional currency"). The functional currency for this ICAV is Euro ("EUR" or "€") and each Sub-Fund's base currency is disclosed below:

<b>Sub-Fund</b>	<b>Base currency</b>
Fidelity Euro Bond FAM Fund	EUR
Fidelity Euro Short Term Bond FAM Fund	EUR
Fidelity Global Dividend FAM Fund	USD
Fidelity World FAM Fund	USD

Notes to the Financial Statements for the financial year ended 31 December 2022 (continued)

## 2. Statement of Accounting Policies (continued)

### 2.1 Accounting Policies (continued)

#### (g) Foreign Exchange (continued)

<b>Sub-Fund</b>	<b>Base currency</b>
Global Disruptive Opportunities FAM Fund	EUR
Medtech FAM Fund	USD
Sustainable Future Connectivity FAM Fund	USD
Changing Lifestyles FAM Fund	USD
Morgan Stanley US Advantage FAM Fund	USD

The ICAV has adopted the functional currency of each Sub-Fund as the presentation currency for these Financial Statements. Assets and liabilities expressed in currencies other than the functional currency are converted into the functional currency using the exchange rates prevailing as at the Statement of Financial Position date. Transactions in foreign currencies are translated into the Sub-Fund's functional currency at the transaction dates. Gains and losses on foreign exchange transactions are recognised in the Statement of Comprehensive Income in determining the results for the financial year.

#### (h) Income

Interest income is recognised in the Statement of Comprehensive Income at the effective interest rate method.

Dividends are recognised in the Statement of Comprehensive Income on the dates on which the relevant securities are listed as "ex-dividend". Dividend income is shown gross of any non-recoverable withholding taxes, which is disclosed separately in the Statement of Comprehensive Income, and net of any tax credits.

#### (i) Expenses

All expenses are recognised in the Statement of Comprehensive Income on an accruals basis.

#### (j) Cash and Cash Equivalents

Cash comprises cash at banks and bank overdrafts. Cash equivalents are short term (up to three months), highly liquid investments, that are readily convertible to known amounts of cash and which are subject to insignificant changes in value. For the financial year ended 31 December 2022, cash equivalents held by the ICAV includes, commercial papers and treasury bills. They are held for the purpose of meeting short-term cash commitments rather than for investments or other purposes. The carrying amount of these assets is approximately equal to their fair value.

#### (k) Payable for Securities Purchased/Receivable for Securities Sold

Payable for securities purchased and receivable for securities sold include trades pending settlement.

#### (l) Redemptions Payable

Redemptions are recognized as liabilities when the amount requested by the unitholder in the irrevocable redemption notice becomes fixed.

#### (m) Subscriptions Receivable

Subscription receivable includes the amounts still to be collected from investor before the ICAV will issue the shares.

#### (n) Due from/to Brokers

Due from/to brokers represent margin accounts and cash collateral for borrowed securities. Margin accounts represent cash deposits with brokers, transferred as collateral against open derivative contracts.

Notes to the Financial Statements for the financial year ended 31 December 2022 (continued)

## 2. Statement of Accounting Policies (continued)

### 2.1 Accounting Policies (continued)

#### (o) Organisational Costs

Costs incurred in organising the ICAV were amortised over the first five accounting periods of the ICAV as disclosed in the prospectus. This is not in accordance with IFRS but Management assessed the costs to be immaterial to the ICAV and refer to Note 4 for details.

#### (p) Management fee rebate

The ICAV has rebate agreements with certain investment managers of the Underlying Funds. These rebates are recorded on an accruals basis in the Statement of Comprehensive income.

#### (q) Securities lending income

Securities lending income is earned from lending securities owned by the Sub-Fund to third party borrowers. Securities lending income is recognised in the Statement of Comprehensive Income on an accruals basis.

#### (r) Anti-Dilution Levy

The Directors reserve the right to impose “an anti-dilution levy” representing a provision for market spreads (the difference between the prices at which assets are valued and/or bought or sold), duties and charges and other dealing costs relating to the acquisition or disposal of assets and to preserve the value of the underlying assets of a Sub-Fund, in the event of receipt for processing of net subscriptions or net redemptions exceeding such percentage of the NAV of the Sub-Funds as determined by the Directors from time to time (including subscriptions and/or redemptions which would be effected as a result of requests for conversion from one Class into another Class). Any such provision will be deducted from the subscription proceeds in the case of net subscription requests exceeding the threshold of a Sub-Fund and deducted from the redemption proceeds in the case of net redemption requests exceeding the threshold of a Sub-Fund including the price of shares issued or redeemed as a result of requests for conversion. Any such sum will be paid into the account of the relevant Sub-Fund.

The ICAV started applying the policy on 1 January 2021. The table below shows the Anti-Dilution Levy amounts per Sub-Fund included in the Other income balance in the Statement of Comprehensive Income for the year ended 31 December 2022 and 2021.

## Notes to the Financial Statements for the financial year ended 31 December 2022 (continued)

### 7. Share Capital

The actual value of paid up share capital of the ICAV shall at all times equal to the NAV of the ICAV after deduction of liabilities. The share capital of the ICAV shall be divided into share capital of 5,000,000,000,000 Shares of no par value and 2 Subscriber Shares of €1.00 each and shall at all times be equal to the value for the time being of the issued share capital of the ICAV.

Each of the Shares (with the exception of the Subscriber Shares) entitles the Shareholder to participate equally on a pro rata basis in the dividends and net assets of the relevant Sub-Fund attributable to the relevant class in respect of which they are issued save in the case of dividends declared prior to becoming a Shareholder.

The proceeds from the issue of Shares shall be applied in the books of the ICAV to the relevant Sub-Fund and shall be used on behalf of such Sub-Fund for the acquisition of assets in which a Fund may invest. The records and accounts of each Sub-Fund shall be maintained separately.

The Directors reserve the right to re-designate any class of Shares from time to time, provided that Shareholders in that class shall first have been notified by the ICAV that the Shares will be re-designated and shall have been given the opportunity to have their Shares redeemed by the ICAV, except that this requirement shall not apply where the Directors re-designate Shares in issue in order to facilitate the creation of an additional class.

Each of the Shares entitles the holder to attend and vote at meetings of the ICAV and of the relevant Sub-Fund represented by those Shares. No class of Shares confers on the holder there of any preferential or pre-emptive rights or any rights to participate in the profits and dividends of any other class of Shares or any voting rights in relation to matters relating solely to any other class of Shares.

Any resolution to alter the class rights of the Shares requires the approval of three quarters of the holders of the Shares of the relevant class represented or present and voting at a general meeting duly convened in accordance with the Instrument.

The Instrument of the ICAV empowers the Directors to issue fractional shares in the ICAV. Fractional shares will be issued where any part of the subscription monies for Shares represents less than the subscription price for one Share, provided however, that fractions shall not be less than 0.01 of a Share and shall not carry any voting rights at general meetings of the ICAV or a Sub-Fund and the NAV of any fractional share shall be the NAV per Share adjusted in proportion to the fraction.

The movement in the number of Shares is as follows for the financial year ended 31 December 2022:

## Notes to the Financial Statements for the financial year ended 31 December 2022 (continued)

### 9. Directors' Fees

The Directors are entitled to a fee by way of remuneration for their services at a rate to be determined from time to time by the Directors. The aggregate amount of Directors' remuneration in any one year shall not exceed €30,000 (excluding Value Added Tax, ("VAT"), if any).

All Directors will be entitled to reimbursement by the ICAV of expenses properly incurred in connection with the business of the ICAV or the discharge of their duties. Fees related to the ICAV are charged to the trading Sub-Funds. Mr. Jim Finn is the only Director of the ICAV in receipt of a director's fee. All other Directors of the ICAV have each waived their entitlement to receive a director's fee.

The directors' fees charged for the year amounted to €18,038 (31 December 2021: €24,538). The directors fees payable as at 31 December 2022 was €32,029 (31 December 2021: €46,749).

### 10. Administration Fees and Depositary Fees

The Manager and the Administrator entered into a new administration agreement which is applicable for a three year period. The annual fee, payable out of the assets of the relevant Sub-Fund, is at a rate of 0.05% (plus VAT, if any) and is a combined fee which includes both the Administrator and the fee of the Depositary. The fee is presented on the Statement of Comprehensive Income as Administration fees and Depositary fees.

The Administrator is also entitled to be reimbursed for all agreed registration and transaction fees and out of pocket expenses (plus VAT thereon, if any) properly incurred by it in the performance of its duties and responsibilities under the Administration Agreement.

## 11. Auditors Remuneration

The remuneration to the statutory audit firm in respect of the services rendered to the ICAV for the financial year is as follows:

	<b>2022</b>	<b>2021</b>
	<b>EUR</b>	<b>EUR</b>
Audit fee*	249,651	288,182

\* Audit fee amount shown is excluding VAT of 23%. There were no other fees paid to the statutory audit firm for tax or other assurance or non-audit work during the year.

## 12. Related and Connected Persons Transactions

Parties are considered to be related if one party has the ability to control the other party or exercise significant influence over the other party in making financial or operational decisions.

The Directors of the ICAV are considered related parties. Details of Directors' fees charged during the year are disclosed in Note 9.

Mr. Fabio Melisso and Mr. Jim Firn (Independent director) are directors of the Manager and Mr. Ciaran Brady and Lorenzo Di Pietrantonio are employees of the Manager and will be considered to be interested in any agreement entered into by the ICAV with the Manager.

Sub-Funds of Core Series and FAM Evolution ICAV, which are also managed by the Manager, have made investments in the ICAV during the year. There were no other agreements entered into by the ICAV with either Core Series or FAM Evolution ICAV during the year. BNP Paribas Securities Services is also the securities lending agent.

### 12. Related and Connected Persons Transactions (continued)

#### Management Fee

The Manager is entitled to receive out of the assets of the ICAV a management fee in respect of each class, accrued daily and payable monthly in arrears at such annual percentage rate of the NAV of each class as set out in the relevant Sub-Fund supplement. Any out of pocket expenses incurred by the Manager in carrying out its role on behalf of the ICAV and its Sub-Funds shall be for its own account. These disclosed fees are the maximum charges capped as per the prospectus and actual fees charged may be lower. As per the prospectus the management fee rate can change during the year.

Notes to the Financial Statements for the financial year ended 31 December 2022 (continued)

## 12. Related and Connected Persons Transactions (continued)

### Management Fee (continued)

#### Receivables from the Manager

Fineco Asset Management Designated Activity Company, in its role as the Manager of the ICAV, have decided to cover certain expenses for Morgan Stanley US Advantage FAM Fund USD17,061.

There are no other receivables from the Manager for the year ended 31 December 2022 and 31 December 2021.

## 13. Financial Instruments and Associated risks

Each Sub-Fund's investment activities expose them to the various types of risk which are associated with the financial instruments and markets in which it invests. The following information is not intended to be a comprehensive summary of all risks and investors should refer to the prospectus for a more detailed discussion of the risks inherent in investing in each Sub-Fund. The Sub-Funds' have exposure to the following risks from financial instruments:

- a) Market risk;
- b) Liquidity risk;
- c) Credit risk;
- d) Operational risk.

### Risk Management framework

The Directors review quarterly risk and investment performance reports and presentations from the Manager, or where applicable the Manager's delegate Investment Managers (together "the Manager" only for the purpose of Note 13), covering the Sub-Funds' performance and risk profile during the financial year.

The Manager is responsible for ensuring that each Sub-Fund is managed within the terms of their investment guidelines and limits set out in the prospectus. The Directors review the Manager's reporting on the investment performance, product risk monitoring and oversight activities and the monitoring and oversight of regulatory and operational risk for the Sub-Funds.

The Manager has been given discretionary authority to manage the assets in line with the investment objectives of each Sub-Fund. Compliance with the target asset allocations and the composition of the portfolio are monitored by the Directors on a quarterly basis. In instances where the portfolio has diverged from target asset allocations, the Manager is obliged to take actions to rebalance the portfolio in line with the established targets, within prescribed time limits.

#### (a) Market risk

Market risk arises mainly from uncertainty about future values of financial instruments influenced by price, interest rate and currency movements. It represents the potential loss each Sub-Fund may suffer through holding market positions in the face of market movements. The Manager's strategy for the management of market risk is driven by the Sub-Funds' investment objective as set out in Note 1. The ICAV's market risk is managed on a daily basis by the Manager. The Manager moderates this risk through a careful selection of securities and other financial instruments within specified limits. Details of the nature of the ICAV's investment portfolio at the Statement of Financial Position date are disclosed in the Schedule of Investments.

#### Value at Risk

The Manager uses three approaches to measure the Sub-Funds' global risk exposures. These are the commitment approach, Absolute Value at Risk ("VaR") and Relative VaR. These approaches are described in the prospectus and the approach each Sub-Fund uses is outlined in the table below.

## Notes to the Financial Statements for the financial year ended 31 December 2022 (continued)

### 13. Financial Instruments and Associated risks (continued)

#### (a) Market risk (continued)

##### Value at Risk (continued)

sing the absolute VaR, the Manager estimates the potential loss in the Sub-Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Sub-Funds shall be calculated daily and shall not exceed 13-20% per cent of the NAV of the Sub Fund, based on a 1 month holding period and a "one-tailed" 99 per cent confidence interval using a historical observation period of at least 1 year.

Using the relative VaR, the Manager estimates the potential loss in the Sub-Fund's portfolio over a set period at a certain confidence level, and based on statistical analysis of historical price trends and volatilities. The VaR of the Sub-Fund's portfolio is measured relative to the benchmark index which the Manager consider a comparable benchmark to the Sub-Fund's portfolio. In compliance with the UCITS Regulations, the relative VaR of the Sub Fund's portfolio shall not exceed twice the VaR of the index, as determined daily using a one-tailed confidence interval of 99%, a holding period of one month and a historical observation period of at least 1 year.

The 1 day VaR as of 31 December 2022 and 31 December 2021 based on a 99% confidence level is outlined in the table below:

<b>Absolute VaR</b>	<b>31 December 2022</b>	<b>31 December 2021</b>

# FAM Series UCITS ICAV

Notes to the Financial Statements for the financial year ended 31 December 2022 (continued)

## 13. Financial Instruments and Associated risks (continued)

### (a) Market risk (continued)

#### Value at Risk (continued)

Some limitations of VaR analysis are:

- The models are based on historical data and cannot take account of the fact that future market price movements, correlations between markets and levels of market liquidity in conditions of market stress may bear no relation to historical patterns. As a consequence, VaR can be highly variable and a single date point analysis can be of limited value. VaR can fluctuate significantly over time;
- The composition of the ICAV can change significantly over a short period of time and, as such, the ICAV's risk profile including VaR may also change materially over a short time frame;
- The market price risk information is a relative estimate of risk rather than a precise and accurate number;
- The market price information represents a hypothetical outcome and is not intended to be predictive (in the case of probability-based methods, such as VaR, profits and losses are almost certain to exceed the reported amount with a frequency depending on the confidence interval chosen);
- FX hedging for the benefit of a particular class are not included;
- Future market conditions could vary significantly from those experienced in the past.

### (i) Price risk

Price risk is the risk that the value of an instrument will fluctuate as a result of changes in market prices, whether caused by factors specific to an individual investment, its issuer or all factors affecting all instruments traded in the market.

Any increase or decrease in the market price of investments would alter the ICAV's net asset value to the extent that it was invested at the time. The ICAV's investment portfolio complies with the investment restrictions as disclosed in its prospectus.

#### Exposure to price risk

The tables below summarises the overall market exposure of financial assets and liabilities at FVTPL as at 31 December 2022 and 31 December 2021:

##### Sensitivity

Sensitivity analysis for the Sub-Funds where the Manager do not use VAR approach is disclosed below.

Any increase or decrease in the market price of investments would alter the Sub-Fund's net asset value to the extent that it was invested at the time. The Sub-Fund's investment portfolio complies with the investment restrictions as disclosed in its prospectus. As at 31 December 2022 and 31 December 2021, if the fair value of investments to which the Sub-Funds were exposed had changed by 5% with all other variables held constant, this would have resulted in a change of net assets attributable to the shareholders by the amounts detailed below:

Sub-Fund		2022	2021
Fidelity Euro Bond FAM Fund	EUR	15,786,881	19,480,111
Fidelity Euro Short Term Bond FAM Fund	EUR	20,078,798	28,103,196

##### Management of price risk

The Manager chooses assets for investment and divestment by considering the potential contribution to portfolio volatility from the price risk of the asset considered in the transaction and in reference to the ICAV risk framework and the ICAV's prospectus, supplement and marketing materials. The Manager monitors that the exposures are within any tolerances set out in the agreed ICAV risk framework.

# FAM Series UCITS ICAV

## Notes to the Financial Statements for the financial year ended 31 December 2022 (continued)

### 13. Financial Instruments and Associated risks (continued)

#### (a) Market risk (continued)

##### (ii) Interest rate risk

The ICAV's financial assets include direct interest bearing instruments. As a result the ICAV is exposed to fair value interest rate risk due to fluctuations in the prevailing levels of market interest rates. The ICAV's interest rate risk is managed on a daily basis by the Manager.

Cash and cash equivalents are not considered to be significantly exposed to fair value interest rate risk due to the short term nature of the instruments. Cash earns interest at a variable interest rate.

The interest bearing financial instruments significantly exposed to fair value interest rate risk are the bond investments. Consequently, movements in interest rates would have an inverse effect on the movement of the net asset value of the Sub-Funds.

The Manager chooses assets for investment and divestment by considering the potential contribution to portfolio volatility from the interest rate risk of the asset considered in the transaction and in reference to the ICAV risk framework and the ICAV's prospectus, supplement and marketing materials. The Risk Management department monitors that the exposures are within any tolerances set out in the agreed ICAV risk framework.

The following Sub-Funds held interest bearing instruments. Sensitivity is not presented here for the following Sub-Funds as VaR is presented for this Sub-Fund on Page 927 to 931.

- Amundi Emerging Markets Bond FAM Fund
- Amundi Strategic Bond FAM Fund
- Amundi European Equity Value FAM Fund
- Emerging Markets Bond Hard Currency FAM Fund
- Euro Bond FAM Fund
- Euro Corporate Fixed Income FAM Fund
- Euro Short Duration Bond FAM Fund

Notes to the Financial Statements for the financial year ended 31 December 2022 (continued)

## 13. Financial Instruments and Associated risks (continued)

### (a) Market risk (continued)

#### (iii) Currency risk

Foreign currency risk is the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in foreign exchange rates.

Each Sub-Fund may invest in securities denominated in currencies other than their functional currency. Consequently, each Sub-Fund is exposed to risks that the exchange rate of their functional currency relative to other currencies may change in a manner which has an adverse effect on the value of the portion of each Sub-Fund's assets which are denominated in currencies other than their own currency.

The currency risk is in relation to the notional exposure on the forward currency contracts held by the Sub-Funds. These are detailed on the Schedule of Investments.

The Manager chooses assets for investment and divestment by considering the potential contribution to portfolio volatility from the currency risk of the asset considered in the transaction and in reference to the fund risk framework and the fund's prospectus, supplement and marketing materials. The Risk Management department monitors that the exposures are within any tolerances set out in the agreed fund risk framework.

Sensitivity is not presented for the following Sub-Funds as VaR is presented for this Sub-Fund in the notes to the Financial Statements:

- Amundi Emerging Markets Bond FAM Fund
- Amundi Strategic Bond FAM Fund
- Amundi European Equity Value FAM Fund
- Emerging Markets Bond Hard Currency FAM Fund
- Euro Bond FAM Fund
- Euro Corporate Fixed Income FAM Fund
- Euro Short Duration Bond FAM Fund
- Fineco AM European Corporate Bond Fund
- M&G Optimal Income FAM Fund
- Schroder Euro Bond FAM Fund
- Fineco AM Euro Corp Bonds Fund
- Fineco AM Investment Grade Euro Aggregate Bond Fund
- Fineco AM Euro Corporate Bond Fund
- Invesco Global Total Return Bond FAM Fund
- Nordea Stable Performance FAM Fund
- Emerging Markets Debt FAM Fund
- Vontobel Emerging Markets Debt FAM Fund
- Jupiter Flexible Income FAM Fund
- Infusive Consumer Alpha Global Leaders FAM Fund

## Notes to the Financial Statements for the financial year ended 31 December 2022 (continued)

### 13. Financial Instruments and Associated risks (continued)

#### (b) Liquidity risk

Liquidity risk is the risk that the Sub-Funds' may not be able to generate sufficient cash resources to settle their obligations in full as they fall due or can do so only on terms that are materially disadvantageous.

Each Sub-Fund's principal liquidity risks arise from the ability of investors to effect redemption requests and the liquidity of the underlying investments each Fund has invested in.

Each Sub-Fund's Unitholders may redeem their units on the close of any daily dealing deadline for cash equal to a proportionate share of each Sub-Fund's NAV, excluding any duties and charges where applicable. Each Sub-Fund is therefore potentially exposed to the liquidity risk of meeting the unitholders' redemptions and may need to sell assets at prevailing market prices to meet liquidity demands.

The Manager chooses assets for investment and divestment by considering the potential contribution to portfolio liquidity from the liquidity risk of the asset considered in the transaction and in reference to the fund risk framework and the fund's prospectus, supplement and marketing materials. The Risk Management department monitors that the exposures are within any tolerances set out in the agreed fund risk framework. The ICAV's overall liquidity risks are monitored on a quarterly basis by the Board of Directors.

All of the Sub-Funds assets and liabilities as of 31 December 2022 can be received or paid within or less than 1 month. While the accrued expenses can be paid within or less than 1 month not all are and some can be paid at a later date due to frequency or delay of invoicing. This delay can at times exceed 1 year.

## Notes to the Financial Statements for the financial year ended 31 December 2022 (continued)

### 13. Financial Instruments and Associated risks (continued)

#### (c) Credit risk

Credit risk is the risk that a counterparty to a financial instrument will fail to discharge an obligation or commitment that it has entered into with the ICAV. The carrying amount of financial assets as per the Statement of Financial Position on pages 77 to 106 best represents the maximum credit risk exposure as at its date. Credit risk on transactions with brokers relates to transactions awaiting settlement. Risk relating to unsettled transactions is considered small due to the short settlement period involved and the high credit quality of the broker used. Substantially all of the assets of the ICAV are held by the Depositary. Bankruptcy or insolvency of the Depositary may cause the ICAV's rights with respect to securities or cash held by the Depositary to be delayed or limited. The ICAV manages its risk by monitoring the credit quality and financial position of the Depositary the ICAV uses. The credit rating for the Depositary as at 31 December 2022 was A+ (31 December 2021: A+) published by Standard & Poor's.

The cash and cash equivalents, balances due from brokers and balances due to brokers are held with bank and financial institution counterparties, which are rated BBB+ to AA (31 December 2021: BBB+ to AA), based on Standard & Poor's ratings. The derivatives are entered into with bank and financial institution counterparties, which are rated BBB+ to AA (31 December 2021: BB+ to AA), based on Standard & Poor's ratings.

The Manager manages issuer risk through building diversified portfolios to limit exposure to any one issuer in accordance with the ICAV's investment objectives. The ICAV employs well known counterparties and ensures that concentration of investment in any one stock or counterparty is monitored against set limits.

Additionally, if required, the Manager will limit ownership of debt instruments to those instruments carrying a credit rating equal to or in excess of that provided for in the ICAV's investment objectives. The Manager monitors compliance with these restrictions on a daily basis.

All transactions in listed securities are settled/paid upon delivery using approved brokers. The risk of default is considered minimal as delivery of securities sold is only made once the broker has received payment. Payment is made on a purchase once the securities have been received by the broker. The credit ratings of all derivative counterparties are monitored regularly. The risk managers review counterparty credit ratings and approve the use of such counterparties.

## 13. Financial Instruments and Associated risks (continued)

### (c) Credit risk (continued)

#### Offsetting and amounts subject to master netting arrangements

The ICAV has not offset any financial assets and financial liabilities in the statement of financial position. The disclosures set out in the tables below include financial assets and financial liabilities that are subject to an enforceable master netting or derivative clearing agreement that covers derivatives.

The International Swaps and Derivatives Association (“ISDA”) and similar master netting agreements do not meet the criteria for offsetting in the statement of financial position. This is because the ICAV does not have any currently legally enforceable right to offset recognised amounts, because the right to offset is enforceable only on the occurrence of future events such as a default of the ICAV or the counterparties or other credit events.

The collateral provided in respect of the above transactions is subject to the standard industry terms of ISDA’s Credit Support Annex. This means that securities received/given as collateral can be pledged or sold during the term of the transaction but have to be returned on maturity of the transaction. The terms also give each counterparty the right to terminate the related transactions on the counterparty’s failure to post collateral.

The following tables disclose the derivative financial assets and liabilities subject to enforceable netting and similar arrangements, presented on an aggregate basis across multiple counterparties. Counterparties are analysed on an individual basis, offsetting assets and liabilities with individual counterparties where appropriate to do so while incorporating the collateral held by or posted by the Sub-Funds with respect to the open positions. The following tables present the total net exposure to counterparties with respect to derivative assets and liabilities on a Sub-Fund by Sub-Fund basis.

#### Fidelity Euro Bond FAM Fund

Financial assets subject to offsetting, enforceable master netting arrangements and similar agreements:

Description	Gross amounts of recognised financial assets	Gross amounts of recognised financial liabilities set-off in the statement of financial position	Net amounts of financial assets presented in the statement of financial position	Related amounts not set-off in the statement of financial position		Net amount
	EUR	EUR	EUR	Financial instruments	Cash collateral received	
<b>31 December 2022:</b>						
Derivative financial assets	2,923,912	-	2,923,912	(1,895,873)	-	1,028,039

## 13. Financial Instruments and Associated risks (continued)

### (c) Credit risk (continued)

Each Sub-Fund's engagement in securities lending activities expose the Sub-Fund to counterparty credit risk. The maximum exposure of each Fund is equal to the value of the securities loaned.

All securities lending transactions entered into by each Sub-Fund are subject to a written legal agreement between each Sub-Fund and the Manager and separately between the approved borrowing counterparty. Collateral received in exchange for securities lent is transferred under a title transfer arrangement and is delivered to and held in an account with a tri-party collateral manager in the name of the Trustee on behalf of each Sub-Fund. Collateral received is segregated from the assets belonging to each Sub-Fund's Trustee or the securities lending agent.

The collateral is registered and held in the name of Trustee on behalf of each Sub-Fund with the Depository depending on the type of collateral the counterparty has to give in order to cover the required value of exposure. The collateral provided by these counterparties consists of shares admitted to dealing on a regulated market.

The Sub-Funds outlined below engaged in securities lending activities during the financial year. The value of securities on loan and collateral held at the financial year end are shown below:

Sub-Fund	Currency	Value of securities on loan as at 31/12/2022	Value of Collateral received as at 31/12/2022
Fidelity Euro Bond FAM Fund	EUR	70,888,818	74,422,157
Fidelity Euro Short Term Bond FAM Fund	EUR	26,756,940	28,669,826
Fidelity World FAM Fund	EUR	8,289,669	8,582,192
M&G Optimal Income FAM Fund	EUR	117,864,650	120,667,476

Notes to the Financial Statements for the financial year ended 31 December 2022 (continued)

## 13. Financial Instruments and Associated risks (continued)

### (c) Credit risk (continued)

Sub-Fund	Currency	Value of securities on loan as at 31/12/2022	Value of Collateral received as at 31/12/2022
Fineco AM Global Equities Income Fund	EUR	7,548,737	7,947,384
Euro High Yield Bond FAM Fund	EUR	11,541,632	11,848,055
Invesco Global Total Return Bond FAM Fund	EUR	51,531,958	54,252,677
Nordea Stable Performance FAM Fund	EUR	9,494,511	12,026,847
Emerging Markets Debt FAM Fund	EUR	2 856 769.61	3 222 245.48
Jupiter Flexible Income FAM Fund	EUR	2 873 651.88	3 224 723.18
European High Yield Bond FAM Fund	EUR	3 305 274.23	3 574 498.72
Vontobel Emerging Markets Debt FAM Fund	EUR	3 682 933.88	5 290 387.77

Please note that the following sub-funds are also set up in our lending programme but they did not record any loan balance as at 31 December 2022:

Sub-Fund	
Euro Corporate Bond FAM Fund	FAM Global Premium Equities Fund
Euro Corporate Fixed Income FAM Fund	Fidelity Global Dividend FAM Fund
Euro Credit Bond FAM Fund	M&G North American Value FAM Fund
Euro Short Duration Bond FAM Fund	US Equity Value FAM Fund
European Corporate Bond FAM Fund	

To mitigate this risk, each Sub-Fund receives either cash or securities as collateral equal to a certain percentage in excess of the fair value of the securities loaned. The Investment Manager monitors the fair value of the securities loaned and additional collateral is obtained, if necessary.

As at 31 December 2022 all collateral received consists of securities admitted to or dealt on a regulated market.

Each Sub-Fund also benefits from a borrower default indemnity provided by the Manager. The indemnity allows for full replacement of securities lent. The Manager bears the cost of indemnification against borrower default.

### (d) Operational risk

Operational risk is the risk of direct or indirect loss arising from a wide variety of causes associated with the processes, technology and infrastructure supporting the Sub-Fund activities with financial instruments, either internally within the Sub-Fund or externally at the Sub-Fund's service providers, and from external factors other than credit, market and liquidity risks such as those arising from legal and regulatory requirements and generally accepted standards of investment management behaviour.

The Sub-Funds' objectives are to manage operational risk so as to balance the limiting of financial losses and damage to its reputation with achieving its investment objective of generating returns to investors.

Notes to the Financial Statements for the financial year ended 31 December 2022 (continued)

## 13. Financial Instruments and Associated risks (continued)

### (c) Credit risk (continued)

#### Operational risk (continued)

The primary responsibility for the development and implementation of controls over operational risk rests with the Directors. This responsibility is supported by the development of overall standards for the management of operational risk, which encompasses the controls and processes at the service providers and the establishment of service levels with the service providers, in the following areas:

- Documentation of controls and procedures;
- Requirements for:
  - Appropriate segregation of duties between various functions, roles and responsibilities;
  - Reconciliation and monitoring of transactions; and
  - Periodic assessment of operational risk faced.
- The adequacy of controls and procedures to address the risks identified;
- Compliance with regulatory and other legal requirements;
- Development of contingency plans;
- Training and professional development;
- Ethical and business standards; and
- Risk mitigation, including insurance if this is effective.

The Directors' assessment of the adequacy of the controls and processes in place at the service providers with respect to operational risk is carried out via regular discussions with the service providers and a review of the service providers' Service Organisation Controls reports on internal controls, if any are available.

## 14. Fair Value of Financial Instruments

Each Sub-Fund classifies financial instruments measured at fair value using a fair value hierarchy. The fair value hierarchy has the following categories:

- Level 1: The unadjusted quoted price in an active market for identical assets or liabilities that the entity can access at the measurement date;
- Level 2: Inputs other than quoted prices included within Level 1 that are observable (i.e. developed using market data) for the asset or liability, either directly or indirectly. This category includes instruments valued using: quoted prices in active markets for similar instruments; quoted prices for similar instruments in markets that are considered less than active; or other valuation techniques where all significant inputs are directly or indirectly observable from market data; and
- Level 3: Inputs are unobservable (i.e. for which market data is unavailable) for the asset or liability. This category includes all instruments where the valuation techniques used include inputs not based on market data and these inputs could have a significant impact on the instrument's valuation. This category also includes instruments that are valued based on quoted prices for similar instruments where significant entity determined adjustments or assumptions are required to reflect differences between the instruments and instruments for which there is no active market.

For this purpose, the significance of an input is assessed against the fair value measurement in its entirety.

The determination of what constitutes 'observable' requires significant judgement. The Directors consider observable data to be that market data that is readily available, regularly distributed or updated, reliable, verifiable, not proprietary, and provided by independent sources that are actively involved in the relevant market.

## Notes to the Financial Statements for the financial year ended 31 December 2022 (continued)

### 15. Exchange Rates (continued)

The following exchange rates against the CNH were used at the financial year end to translate foreign currency denominated assets and liabilities:

	31 December 2022	31 December 2021
CHF	0.13349	0.14374
EUR	0.13537	0.13867
HKD	1.12812	1.22652
USD	0.14471	0.15727

### 16. Efficient Portfolio Management

The ICAV may employ investment techniques and instruments for efficient portfolio management of the assets of the ICAV and, in particular, the ICAV may, for the purpose of hedging (whether against currency, exchange or interest rate risks or otherwise), or for direct investment purposes, purchase or sell put options and call options, spot contracts, forward contracts, futures contracts and other derivative instruments and may also enter into sale and repurchase agreement.

Subject to the conditions and within the limits otherwise stated in the investment objective and policies of the ICAV, the Manager may employ investment techniques and instruments such as futures, options, forward foreign currency contracts and other derivatives for investment purposes, hedging or efficient portfolio management.

### 17. Cross Liability

Liabilities incurred by a Sub-Fund of the ICAV may be discharged solely out of the assets of that Sub-Fund such that creditors of Sub-Funds will not have recourse to the assets of the other Sub-Funds of the ICAV to settle any liabilities incurred.

### 18. Taxation

Under current law and practice, the ICAV qualifies as an investment undertaking as defined in Section 739B of the Taxes Consolidation Act, 1997, as amended. It is not chargeable to Irish tax on its income or capital gains. However, the ICAV is obliged to apply a withholding tax on any distribution payments to Irish residents or ordinarily resident shareholders on any encashment, redemption or transfer of units by an Irish resident or ordinarily resident shareholder, unless the shareholder is exempted under Section 739D of the Taxes Consolidation Act, 1997, as amended. Shareholders who complete a declaration confirming that they are not Irish residents are not liable to Irish tax on the income or gains arising from their investment in the ICAV and no withholding tax will be deducted on any payments made to them. Where the ICAV has a concession from the Revenue Commissioners it may be possible to obtain an exemption from the requirement to have a valid non-resident declaration in place.

If the ICAV fails to deduct the tax or fails to collect the appropriate signed declaration from any non-resident or exempted shareholders, the ICAV will remain liable for the tax. In these circumstances, the ICAV would seek to recover the tax paid from the relevant shareholder.

Capital gains and interest received by the ICAV may be subject to withholding taxes imposed by the country of origin and such taxes may not be recoverable by the ICAV or its shareholders.

Fineco AM Global Equity Fund	FAM Global Equity Fund	25 November 2022
Fineco AM Global Equities Income Fund	FAM Global Equities Income Fund	25 November 2022

\* These Financial Statements exclude the Funds marked above which are presented in a separate sets of Financial Statements, refer to Note 1.

Effective 9 February 2022, the Manager appointed M&G Investment Management Limited to act as Investment Manager to Emerging Markets Debt FAM Fund, replacing Goldman Sachs Asset Management International.

### Covid 19

The impact of the coronavirus outbreak was profound across all aspects of society. In developed economies, it is clear that the worst of the impact is now over. However, there is an expectation that seasonal peaks and new variants could give rise to renewed travel restrictions, enhanced health screenings at ports of entry and elsewhere, disruption of and delays in healthcare service preparation and delivery and supply chain disruptions which will create ongoing challenges. Widescale and comprehensive vaccination programmes have been put in place in many countries which have had a positive effect. Nevertheless, the impact of COVID-19 continues to adversely affect the economies of many nations across the globe and this in turn may continue to impact investments held by each Fund.

### Russia/Ukraine Conflict and sanctions

The outbreak of war in Ukraine and the related sanctions targeted against the Russian Federation has impacted the European and Global economies. The direct exposure to Ukraine, Russia or Belarus was and continues to be not material to the overall ICAV. However, the impact on the general economic situation may require in the future revisions of certain assumptions and estimates. The Directors are carefully monitoring the situation as well as its potential impacts on the ICAV. The ICAV is fully capable of continuing its usual operations.

There were no other significant events during the financial year.

### 20. Events post financial year end

Effective 13 February 2023, the Manager appointed M&G Investment Management Limited to act as Investment Manager to the Jupiter Flexible Income FAM Fund, replacing Jupiter Asset Management Limited, and the Sub-Fund was also re-named as Flexible Income FAM Fund on this date.

Effective 1 January 2023, the Manager appointed Allianz Global Investors GmbH as investment advisor of Fineco AM Euro Credit Bond Fund, replacing HSBC Global Asset Management (France).

There are no other events after the period end that had a material effect on the Financial Statements.

# FAM Series UCITS ICAV

## Notes to the Financial Statements for the financial year ended 31 December 2022 (continued)

### 21. Soft commission arrangements

The Manager or the relevant Investment Managers of the Sub-Funds may effect transactions that will from time to time provide or procure the Manager or the Investment Managers goods and services and other benefits such as research and advisory services provided that the nature of which is such that their provision shall assist in the provision of investment services to the ICAV as a whole and which no direct payment is made but instead the Manager undertakes to place business with that party. In any event it is agreed that the execution of transactions will be on the basis of best execution standards and brokerage rates will not be in excess of customary institutional rates. Each Investment Manager shall also comply with additional regulations governing soft commission practices including where relevant requirements under MiFID II, which governs the extent to which commissions, inducements, research reports or other non-minor monetary benefits may be paid or received from brokers.

For the year ended 31 December 2022 and 2021, the following Investment Managers has entered into soft commission arrangements for research purposes as permitted by applicable regulation on behalf of the Sub-Funds with broker counterparties.

Investment Manager	Sub-Fund
Invesco Advisers, Inc	US Equity Value FAM Fund
Infusive Asset Management Inc.	Infusive Consumer Alpha Global Leaders FAM Fund

The total aggregate amount of soft commissions is USD237,959 for 31 December 2022.

There were no other soft commission arrangements for the financial year ended 31 December 2022.

### 22. Reconciliation to Published NAV

For certain Sub-Funds, there are differences between published NAV's, which are computed and published as per the time (the 'Valuation Point') outlined in the prospectus and supplements, management fees and the NAV's in the Financial Statements, which is calculated at close of business at 31 December 2022 for all Sub-Funds. The Financial Statements NAV's reflect these adjustments to the published NAV's as outlined below.

The Financial Statements have been adjusted for the followings Sub-Funds:

#### (i) Reconciliation of Net Asset Value

The following tables show the reconciliation between the NAV as per Financial Statements, Published NAV, and impact in basis points ("BPS"):

##### 31 December 2022

Sub-Fund	Published NAV	NAV per Financial Statements	Adjustment	Adjustment BPS
Fidelity Global Dividend FAM Fund	343,330,375	343,754,079	423,704	0.12%

In accordance with the UCITS Regulations the annual report documents material changes that have occurred in the disposition of the assets of the Sub-Funds during the year. A material change is defined as aggregate purchases of a security exceeding 1 per cent of the total value of purchases for the year or aggregate disposals greater than 1 per cent of the total value of sales. If there were fewer than 20 purchases that met the material changes definition, the Sub-Funds shall disclose those purchases and such number of the next largest purchases so that at least 20 purchases are disclosed. If there are fewer than 20 sales that met the material changes definition, the Sub-Funds shall disclose those sales and such number of the next largest sales so that at least 20 sales are disclosed.

In accordance with the UCITS Regulations the annual report documents material changes that have occurred in the disposition of the assets of the Sub-Funds during the year. A material change is defined as aggregate purchases of a security exceeding 1 per cent of the total value of purchases for the year or aggregate disposals greater than 1 per cent of the total value of sales. If there were fewer than 20 purchases that met the material changes definition, the Sub-Funds shall disclose those purchases and such number of the next largest purchases so that at least 20 purchases are disclosed. If there are fewer than 20 sales that met the material changes definition, the Sub-Funds shall disclose those sales and such number of the next largest sales so that at least 20 sales are disclosed.

In accordance with the UCITS Regulations the annual report documents material changes that have occurred in the disposition of the assets of the Sub-Funds during the year. A material change is defined as aggregate purchases of a security exceeding 1 per cent of the total value of purchases for the year or aggregate disposals greater than 1 per cent of the total value of sales. If there were fewer than 20 purchases that met the material changes definition, the Sub-Funds shall disclose those purchases and such number of the next largest purchases so that at least 20 purchases are disclosed. If there are fewer than 20 sales that met the material changes definition, the Sub-Funds shall disclose those sales and such number of the next largest sales so that at least 20 sales are disclosed.

In accordance with the UCITS Regulations the annual report documents material changes that have occurred in the disposition of the assets of the Sub-Funds during the year. A material change is defined as aggregate purchases of a security exceeding 1 per cent of the total value of purchases for the year or aggregate disposals greater than 1 per cent of the total value of sales. If there were fewer than 20 purchases that met the material changes definition, the Sub-Funds shall disclose those purchases and such number of the next largest purchases so that at least 20 purchases are disclosed. If there are fewer than 20 sales that met the material changes definition, the Sub-Funds shall disclose those sales and such number of the next largest sales so that at least 20 sales are disclosed.

In accordance with the UCITS Regulations the annual report documents material changes that have occurred in the disposition of the assets of the Sub-Funds during the year. A material change is defined as aggregate purchases of a security exceeding 1 per cent of the total value of purchases for the year or aggregate disposals greater than 1 per cent of the total value of sales. If there were fewer than 20 purchases that met the material changes definition, the Sub-Funds shall disclose those purchases and such number of the next largest purchases so that at least 20 purchases are disclosed. If there are fewer than 20 sales that met the material changes definition, the Sub-Funds shall disclose those sales and such number of the next largest sales so that at least 20 sales are disclosed.

In accordance with the UCITS Regulations the annual report documents material changes that have occurred in the disposition of the assets of the Sub-Funds during the year. A material change is defined as aggregate purchases of a security exceeding 1 per cent of the total value of purchases for the year or aggregate disposals greater than 1 per cent of the total value of sales. If there were fewer than 20 purchases that met the material changes definition, the Sub-Funds shall disclose those purchases and such number of the next largest purchases so that at least 20 purchases are disclosed. If there are fewer than 20 sales that met the material changes definition, the Sub-Funds shall disclose those sales and such number of the next largest sales so that at least 20 sales are disclosed.

In accordance with the UCITS Regulations the annual report documents material changes that have occurred in the disposition of the assets of the Sub-Funds during the year. A material change is defined as aggregate purchases of a security exceeding 1 per cent of the total value of purchases for the year or aggregate disposals greater than 1 per cent of the total value of sales. If there were fewer than 20 purchases that met the material changes definition, the Sub-Funds shall disclose those purchases and such number of the next largest purchases so that at least 20 purchases are disclosed. If there are fewer than 20 sales that met the material changes definition, the Sub-Funds shall disclose those sales and such number of the next largest sales so that at least 20 sales are disclosed.

In accordance with the UCITS Regulations the annual report documents material changes that have occurred in the disposition of the assets of the Sub-Funds during the year. A material change is defined as aggregate purchases of a security exceeding 1 per cent of the total value of purchases for the year or aggregate disposals greater than 1 per cent of the total value of sales. If there were fewer than 20 purchases that met the material changes definition, the Sub-Funds shall disclose those purchases and such number of the next largest purchases so that at least 20 purchases are disclosed. If there are fewer than 20 sales that met the material changes definition, the Sub-Funds shall disclose those sales and such number of the next largest sales so that at least 20 sales are disclosed.

In accordance with the UCITS Regulations the annual report documents material changes that have occurred in the disposition of the assets of the Sub-Funds during the year. A material change is defined as aggregate purchases of a security exceeding 1 per cent of the total value of purchases for the year or aggregate disposals greater than 1 per cent of the total value of sales. If there were fewer than 20 purchases that met the material changes definition, the Sub-Funds shall disclose those purchases and such number of the next largest purchases so that at least 20 purchases are disclosed. If there are fewer than 20 sales that met the material changes definition, the Sub-Funds shall disclose those sales and such number of the next largest sales so that at least 20 sales are disclosed.

In accordance with the UCITS Regulations the annual report documents material changes that have occurred in the disposition of the assets of the Sub-Funds during the year. A material change is defined as aggregate purchases of a security exceeding 1 per cent of the total value of purchases for the year or aggregate disposals greater than 1 per cent of the total value of sales. If there were fewer than 20 purchases that met the material changes definition, the Sub-Funds shall disclose those purchases and such number of the next largest purchases so that at least 20 purchases are disclosed. If there are fewer than 20 sales that met the material changes definition, the Sub-Funds shall disclose those sales and such number of the next largest sales so that at least 20 sales are disclosed.

In accordance with the UCITS Regulations the annual report documents material changes that have occurred in the disposition of the assets of the Sub-Funds during the year. A material change is defined as aggregate purchases of a security exceeding 1 per cent of the total value of purchases for the year or aggregate disposals greater than 1 per cent of the total value of sales. If there were fewer than 20 purchases that met the material changes definition, the Sub-Funds shall disclose those purchases and such number of the next largest purchases so that at least 20 purchases are disclosed. If there are fewer than 20 sales that met the material changes definition, the Sub-Funds shall disclose those sales and such number of the next largest sales so that at least 20 sales are disclosed.

In accordance with the UCITS Regulations the annual report documents material changes that have occurred in the disposition of the assets of the Sub-Funds during the year. A material change is defined as aggregate purchases of a security exceeding 1 per cent of the total value of purchases for the year or aggregate disposals greater than 1 per cent of the total value of sales. If there were fewer than 20 purchases that met the material changes definition, the Sub-Funds shall disclose those purchases and such number of the next largest purchases so that at least 20 purchases are disclosed. If there are fewer than 20 sales that met the material changes definition, the Sub-Funds shall disclose those sales and such number of the next largest sales so that at least 20 sales are disclosed.

In accordance with the UCITS Regulations the annual report documents material changes that have occurred in the disposition of the assets of the Sub-Funds during the year. A material change is defined as aggregate purchases of a security exceeding 1 per cent of the total value of purchases for the year or aggregate disposals greater than 1 per cent of the total value of sales. If there were fewer than 20 purchases that met the material changes definition, the Sub-Funds shall disclose those purchases and such number of the next largest purchases so that at least 20 purchases are disclosed. If there are fewer than 20 sales that met the material changes definition, the Sub-Funds shall disclose those sales and such number of the next largest sales so that at least 20 sales are disclosed.

In accordance with the UCITS Regulations the annual report documents material changes that have occurred in the disposition of the assets of the Sub-Funds during the year. A material change is defined as aggregate purchases of a security exceeding 1 per cent of the total value of purchases for the year or aggregate disposals greater than 1 per cent of the total value of sales. If there were fewer than 20 purchases that met the material changes definition, the Sub-Funds shall disclose those purchases and such number of the next largest purchases so that at least 20 purchases are disclosed. If there are fewer than 20 sales that met the material changes definition, the Sub-Funds shall disclose those sales and such number of the next largest sales so that at least 20 sales are disclosed.

### Value at Risk Approach

Value at Risk (“VaR”) is a statistical risk measure that estimates the potential loss from adverse market movements in an ordinary market environment.

Please refer to the financial risks note 13 to the Financial Statements for further details on the measure of VaR.

The Directors use Relative VaR to monitor and manage the global exposure of some of the Funds and Absolute VaR for others as set out below. For Relative VaR, the VaR of the respective Fund’s portfolio will not exceed twice the VaR of the reference portfolio. For Absolute VaR, the monthly VaR will not exceed 20% of the Fund’s NAV. Where a VaR calculation is performed using a horizon other than the one-month regulatory limit, this 20% limit shall be rescaled to reflect the appropriate risk horizon period as directed by the relevant regulatory guidelines. Utilisation refers to the level of risk taken in this context.

The table below details the highest, lowest and average utilisation of the VaR limit, expressed as a percentage of the respective Absolute or Relative VaR regulatory limit.

Sub-Fund	Global Exposure Type	Risk Model	Reference Risk Portfolio	Highest utilisation of the VaR limit %	Lowest utilisation of the VaR limit %	Average utilisation of the VaR limit %
Amundi Emerging Markets Bond FAM Fund	Relative	VaR	95% JP Morgan EMBI Global Diversified Index and 5.00% JP Morgan 1 Month Euro Cash Index	77%	34%	46%

### Value at Risk approach (continued)

#### **LEVERAGE**

The use of FDIs may expose a Fund to a higher degree of risk. In particular, FDI contracts can be highly volatile, and the amount of initial margin is generally small relative to the size of the contract so that transactions may be leveraged in terms of market exposure. A relatively small market movement may have a potentially larger impact on FDIs than on standard bonds or equities.

Leveraged FDI positions can therefore increase a Fund's volatility. Disclosed in the table below is the level of leverage employed by each relevant Fund during the financial year ended 31 December 2022.

<b>Sub-Fund</b>	<b>% Average Leverage Employed</b>

### UCITS V Remuneration Disclosure

Fineco Asset Management Designated Activity Company (the “Management Company”), the Management Company of FAM Series UCITS ICAV acts as the Management Company for two other umbrella UCITS.

The Management Company follows a remuneration policy which complies with the requirements of the UCITS regulation in Ireland and in particular the S.I. 143/2016.

The remuneration policy and practices objectives are consistent with and promote sound and effective risk management, aligning remuneration with long-term performance and risks in order to avoid conflicts of interest. Fixed remuneration components are linked to the roles covered, the professional services rendered and the scope of responsibilities, reflecting the level of the talent, skills and competencies, market pay levels, experience and skills required for each position, as well as the level of excellence demonstrated. Variable remuneration is designed to promote a sustainable long-term development of the Management Company and a solid and effective risk management system. Variable remuneration awards consider the performance of the employee, her/his business unit and the Management Company as a whole, and it is based on both financial and non-financial criteria, among other criteria.

The total remuneration paid by the Management Company to its staff for the financial year end 31 December 2022 is as follows:

#### Financial Year End 31 December 2022

	<u>Fixed</u>	<u>Variable</u>	<u>Total</u>
Employees	6,259,835	2,080,091	8,339,926
Executive Directors	1,120,687	757,346	1,878,033
Non-Executive Directors	85,000	-	85,000

The ICAV represents as at 31 December 2022 around 63% of the Total AUM of the Management Company.

The remuneration policy is reviewed at least annually.

### Securities Financing Transaction Regulations Disclosure (SFTR)

A Securities Financing Transaction (SFT) is defined as per Article 3(11) of the SFTR as:

- a repurchase transaction;
- securities or commodities lending and securities or commodities borrowing;
- a buy-sell back transaction or sell-buy back transaction; or
- a margin lending transaction.

As of financial year ended 31 December 2022, the FAM Series ICAV Set I Sub-Funds do not have any repos, total return swaps and margin lending transactions. Details of securities lending is disclosed below.

### Securities lending

All securities lending transactions entered into by each Sub-Fund are subject to a written legal agreement between each Sub-Fund and the securities lending agent, the Manager, a related party to the Entity, and separately between the securities lending agent and the approved borrowing counterparty. Collateral received in exchange for securities lent is transferred under a title transfer arrangement. Collateral received is delivered to and held in an account in the name of the Trustee on behalf of each Fund. Collateral received is segregated from the assets belonging to each Sub-Fund's Trustee or the securities lending agent.

All OTC FDIs and total return swaps are entered into by each Sub-Fund under an International Swaps and Derivatives Associations, Inc. Master Agreement ("ISDA Master Agreement") or similar agreement. An ISDA Master Agreement is a bilateral agreement between the Fund and a counterparty that governs OTC FDIs (including total return swaps) entered into by the parties. The parties' exposures under the ISDA Master Agreement are netted and collateralised together, therefore any collateral disclosures provided are in respect of all OTC FDIs entered into by a Sub-Fund under the ISDA Master Agreement, not just total return swaps.

All collateral received/posted by each Sub-Fund under the ISDA Master Agreement is transferred bilaterally under a title transfer arrangement.

The following table details the value of securities on loan as a proportion of each Sub-Fund's total lendable assets and NAV and the value of total return swaps as a proportion of the Sub-Fund's NAV, as at 31 December 2022 and the income/returns earned for the year ended 31 December 2022. Total lendable assets represent the aggregate value of assets forming part of a Sub-Fund's securities lending programme. This excludes any assets held by the Sub-Funds that are not considered lendable due to any market, regulatory, investment or other restriction. The value of total return swaps is based on the underlying exposure value on a gross absolute basis.

### Securities Financing Transaction Regulations Disclosure (SFTR) (continued)

Income earned during the year by the Sub-Funds from securities lending transactions is disclosed in the Fund's notes to the Financial Statements. The total income earned from securities lending transactions is split between the relevant Sub-Fund and the Securities Lending Agent. Each Sub-Fund receives at least 60% while securities lending agent receives up to 40% of such income with all operational costs borne out of the securities lending agent's share. All returns and costs from total return swaps will accrue to each Sub-Fund and are not subject to any returns or costs sharing arrangements with the Sub-Fund's Manager or any other third parties. The following table details the value of securities on loan (individually identified in the relevant Fund's schedules of investments), analysed by counterparty as at 31 December 2022.

<b>Counterparty</b>	<b>Amount on loan</b>	<b>Collateral received</b>
Bank of Nova Scotia London Branch Triparty	253,599,750	263,514,174
Barclays Bank PLC Fixed Income Triparty	76,180,282	85,371,372
BNP Paribas-Securities Services Triparty	52,669,164	57,784,721
HSBC Bank PLC Triparty	43,765,662	46,084,423
UBS AG JP Morgan Triparty	9,780,615	10,000,664

All securities on loan have an open maturity tenor as they are callable or terminable daily.

### Sustainable Finance Disclosure Regulation (SFDR)

Environmental, social and governance (“ESG”) Integration describes the mechanism by which the Manager, acting through the Investment Manager as its delegate, may integrate sustainability risks into investment decision-making, which may, where relevant, require the Investment Manager to assess the potential sustainability risks associated with the purchase of investments.

Sustainability Risk means an ESG event or condition that, if it occurs, could potentially or actually cause a material negative impact on the value of a Sub-Fund’s investment. Sustainability risks can either represent a risk of their own or have an impact on other risks and may contribute significantly to risks, such as market risks, operational risks, liquidity risks or counterparty risks.

The ICAV reserves the right to reassess this classification at any time and shall keep this classification under review pending finalisation of the Regulatory Technical Standards (“RTS”).

If the ICAV determines at any future point that the Fund does not meet the criteria to qualify as a Sustainable Investment Fund, this disclosure shall be updated or withdrawn as appropriate, in accordance with the revised classification of the Fund.

The following Sub-Funds are classified as Article 6 under the Sustainable Finance Disclosure Regulation (“SFDR”):

Amundi Emerging Markets Bond FAM Fund	Emerging Markets Debt FAM Fund
Emerging Markets Bond Hard Currency FAM Fund	Infusive Consumer Alpha Global Leaders FAM Fund
Euro High Yield Bond FAM Fund	Invesco Global Total Return Bond FAM Fund
Euro Short Duration Bond FAM Fund	Jupiter Flexible Income FAM Fund
European High Yield Bond FAM Fund	US Equity Value FAM Fund
Fineco AM Global Premium Equities Fund	Vontobel Emerging Markets Debt FAM Fund
Flexible Equity Strategy FAM Fund	Morgan Stanley US Advantage FAM Fund

The investments underlying the above named Sub-Funds do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the above named Sub-Funds as Article 6 Funds means that the Sub-Funds do not promote environmental or social characteristics in a way that meets the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meets the specific criteria contained in Article 9 of SFDR. Accordingly, the Sub-Funds do not deem sustainability risks to be relevant and does not integrate sustainability risks into its investment decisions due to the investment strategy of the Sub-Funds. Accordingly, it is not anticipated that sustainability risks will materially impact the expected risk or return characteristics of the Sub-Fund. Please refer to the section of the Prospectus entitled "Sustainable Finance Disclosure" for further information.

**Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/85**

**Product name:** Fidelity Euro Bond FAM Fund  
**Legal entity identifier:** 635400QQSTLMRC4MMX19

**Environmental and/or social characteristics**

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Did this financial product have a sustainable investment objective?** *[tick and fill in as relevant, the percentage figure represents the minimum commitment to sustainable investments]*

<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> <b>Yes</b>	<input type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <b>No</b>
<input type="checkbox"/> It made <b>sustainable investments with an environmental objective:</b> ___% <ul style="list-style-type: none"> <li><input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> </ul> <input type="checkbox"/> It made <b>sustainable investments with a social objective:</b> ___%	<input checked="" type="checkbox"/> It promoted <b>Environmental/Social (E/S) characteristics</b> and while it did not have as its objective a sustainable investment, it had a proportion of 8.2% of sustainable investments <ul style="list-style-type: none"> <li><input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> <li><input checked="" type="checkbox"/> with a social objective</li> </ul> <input type="checkbox"/> It promoted E/S characteristics, but <b>did not make any sustainable investments</b>

**To what extent were the environmental and/or social characteristics promoted by this financial product met?**

The fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the period under review. The Fund promoted environmental and social characteristics by investing in equity securities of issuers deemed to maintain favourable ESG characteristics. Environmental characteristics included carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, while social characteristics included product safety, supply chain, health and safety and human rights.

The fund partially made sustainable investments.

No reference benchmark was designated for the purpose of attaining the environmental and social characteristics promoted.

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

The performance of the sustainability indicators the mandate used to measure the attainment of the sustainable environmental or social characteristics that it promoted during the period in review as of 31 of december 2022 was:

- i) 82% of the mandate was invested in securities of issuers with favourable ESG characteristics in accordance with Fidelity's Sustainable Investing Framework;
- ii) in respect of its direct investments in corporate issuers, 0% of the mandate invested in securities of issuers with exposure to the Exclusions;
- iii) 8.2% of the mandate was invested in sustainable investments;
- iv) 4% of the mandate was invested in sustainable investments with an environmental objective in economic activities (that qualify as environmentally sustainable under the EU Taxonomy);
- v) 2.1% of the mandate was invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy);
- vi) 2.7% of the mandate invested in sustainable investments with a social objective.

● ***...and compared to previous periods?***

Not applicable as this is the first reporting period

Unaudited Section (continued)

Sustainable Finance Disclosure Regulation (SFDR) (continued)

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

While it did not have as its objective a sustainable investment, it had a proportion of 8.2% of sustainable investments

The mandate determined a sustainable investment as follows:

- (a) issuers that undertook economic activities that contribute to one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or
- (b) issuers whereby the majority of their business activities (more than 50% of revenue) contributed to environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals (“SDGs”); or
- (c) issuers which set a decarbonisation target consistent with a 1.5 degree warming scenario or lower (verified by the Science Based Target Initiative or a Fidelity Proprietary Climate Rating) which was considered to contribute to environmental objectives; provided they do no significant harm, meet minimum safeguards and good governance criteria.

- ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

Sustainable investments were screened for involvement in activities that caused significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standards that relate to principal adverse indicators (PAIs) as well as performance on PAI metrics. This included:

Norms-based screens - the screening out of securities identified under Fidelity’s existing norms-based screens (as set out below);

Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a ‘Very Severe’ controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and

- PAI indicators: quantitative data (where available) on PAI indicators was used to evaluate whether an issuer is involved in activities that cause significant harm to any environmental or social objective.

***How were the indicators for adverse impacts on sustainability factors taken into account?***

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators. Issuers with a low score was ineligible to be ‘sustainable investments’ Fidelity’s fundamental research determined that the company was not breaching “do no significant harm” requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Unaudited Section (continued)

Sustainable Finance Disclosure Regulation (SFDR) (continued)

- *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

Norms-based screens were applied: Issuers identified as failing to behave in a way which met their fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, were not considered sustainable investments.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.*

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

**How did this financial product consider principal adverse impacts on sustainability factors?**

Principal adverse impacts on sustainability factors were considered through and incorporated into investment decisions through a variety of tools, including:

- i. Due Diligence - analysis of whether principle adverse impacts were material and negative.
- ii. ESG rating - Fidelity references ESG ratings which incorporate material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.
- iii. Exclusions - When investing directly in corporate issuers, the Fund applied the Exclusions (as defined below) to help mitigate PAI through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC.

## FAM Series UCITS ICAV

### Unaudited Section (continued)

#### Sustainable Finance Disclosure Regulation (SFDR) (continued)

In respect of its direct investments in corporate issuers, the Fund is subject to:

- a. a firm-wide exclusions list, which includes cluster munitions and anti-personnel landmines, and
- b. a norms-based screening of issuers which the investment manager considers have failed to conduct their business in accordance with international norms, including as set out in the UNGC.
- c. Fineco Asset Management DAC Investment Exclusion Policy effective on 27 July 2022.

The above exclusions and screens (the “Exclusions”) may be updated from time to time.

Please refer to the website for further information on the Sustainable investing framework ([fidelityinternational.com](http://fidelityinternational.com)) and further details on the Exclusion Policy can be found on the Management Company’s website at the following link [FAM - Sustainability | Fineco FAM - Fineco FAM \(finecoassetmanagement.com\)](#)

The investment manager also has discretion to implement enhanced, stricter sustainable requirements and exclusions from time to time.

- iv Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts on sustainability factors and, in some circumstances, advocate for enhancing principal adverse impacts and sustainability metrics. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).
- v Quarterly reviews - monitoring of principal adverse impacts through The Fund’s quarterly review process.

The specific PAI indicators that were taken into consideration were subject to data availability and may evolve with improving data quality and availability. In certain circumstances, such as indirect investments made by The Fund, PAI may not have been considered.

**To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?** *[include section for the financial products referred to in Article 6, first paragraph, of Regulation (EU) 2020/852 and include information in accordance with Article 51 of this Regulation]*

The mandate did invest 4% in sustainable investments with an environmental objective aligned with the EU Taxonomy.

The compliance of the investments of the Mandate with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties.

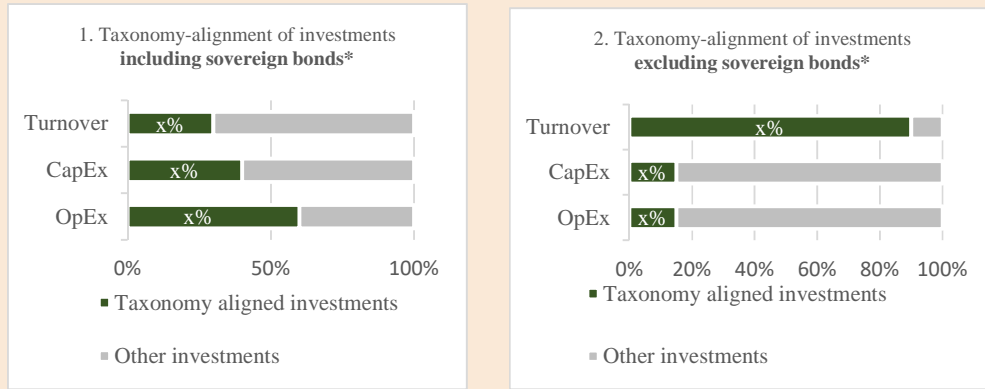

The taxonomy alignment of the underlying investments of the Mandate is measured by turnover.

*[include note for the financial products referred to in Article 6, first paragraph, of Regulation (EU) 2020/852*

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflects the “greenness” of investee companies today.
- **capital expenditure (CapEx)** shows the green investments made by investee companies, relevant for a transition to a green economy.
- **operational expenditure (OpEx)** reflects the green operational activities of investee companies.

*The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

*\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

Turnover - 4%  
 Capex - 6.14%  
 Opex - 4.79%

Turnover - 6.87%  
 Capex - 10.80%  
 Opex - 8.42%

● **What was the share of investments made in transitional and enabling activities?**

Due to data constraints, we aim to report the share of investments in transitional and enabling activities in our next periodic disclosure.

*[include note for the financial products referred to in Article 6, first paragraph, of Regulation (EU) 2020/852 that invest in environmental economic activities that are not environmentally sustainable economic activities]*

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Not applicable

**What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

The fund invested 2.1% in sustainable investments with an environmental objective that was not aligned with the EU Taxonomy.

**What was the share of socially sustainable investments?**

The Mandate invested 2.7% in sustainable investments with a social objective.

**What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

The remaining investments of The Fund was invested in assets aligned with the financial objective of the Fund, cash and cash equivalents for liquidity purposes and derivatives which may have been used for investment and efficient portfolio management.

As a minimum environmental and social safeguard, the Fund adhered to the Exclusions.

**What actions have been taken to meet the environmental and/or social characteristics during the reference period?**

The Investment managers proprietary ESG ratings framework as well as their access to external ESG data providers and ratings agencies have allowed them to assess the ESG characteristics of fund holdings over the period, and maintain a consideration of Principle Adverse Impacts. Included in the assessment is to what extent the issuers of these securities deliver on our expectations for best practices. Additionally, the Investment manager have instated a Quarterly Sustainability Review for their Article 8 funds, which has created a specific forum for discussion of the funds qualitative and quantitative ESG characteristics, and whether they are consistent with requirements and client expectations. This is an extension of their pre-existing risk and compliance processes. Where appropriate they have utilised their spheres of influence on companies via active engagement and stewardship activities.

**How did this financial product perform compared to the reference benchmark?**

An index was not designated as a reference benchmark to determine whether this financial product is aligned with the environmental or social characteristics that it promoted.

*[include note for financial products where an index has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product]*

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How does the reference benchmark differ from a broad market index?***  
Not applicable
- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***  
Not applicable
- ***How did this financial product perform compared with the reference benchmark?***  
Not applicable
- ***How did this financial product perform compared with the broad market index?***  
Not applicable

**Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/85**

**Product name:** Fidelity Euro Short Term Bond FAM Fund

**Legal entity identifier:** 635400PB1H3MA6O1JH42

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

## Environmental and/or social characteristics

<b>Did this financial product have a sustainable investment objective?</b> <i>[tick and fill in as relevant, the percentage figure represents the minimum commitment to sustainable investments]</i>	
<input checked="" type="radio"/> <input type="radio"/> <input type="checkbox"/> <b>Yes</b>	<input type="radio"/> <input checked="" type="radio"/> <input checked="" type="checkbox"/> <b>No</b>
<input type="checkbox"/> It made <b>sustainable investments with an environmental objective:</b> ___% <ul style="list-style-type: none"> <li><input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> </ul>	<input checked="" type="checkbox"/> It promoted <b>Environmental/Social (E/S) characteristics</b> and while it did not have as its objective a sustainable investment, it had a proportion of 5% of sustainable investments <ul style="list-style-type: none"> <li><input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> <li><input checked="" type="checkbox"/> with a social objective</li> </ul>
<input type="checkbox"/> It made <b>sustainable investments with a social objective:</b> ___%	<input type="checkbox"/> It promoted E/S characteristics, but <b>did not make any sustainable investments</b>

**To what extent were the environmental and/or social characteristics promoted by this financial product met?**

The fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the period under review. The Fund promoted environmental and social characteristics by investing in securities of issuers with favourable ESG characteristics. Favourable ESG characteristics were determined by reference to ESG ratings. ESG ratings considered environmental characteristics including carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, as well as social characteristics including product safety, supply chain, health and safety and human rights.

No reference benchmark has been designated for the purpose of attaining the environmental and social characteristics promoted.

● ***How did the sustainability indicators perform?***

The performance of the sustainability indicators the mandate used to measure the attainment of the sustainable environmental or social characteristics that it promoted during the period in review as of 31 of december 2022 was:

- i. 81% of the mandate was invested in securities of issuers with favourable ESG characteristics in accordance with Fidelity’s Sustainable Investing Framework;
- ii. in respect of its direct investments in corporate issuers, 0% of the mandate invested in securities of issuers with exposure to the Exclusions;
- iii. 5% of the mandate was invested in sustainable investments;
- iv. 2% of the mandate was invested in sustainable investments with an environmental objective in economic activities (that qualify as environmentally sustainable under the EU Taxonomy);
- v. 1% of the mandate was invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy);
- vi. 2% of the mandate invested in sustainable investments with a social objective.

● ***...and compared to previous periods?***

Not applicable as this is the first reporting period

**Sustainability indicators**

measure how the environmental or social characteristics promoted by the financial product are attained.

Unaudited Section (continued)

Sustainable Finance Disclosure Regulation (SFDR) (continued)

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

While it did not have as its objective a sustainable investment, it had a proportion of 5% of sustainable investments

The mandate determined a sustainable investment as follows:

- issuers that undertook economic activities that contribute to one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or
- issuers whereby the majority of their business activities (more than 50% of revenue) contributed to environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals (“SDGs”); or
- issuers which set a decarbonisation target consistent with a 1.5 degree warming scenario or lower (verified by the Science Based Target Initiative or a Fidelity Proprietary Climate Rating) which was considered to contribute to environmental objectives; provided they do no significant harm, meet minimum safeguards and good governance criteria.

- ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

Sustainable investments were screened for involvement in activities that caused significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standards that relate to principal adverse indicators (PAIs) as well as performance on PAI metrics. This included:

Norms-based screens - the screening out of securities identified under Fidelity’s existing norms-based screens (as set out below);

Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a ‘Very Severe’ controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and

— PAI indicators: quantitative data (where available) on PAI indicators was used to evaluate whether an issuer is involved in activities that cause significant harm to any environmental or social objective.

- ***How were the indicators for adverse impacts on sustainability factors taken into account?***

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators. Issuers with a low score was ineligible to be ‘sustainable investments’ Fidelity’s fundamental research determined that the company was not breaching “do no significant harm” requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Unaudited Section (continued)

Sustainable Finance Disclosure Regulation (SFDR) (continued)

- — *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

Norms-based screens were applied: Issuers identified as failing to behave in a way which met their fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, were not considered sustainable investments.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.*

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

**How did this financial product consider principal adverse impacts on sustainability factors?**

Principal adverse impacts on sustainability factors were considered through and incorporated into investment decisions through a variety of tools, including:

- Due Diligence - analysis of whether principle adverse impacts were material and negative.
- ESG rating - Fidelity references ESG ratings which incorporate material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.
- Exclusions - When investing directly in corporate issuers, the Fund applied the Exclusions (as defined below) to help mitigate PAI through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC.

## FAM Series UCITS ICAV

### Unaudited Section (continued)

#### Sustainable Finance Disclosure Regulation (SFDR) (continued)

In respect of its direct investments in corporate issuers, the Fund was subject to:

- a. a firm-wide exclusions list, which included cluster munitions and anti-personnel landmines, and
- b. a norms-based screening of issuers which the investment manager considered to have failed to conduct their business in accordance with international norms, including as set out in the UNGC.
- c. Fineco Asset Management DAC Investment Exclusion Policy effective on 27 July 2022.

The above exclusions and screens (the “Exclusions”) may be updated from time to time.

Please refer to the website for further information on the Sustainable investing framework ([fidelityinternational.com](http://fidelityinternational.com)) and further details on the Exclusion Policy can be found on the Management Company’s website at the following link [FAM - Sustainability | Fineco FAM - Fineco FAM \(\[finecoassetmanagement.com\]\(http://finecoassetmanagement.com\)\)](#)

The investment manager also had discretion to implement enhanced, stricter sustainable requirements and exclusions from time to time.

- iv. Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts on sustainability factors and, in some circumstances, advocate for enhancing principal adverse impacts and sustainability metrics. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).
- v. Quarterly reviews - monitoring of principal adverse impacts through The Fund’s quarterly review process.

The specific PAI indicators that were taken into consideration were subject to data availability and may evolve with improving data quality and availability. In certain circumstances, such as indirect investments made by The Fund, PAI may not have been considered.

**What was the proportion of sustainability-related investments?**

The Fund invested 5% in sustainable investments for the period in review

**Asset allocation**

describes the share of investments in specific assets.

● **What was the asset allocation?**

(#1 aligned with E/S characteristics) The Fund will invest:

1. 81% of its assets in securities of issuers with favourable ESG characteristics;
2. 5% in sustainable investments (#1A sustainable)\* of which 2%

have an environmental objective (which is aligned with the EU Taxonomy), 1% have an environmental objective (which is not aligned with the EU Taxonomy) 2% have a social objective.

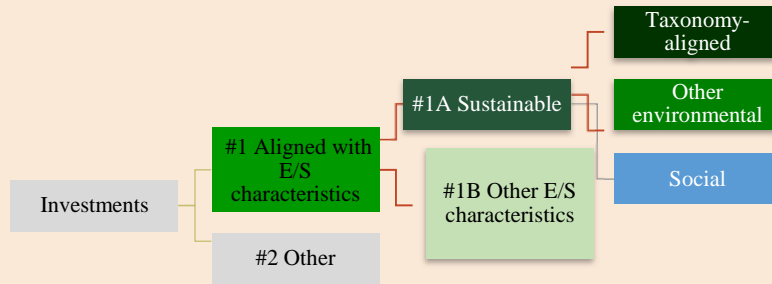

(#1B Other E/S characteristics) Includes securities of issuers with favourable ESG characteristics but are not sustainable investments.

*[include note only for the financial products referred to in Article 6, first paragraph, of Regulation (EU) 2020/852]*

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

*[Include only relevant boxes, remove irrelevant ones for the financial product]*

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

*[include the note below where the financial product made sustainable investments]*

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

**To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?** *[include section for the financial products referred to in Article 6, first paragraph, of Regulation (EU) 2020/852 and include information in accordance with Article 51 of this Regulation]*

The fund invested 2% in sustainable investments with an environmental objective aligned with the EU Taxonomy.

The compliance of the investments of the Mandate with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties.

The taxonomy alignment of the underlying investments of the Mandate is measured by turnover.

*[include note for the financial products referred to in Article 6, first paragraph, of Regulation (EU) 2020/852*

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflects the “greenness” of investee companies today.

- **capital expenditure** (CapEx) shows the green investments made by investee companies, relevant for a transition to a green economy.

- **operational expenditure** (OpEx) reflects the green operational activities of investee companies.

*The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\*For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures

*[include note for the financial products referred to in Article 6, first paragraph, of Regulation (EU) 2020/852 that invest in environmental economic activities that are not environmentally sustainable economic activities]*

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● ***What was the share of investments made in transitional and enabling activities?***

Due to data constraints, we aim to report the share of investments in transitional and enabling activities in our next periodic disclosure.

● ***How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?***

Not applicable

**What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

The fund invested 1% in sustainable investments with an environmental objective that was not aligned with the EU Taxonomy.

**What was the share of socially sustainable investments?**

The fund invested 2% in sustainable investments with a social objective.

Unaudited Section (continued)

Sustainable Finance Disclosure Regulation (SFDR) (continued)

**What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

The remaining investments of The Fund was invested in assets aligned with the financial objective of The Fund, cash and cash equivalents for liquidity purposes and derivatives which was used for investment and efficient portfolio management.

As a minimum environmental and social safeguard, The Fund adhered to the Exclusions.

**What actions have been taken to meet the environmental and/or social characteristics during the reference period?**

The Investment managers proprietary ESG ratings framework as well as their access to external ESG data providers and ratings agencies have allowed them to assess the ESG characteristics of fund holdings over the period, and maintain a consideration of Principle Adverse Impacts. Included in the assessment is to what extent the issuers of these securities deliver on our expectations for best practices. Additionally, the Investment manager have instated a Quarterly Sustainability Review for their Article 8 funds, which has created a specific forum for discussion of the funds qualitative and quantitative ESG characteristics, and whether they are consistent with requirements and client expectations. This is an extension of their pre-existing risk and compliance processes. Where appropriate they have utilised their spheres of influence on companies via active engagement and stewardship activities.

**How did this financial product perform compared to the reference benchmark?**

**Product name:** Fidelity Global Dividend FAM Fund

**Legal entity identifier:** 635400I6FXODNXOBIV20

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

## Environmental and/or social characteristics

<b>Did this financial product have a sustainable investment objective?</b> <i>[tick and fill in as relevant, the percentage figure represents the minimum commitment to sustainable investments]</i>	
<input checked="" type="radio"/> <input type="radio"/> <input type="checkbox"/> <b>Yes</b>	<input type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <b>No</b>
<input type="checkbox"/> It made <b>sustainable investments with an environmental objective:</b> ___% <ul style="list-style-type: none"> <li><input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> </ul>	<input checked="" type="checkbox"/> It promoted <b>Environmental/Social (E/S) characteristics</b> and while it did not have as its objective a sustainable investment, it had a proportion of 55.3% of sustainable investments <ul style="list-style-type: none"> <li><input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> <li><input checked="" type="checkbox"/> with a social objective</li> </ul>
<input type="checkbox"/> It made <b>sustainable investments with a social objective:</b> ___%	<input type="checkbox"/> It promoted E/S characteristics, but <b>did not make any sustainable investments</b>

**To what extent were the environmental and/or social characteristics promoted by this financial product met?**

The fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the period under review. The Fund promoted environmental and social characteristics by investing in equity securities of issuers deemed to maintain favourable ESG characteristics. Environmental characteristics included carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, while social characteristics included product safety, supply chain, health and safety and human rights.

The fund partially made sustainable investments.

No reference benchmark was designated for the purpose of attaining the environmental and social characteristics promoted.

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

The performance of the sustainability indicators the mandate used to measure the attainment of the sustainable environmental or social characteristics that it promoted during the period in review as of 31 of december 2022 was:

- i) 90% of the mandate was invested in securities of issuers with favourable ESG characteristics in accordance with Fidelity's Sustainable Investing Framework;
- ii) in respect of its direct investments in corporate issuers, 0% of the mandate invested in securities of issuers with exposure to the Exclusions;
- iii) 55.3% of the mandate was invested in sustainable investments;
- iv) 2.3% of the mandate was invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy);
- v) 16.3% of the mandate was invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy);
- vi) 36.9% of the mandate invested in sustainable investments with a social objective.

● ***...and compared to previous periods?***

Not applicable as this is the first reporting period

● ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

While it did not have as its objective a sustainable investment, it had a proportion of 55.3% of sustainable investments

Unaudited Section (continued)

Sustainable Finance Disclosure Regulation (SFDR) (continued)

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The mandate determined a sustainable investment as follows:

- (a) issuers that undertook economic activities that contribute to one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or
- (b) issuers whereby the majority of their business activities (more than 50% of revenue) contributed to environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals (“SDGs”); or
- (c) issuers which set a decarbonisation target consistent with a 1.5 degree warming scenario or lower (verified by the Science Based Target Initiative or a Fidelity Proprietary Climate Rating) which was considered to contribute to environmental objectives; provided they do no significant harm, meet minimum safeguards and good governance criteria.

***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

Sustainable investments were screened for involvement in activities that caused significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standards that relate to principal adverse indicators (PAIs) as well as performance on PAI metrics. This included:

Norms-based screens - the screening out of securities identified under Fidelity’s existing norms-based screens (as set out below);

Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a ‘Very Severe’ controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and

PAI indicators: quantitative data (where available) on PAI indicators was used to evaluate whether an issuer is involved in activities that cause significant harm to any environmental or social objective.

***How were the indicators for adverse impacts on sustainability factors taken into account?***

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators. Issuers with a low score was ineligible to be ‘sustainable investments’ Fidelity’s fundamental research determined that the company was not breaching “do no significant harm” requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Unaudited Section (continued)

Sustainable Finance Disclosure Regulation (SFDR) (continued)

*Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

Norms-based screens were applied: Issuers identified as failing to behave in a way which met their fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, were not considered sustainable investments.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.*

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

**How did this financial product consider principal adverse impacts on sustainability factors?**

Principal adverse impacts on sustainability factors were considered through and incorporated into investment decisions through a variety of tools, including:

- i. Due Diligence - analysis of whether principle adverse impacts were material and negative.
- ii. ESG rating - Fidelity references ESG ratings which incorporate material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.
- iii. Exclusions - When investing directly in corporate issuers, the Fund applied the Exclusions (as defined below) to help mitigate PAI through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC.

## FAM Series UCITS ICAV

### Unaudited Section (continued)

#### Sustainable Finance Disclosure Regulation (SFDR) (continued)

In respect of its direct investments, The Fund was subject to:

- a. a firm-wide exclusions list, which included cluster munitions and anti-personnel landmines, and
- b. a “Sustainable Fund Exclusion List”, which included, but is not limited to, tobacco, weapons and thermal coal and
- c. a principle-based screening policy which includes:
  - i) norms-based screening of issuers which the investment manager considered to have failed to conduct their business in accordance with international norms, including as set out in the UNGC; and
  - ii) negative screening of certain sectors, issuers or practices based on specific ESG criteria where revenue thresholds may be applied.
- d. Fineco Asset Management DAC Investment Exclusion Policy effective on 27 July 2022.

The above exclusions and screens (the “Exclusions”) may be updated from time to time. Please refer to the website for further information on the Sustainable investing framework ([fidelityinternational.com](https://www.fidelityinternational.com)) and further details on the Exclusion Policy can be found on the Management Company’s website at the following link [FAM - Sustainability | Fineco FAM - Fineco FAM \(finecoassetmanagement.com\)](#)

The investment manager also has discretion to implement enhanced, stricter sustainable requirements and exclusions from time to time.

- iv. Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts on sustainability factors and, in some circumstances, advocate for enhancing principal adverse impacts and sustainability metrics. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).
- v. Voting - Fidelity’s voting policy includes explicit minimum standards for board gender diversity and engagement with climate change. Fidelity may also vote to enhance issuer performance on other indicators.
- vi. Quarterly reviews - monitoring of principal adverse impacts through The Fund’s quarterly review process.

The specific PAI indicators that were taken into consideration were subject to data availability and may evolve with improving data quality and availability. In certain circumstances, such as indirect investments made by The Fund, PAI may not have been considered.

**To what extent were the environmental and/or social characteristics promoted by this financial product met?**

The fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the period under review. The Fund promoted environmental and social characteristics by investing in equity securities of issuers deemed to maintain favourable ESG characteristics. Environmental characteristics included carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, while social characteristics included product safety, supply chain, health and safety and human rights.

The fund partially made sustainable investments.

No reference benchmark was designated for the purpose of attaining the environmental and social characteristics promoted.

● ***How did the sustainability indicators perform?***

The performance of the sustainability indicators the mandate used to measure the attainment of the sustainable environmental or social characteristics that it promoted during the period in review as of 31 of december 2022 was:

- i) 92% of the mandate was invested in securities of issuers with favourable ESG characteristics in accordance with Fidelity’s Sustainable Investing Framework;
- ii) in respect of its direct investments in corporate issuers, 0% of the mandate invested in securities of issuers with exposure to the Exclusions;
- iii) 87.1% of the mandate was invested in sustainable investments;
- iv) 4% of the mandate was invested in sustainable investments with an environmental objective in economic activities (that qualify as environmentally sustainable under the EU Taxonomy);
- v) 35.2% of the mandate was invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy);
- vi) 46.5% of the mandate invested in sustainable investments with a social objective.

● ***...and compared to previous periods?***

Not applicable as this is the first reporting period

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

Unaudited Section (continued)

Sustainable Finance Disclosure Regulation (SFDR) (continued)

● ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

While it did not have as its objective a sustainable investment, it had a proportion of 87.1% of sustainable investments

The mandate determined a sustainable investment as follows:

(a) issuers that undertook economic activities that contribute to one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy; or

(b) issuers whereby the majority of their business activities (more than 50% of revenue) contributed to environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals (“SDGs”); or

(c) issuers which set a decarbonisation target consistent with a 1.5 degree warming scenario or lower (verified by the Science Based Target Initiative or a Fidelity Proprietary Climate Rating) which was considered to contribute to environmental objectives; provided they do no significant harm, meet minimum safeguards and good governance criteria.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

Sustainable investments were screened for involvement in activities that caused significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standards that relate to principal adverse indicators (PAIs) as well as performance on PAI metrics. This included:

Norms-based screens - the screening out of securities identified under Fidelity’s existing norms-based screens (as set out below);

Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a ‘Very Severe’ controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and

PAI indicators: quantitative data (where available) on PAI indicators was used to evaluate whether an issuer is involved in activities that cause significant harm to any environmental or social objective.

● ***How were the indicators for adverse impacts on sustainability factors taken into account?***

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators. Issuers with a low score was ineligible to be ‘sustainable investments’ Fidelity’s fundamental research determined that the company was not breaching “do no significant harm” requirements or was on the path to mitigate the adverse impacts through effective management or transition.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Unaudited Section (continued)

Sustainable Finance Disclosure Regulation (SFDR) (continued)

*Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

Norms-based screens were applied: Issuers identified as failing to behave in a way which met their fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, were not considered sustainable investments.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.*

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

**How did this financial product consider principal adverse impacts on sustainability factors?**

Principal adverse impacts on sustainability factors were considered through and incorporated into investment decisions through a variety of tools, including:

- (i) Due Diligence - analysis of whether principle adverse impacts were material and negative.
- (ii) ESG rating - Fidelity references ESG ratings which incorporate material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.
- (iii) Exclusions - When investing directly in corporate issuers, the Fund applied the Exclusions (as defined below) to help mitigate PAI through excluding harmful sectors and prohibiting investment in issuers that breach international standards, such as the UNGC.

## FAM Series UCITS ICAV

### Unaudited Section (continued)

#### Sustainable Finance Disclosure Regulation (SFDR) (continued)

In respect of its direct investments, The Fund was subject to:

- a. a firm-wide exclusions list, which included cluster munitions and anti-personnel landmines, and
- b. a “Sustainable Fund Exclusion List”, which included, but is not limited to, tobacco, weapons and thermal coal and
- c. a principle-based screening policy which includes:
  - i) norms-based screening of issuers which the investment manager considered to have failed to conduct their business in accordance with international norms, including as set out in the UNGC; and
  - ii) negative screening of certain sectors, issuers or practices based on specific ESG criteria where revenue thresholds may be applied.
- d. Fineco Asset Management DAC Investment Exclusion Policy effective on 27 July 2022.

The above exclusions and screens (the “Exclusions”) may be updated from time to time. Please refer to the website for further information on the Sustainable investing framework ([fidelityinternational.com](https://www.fidelityinternational.com)) and further details on the Exclusion Policy can be found on the Management Company’s website at the following link [FAM - Sustainability | Fineco FAM - Fineco FAM \(finecoassetmanagement.com\)](#)

The investment manager also has discretion to implement enhanced, stricter sustainable requirements and exclusions from time to time.

- (iv) Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts on sustainability factors and, in some circumstances, advocate for enhancing principal adverse impacts and sustainability metrics. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).
- (v) Voting - Fidelity’s voting policy included explicit minimum standards for board gender diversity and engagement with climate change. Fidelity may also vote to enhance issuer performance on other indicators.
- (vi) Quarterly reviews - monitoring of principal adverse impacts through The Fund’s quarterly review process.

The specific PAI indicators that were taken into consideration were subject to data availability and may evolve with improving data quality and availability. In certain circumstances, such as indirect investments made by The Fund, PAI may not have been considered.

ORSTED A/S	2.35	UTILITIES	DENMARK

**Asset allocation** describes the share of investments in specific assets.

**What was the proportion of sustainability-related investments?**

The Fund invested 87.1% in sustainable investments for the period in review

● **What was the asset allocation?**

(#1 aligned with E/S characteristics) The Fund will invest:

1. 92% of its assets in securities of issuers with favourable ESG characteristics;
2. 87.1% in sustainable investments (#1A sustainable)\* of which 4% have an environmental objective (which is aligned with the EU Taxonomy), 35.2% have an environmental objective (which is not aligned with the EU Taxonomy) 46.5% have a social objective.

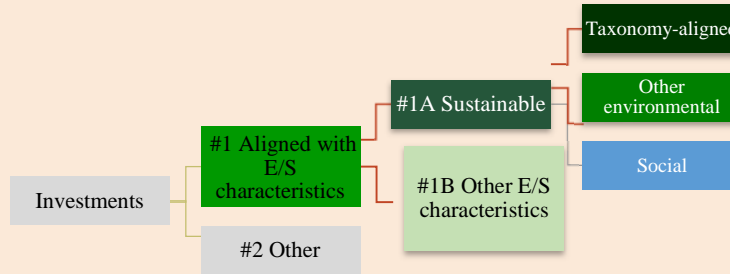

(#1B Other E/S characteristics) Includes securities of issuers with favourable ESG characteristics but are not sustainable investments.

*[include note only for the financial products referred to in Article 6, first paragraph, of Regulation (EU) 2020/852]*

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

*[Include only relevant boxes, remove irrelevant ones for the financial product]*

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

*[include the note below where the financial product made sustainable investments]*

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

#### Sustainable Finance Disclosure Regulation (SFDR) (continued)

##### ● *In which economic sectors were the investments made?*

Economic sectors of the investments made during the period in review were

Sectors	Weight
INFORMATION TECHNOLOGY	26.76
HEALTH CARE	23.7
FINANCIALS	14.67
INDUSTRIALS	11.04
UTILITIES	7.57
CASH	5.96
CONSUMER DISCRETIONARY	3.63
COMMUNICATION SERVICES	2.72
MATERIALS	1.74
CONSUMER STAPLES	1.41
REAL ESTATE	0.8

##### **To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?** *[include section for the financial products referred to in Article 6, first paragraph, of Regulation (EU) 2020/852 and include information in accordance with Article 51 of this Regulation]*

The mandate did invest 4% in sustainable investments with an environmental objective aligned with the EU Taxonomy.

The compliance of the investments of the Mandate with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties.

The taxonomy alignment of the underlying investments of the Mandate is measured by turnover.

Unaudited Section (continued)

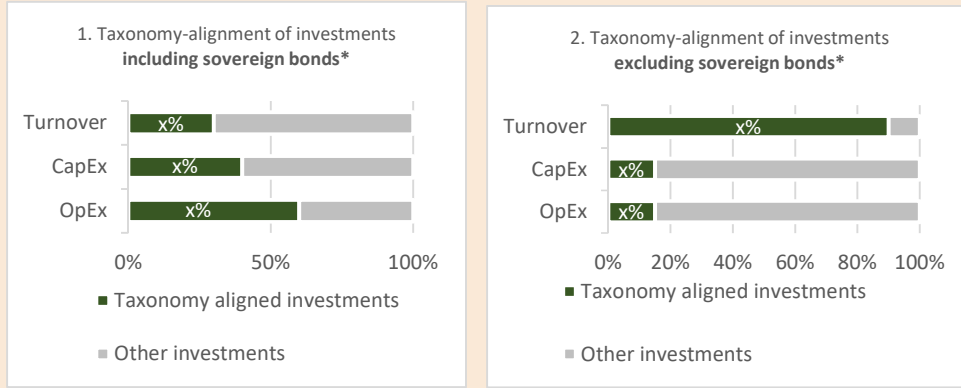

Sustainable Finance Disclosure Regulation (SFDR) (continued)

*[include note for the financial products referred to in Article 6, first paragraph, of Regulation (EU) 2020/852*

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflects the “greenness” of investee companies today.
- **capital expenditure** (CapEx) shows the green investments made by investee companies, relevant for a transition to a green economy.
- **operational expenditure** (OpEx) reflects the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\*For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures

Turnover - 4%  
 Capex - 4.54%  
 Opex - 2.37%

● **What was the share of investments made in transitional and enabling activities?**

Due to data constraints, we aim to report the share of investments in transitional and enabling activities in our next periodic disclosure.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Not applicable

**What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

The fund invested 35.2% in sustainable investments with an environmental objective that was not aligned with the EU Taxonomy.

**What was the share of socially sustainable investments?**

The Mandate invested 46.5% in sustainable investments with a social objective.

*[include note for the financial products referred to in Article 6, first paragraph, of Regulation (EU) 2020/852 that invest in environmental economic activities that are not environmentally sustainable economic activities]*

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

**What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

The remaining investments of the mandate were invested in securities of issuers that were able to demonstrate that they were on an improving trajectory with respect to their ESG characteristics, as well as cash and cash equivalents for liquidity purposes and derivatives which were used for investment and efficient portfolio management.

As a minimum environmental and social safeguard, the mandate adhered to the Exclusions.

**What actions have been taken to meet the environmental and/or social characteristics during the reference period?**

The Investment managers proprietary ESG ratings framework as well as their access to external ESG data providers and ratings agencies have allowed them to assess the ESG characteristics of fund holdings over the period, and maintain a consideration of Principle Adverse Impacts. Included in the assessment is to what extent the issuers of these securities deliver on our expectations for best practices. Additionally, the Investment manager have instated a Quarterly Sustainability Review for their Article 8 funds, which has created a specific forum for discussion of the funds qualitative and quantitative ESG characteristics, and whether they are consistent with requirements and client expectations. This is an extension of their pre-existing risk and compliance processes. Where appropriate they have utilised their spheres of influence on companies via active engagement and stewardship activities.

**How did this financial product perform compared to the reference benchmark?**

An index was not designated as a reference benchmark to determine whether this financial product is aligned with the environmental or social characteristics that it promoted.

*[include note for financial products where an index has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product]*

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How does the reference benchmark differ from a broad market index?***  
Not applicable
- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***  
Not applicable
- ***How did this financial product perform compared with the reference benchmark?***  
Not applicable
- ***How did this financial product perform compared with the broad market index?***  
Not applicable

**Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Product name:** M&G North American Value FAM Fund  
**Legal entity identifier:** 635400NI1FETHUPUEU96

**Environmental and/or social characteristics**

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Did this financial product have a sustainable investment objective?**

**Yes**

It made **sustainable investments with an environmental objective:** \_\_\_%

- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** \_\_\_%

**No**

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 74.42% of sustainable investments

- with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

**To what extent were the environmental and/or social characteristics promoted by this financial product met?**

*The Fund promotes the use of an Exclusionary Approach and a Positive ESG Tilt (as defined below):*

*The Fund excludes certain potential investments from its investment universe to mitigate potential negative effects on the environment and society (“Exclusionary Approach”).*

*The Fund maintains a weighted average ESG rating that is either*

- 1. Higher than that of the equity market as represented by its investment universe; or*
- 2. Equivalent to at least an MSCI A rating, whichever is lower (“Positive ESG Tilt”).*

*In constructing a portfolio positively tilted towards investments with better ESG characteristics, the Investment Manager may nonetheless invest in investments across the full spectrum of ESG ratings. At an individual security level, the Investment Manager favours investments with better ESG characteristics where this is not detrimental to the pursuit of the financial investment objective.*

*No reference benchmark has been designated for the purpose of attaining the Fund’s promoted environmental and/or social characteristics.*

*The promoted environmental and social characteristics were generally met by all investments made for the Fund other than "Other" Investments. The alignment percentage indicated in the graphic below is tested against the Exclusionary Approach described below, showing the allocation between investments complying with the Exclusionary Approach and Investments which we deem as “Other” as we don’t consider they can be considered as aligned against the Exclusionary Approach as described in the precontractual annex, such as cash. The Positive ESG Tilt characteristic is not used as part of this alignment percentage test – instead, the Positive ESG Tilt is applied to all investments where data is available.*

**Sustainability indicators**

measure how the environmental or social characteristics promoted by the financial product are attained.

**How did the sustainability indicators perform?**
